A lot of people on and off Capi-tol Hill are unhappy about a pro-posal to expand the FBI's electronic surveillance of people who have not been convicted of crimes. Page 8.

It was not the first time was the 15th — that the alleged mastermind behind a plot to smuggle a U.S.-made computer system into the Soviet Union had reportedly received shipments of "critical technology" equipment. Page 16.

How do you get corporate managers to use those "typewriter-televisions" you put on their desks? A consultant gives his suggestions in Computerworld's new Microcomputers section. Page 65.

Jan. 3 was the first day of business for the deregulated AT&T, and AT&T Communications' chairman and chief executive officer, R. Morris Tananbaum, showed off the new corporate logo before flag-raising ceremonies at national headquarters in Basking Ridge, N.J.

AT&T discounts CPE for users

By Phil Hirsch CW Washington Bureau

WASHINGTON, D.C. - AT&T last week began selling its entire base of installed terminals to its users at discounts of 10% to 20%. Beginning March 1, a company spokesman said, the discounted prices will be re-duced an additional 1% each month for a period of 15 months.

AT&T customers interested in buying terminal equipment presently on lease — known as customer premises equipment — should call their Business Service and Sales Center, the spokesman said. The center, which has the customer's equipment service record, will set a "ball-park price" immediately and call back later with a final price.

This procedure applies to systems containing 10 or fewer stations, the spokesman explained. A customer with 11 or more stations should call his marketing branch office. The

telephone numbers of the Business Service and Sales Center and the marketing office are on the customer's monthly bill.

Asked for samples of the discounted prices for customer premises equipment, the AT&T spokesman said that installed two-line, fourstation Comkey 416 terminals are being of-fered for \$1,489.50, 10% less than the price of the same equipment new. Two-line, six-station Comkey 416s were reduced 10% (to \$2,385 from \$2,650); the six-line, 10-station Comkey 718 was reduced 15% and now costs \$3,792 instead of \$4,461.

The spokesman noted that these prices are approximate. He emphasized that the dis-counted sales price of a particular terminal will vary widely, depending on such factors as its age and complexity. A formula has been devised for relating the terminal's age to its sales price, but the spokesman declined to See CPE page 2

Why Computerworld looks different this week

What's different about Computerworld this week?

Nothing — and everything. Everything you've found in Computer world in the past is still in the same place. The latest news is still right up front, and product news is still in the technical sections. The In Depth section remains in its convenient place, the center of Computerworld, and continues to provide longer, thought-provoking articles on a wide range of topics. The editorial section of Computerworld still follows the news section, giving our readers a forum for their insights and opinions.

But a lot is different, too. We've made the wealth of information in Computerworld easier to access. Because readers' jobs require them to absorb more information than ever before, we've added indexes throughout Computerworld help them find that information. We'll be using informational graphics - charts and illustrations — more than ever before to convey information quickly. The typeface of *Computerworld* is dif-

ferent this week, too. It's a classic newspa-

per typeface, designed for readability.

And to help our readers do their jobs even better, we've expanded our technical sections with columns by experts in specific fields and by users who have implemented workable solutions to their companies' problems, as well as with columns by Computerworld's own editors.

Something else is new, too added a technical section on microcomputers. Centralizing the increasing amount of news on microcomputers in corporate environments that Computerworld has been providing for the past year, the new section will be devoted to single-user and multiuser microcomputer systems, peripherals and software.

Because of the merging of office automation into the mainstream of data pro-cessing, the news contained in the former Office Automation section has been folded into the other technical sections. If you're looking for information on electronic mail software, for example, you'll find it in the Software and Services section; local-area networks are now covered in the Communications section.

world actually began more than a year ago, when our editors began to meet with groups of readers around the nation. After discussing the current state of the DP executive's profession and the time pressures he faces on the job every day, these readers asked us to continue giving them all the news we have been giving them, but to make it quicker and easier to get at.

Computerworld's updated look is the result of six months of work by Robert Lockwood, regarded as one of the foremost newspaper designers in the U.S. His credits include The Christian Science Monitor, Chicago Sun-Times, Allentown Morning Call, Philadelphia Bulletin, Dallas Morning News and Baltimore Sun, among others. The founder and first president of the Society of Newspaper Designers, Lockwood worked with a redesign committee made up of members of the Computer-world editorial and production staffs.

The updating of Computerworld represents our commitment to serve our readers' needs as they change. We think you'll agree.

AT&T plans high-speed data on voice lines

MURRAY HILL, N.J. - Computers will be able to communicate at high speeds over the same lines used for telephone calls when AT&T's Circuit Switched Digital Capability (CSDC) is implemented in more than 12 cities by the end of this year, the company

announced recently.

Calling it a "giant step" toward. the totally integrated networks often referred to as integrated services di-gital networks (ISDN), the newly deregulated AT&T said CSDC will allow companies to send nearly all business communications over conventional phone lines. This data includes voice, graphics and data.

We're definitely moving toward an ISDN with this," an AT&T spokes woman said.

Developed by Bell Laboratories, CSDC will allow users to alternate between analog voice calls and digital data transmissions with the touch of a button. Speeds of 56K bit/sec will be achieved for data, AT&T claimed.

The system is now undergoing a trial at the New Jersey Bell switching center here. Initially, the capabilities of CSDC as a high-speed computer connection and as a bulk data carrier will be tested.

Local telephone companies will install the CSDC equipment, which can be interconnected by long-distance networks of various interexchange carriers

In addition to bulk data transfer, CSDC's 56K bit/sec digital transmission speed will also allow for teleconferencing, encrypted voice and highspeed facsimile at speeds of 4 sec/

CSDC consists of a software package for the Western Electric 1AESS switching system, additional hard-ware for the switch, modifications to the local telephone lines and some additional equipment at the customer

Switching from voice to data

To use the network, customers dial into the service with a five-digit code, then dial the site where the transmission is being sent. Once a call is established, the connection can be alternated between voice and data transmission, AT&T said.

When a customer sends data from a computer, hardware installed at the customer's office permits twoway digital communication over the wire pair running between the customer's site and the central telephone

CSDC allows simultaneous, twoway traffic by alternating the signals going in each direction and sending them at high speeds. To accomplish this, a time compression multiplexer is used to send and receive alternately bursts of data. Multiplexers are installed at both the telephone office and the customer's premises, according to AT&T.

Rather than send signals in both directions at 56K bit/sec, the multi-plexers send signals at double that rate, but alternate between sending and receiving more than 700 times per second. According to AT&T, this process make it appear to the user that data is moving in both directions simultaneously.

CPE

from page 1

Asked whether a customer could request AT&T to visit his site and examine his customer premises equip-ment before pricing it, the spokesman said some site visits will "undoubtedly" be made, but the AT&T representative will decide when they are necessary.

Customers who prefer to continue leasing their present equipment can do so for the next two years at specified rates. Until next March 1, according to the spokesman, 1983 will continue. After that date, the monthly fee will be based on a "national lease rate," separately calculated for each product category

The national lease rate is equal to either 70% of the highest state-tariffed charge in effect at the end of 1983 for that product line or the me-

dian of all state-tariffed rates in effect at the end of 1983 for that product line, whichever is higher. If a customer has been paying less than the national lease rate, his monthly charge after March 1 will be increased in stages over the following two years until it reaches the nation-

Customers who have been paying more than the national lease rate will begin paying the new rate March 1.

The selling and leasing of AT&T's embedded terminal base is administered by AT&T Information Systems, the telephone company's deregulated subsidiary. Under the AT&T divesti-ture agreement, all installed, leased AT&T terminals, along with the terminal marketing and service centers. were transferred from the erstwhile Bell operating companies to the subsidiary on Jan. 1.

Prior to last week, AT&T had said it would offer only about 75% of its embedded terminal base for sale this year. Under the terms of a plan proposed to the Federal Communications Commission early last year, the company could have waited until Jan. 1, 1986 to announce prices for the re maining 25% - which included popular models of electronic private branch exchanges, key telephone, modems and data terminals.

This scheme would have been hard on users because, without knowing what it would cost to buy their installed equipment, the users could not accurately determine whether to replace or retain that equipment.

Last November, however, the FCC ruled that AT&T, after posting a sales price for a particular type of embedded terminal equipment, would have to lease it for two years at the national lease rate.

Bug causes broadcast of nuke alarm

By John Gallant

HARRISBURG, Pa. — A mishap during the installation of a computerized emergency warning system at Pennsylvania Emergency Manage-Agency (Pema) headquarters here last week set off a nuclear attack warning that was broadcast to police and Civil Defense (CD) authorities in 41 of the state's 67 coun-

At 11:15 a.m on Wednesday, the following message came over tele-typewriters in police radio rooms and CD headquarters: This is an attack warning. Supplemental information will be provided when available. Take appropriate action.

Authorities in Lehigh County moved quickly, transmitting the message of imminent attack to emergency personnel and sounding fire sirens throughout the district. But Lehigh was the only county to carry that warning all the way to the public, according to Pema Press Secretary John Comey. Within five minutes of the nuclear attack alert, officials in the other counties received notice telling them to ignore the broadcast.

The faulty warning was the result of a botched transfer between floppy disks of "canned" emergency messages during the installation of a new computerized AT&T emergency tele-typewriter system, Comey said. "Somehow, the message was transmitted rather than duplicated," Comey said. 'For reasons unknown as of now, the nuclear attack warning was broadcast to the counties that were already on-line with the new system.

The system, scheduled to be fully on-line at the end of last week, will be part of the nationwide Emergency Warning System. Comey said that the nuclear alert message was caught before the statewide Emergency Broadcast System could be activated.

In Allegheny County, according to Police Inspector Leonard Jackson, officials had begun to notify emergency personnel when the disregard notice came through.

Nata raps Mountain Bell's Centrex offer

By Phil Hirsch CW Washington Bureau

WASHINGTON, D.C. - Mountain Bell Telephone Co. was accused last week of flouting the Federal Communications Commission's Second Computer Inquiry decision.

Mountain Bell's accuser is the

North American Telecommunciations Association (Nata), whose members include independent manufacturers of private branch exchange equipment that competes directly with Centrex.

The dispute goes back to last March, when Nata complained that Mountain Bell, along with other Bell operating companies, had begun offering "enhanced" Centrex equip-ment directly despite the FCC's Computer Decision II, which says that such services, if offered by telephone operating companies, must be marketed through separate, deregulated subsidiaries

The association has been trying to persuade the commission to issue a ruling that "Centrex service may not be expanded to provide enhanced

Among those involved in the controversy is the International Communications Association (ICA), a major communications users group.

The heart of Nata's petition is that Computer Decision II bars any addito network-provided Centrex services beyond those offered in 1980, when the decision was adopted, ICA told the commission last month. "Centrex service is a significant revenue source for local tele-phone companies," ICA said, adding that if the Nata proposal to freeze enhancement of Centrex were granted, it "would destroy the economic and operational viability of Centrex service... The severe dislocation of existing Centrex customers cannot be overemphasized. ... Moreover there is simply no way companies could have effective communication systems if the relief Nata requests is granted."

The latest chapter in this controbegan last week, when Nata and other interested parties submit-ted "reply comments" to the FCC covering issues raised in earlier filings. According to Nata, Mountain Bell is offering "Centron 300" service on a tariffed basis in Colorado and on an untariffed basis in Utah. Nata contends that Centron is an enhanced Centrex service that includes automatic route selection, multilevel facilities restriction and automatic overflow to dial-up facilities.

The association's filing includes a Sept. 23, 1983, letter from a Moun-tain Bell official, Paul B. Dorius, to the Utah Public Service Commission, which said, "It is Mountain Bell's position that since Centron is directly competitive with the offerings of nonregulated terminal equipment vendors, there is no legal or public policy basis for requiring that Mountain Bell's Centron offering be tar-

According to Nata, this position contradicts the one Mountain Bell has taken in its comments to the FCC
— that Centron is a "basic" service as that term is defined in the commis-

sion's Computer Decision II.
"At a minimum," Nata told the ommission last week, "Mountain Bell's inconsistent representations .. indicate ... considerable uncertainty regarding ... the parameters of the Computer [Decision] II as it pertains to Centrex." The association added that this same uncertainty underlies the enhanced Centrex offerings of other telephone companies.

ADR*/IDEAL puts you in command of the application backlog

IDEAL is the one system with everything you need to break the application backlog. IDEAL, under one interactive workstation environment, combines a relational DBMS, an active data dictionary and a fourth-generation language with facilities for managing the entire application lifecycle.

IDEAL is *the* standard in fourthgeneration application development systems. Of course, other systems have subsets of these facilities. But why should you settle for anything less than IDEAL?

IDEAL SOLVES THESE PROBLEMS

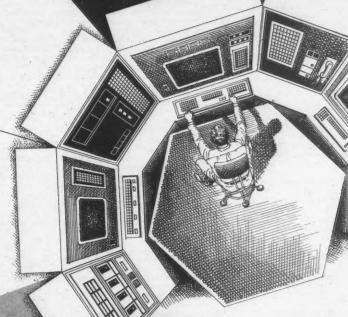

Large-Scale Applications
Production Applications
Departmental Applications
Application Enhancements
Online Retrieval
Online Transaction Processing
Dialog Management
Batch Reporting
Complex Updates
Design
Coding
Testing & Implementation
Documentation
Project Management

IDEAL DELIVERS THESE FACILITIES

Firm makes 'Ideal' choice after PL/I

WESTWOOD, Mass. — The F. W. Faxon Co., a library serials management firm based

here, prides itself on flourishing in a market that has been a graveyard for many companies. While more than 80% of its competitors have failed over the years, Faxon has achieved \$200 million in annual sales, with a steady 25% growth rate.

The company attributes much of that success to keeping up with the technological Joneses. Faxon installed its first computer in 1953. Now, with most of its library services on-line, the company runs 280,000 transactions daily on its IBM 3081 Model D mainframe.

Faxon acts as an intermediary between publishers and subscribers, most of which are academic and business libraries. Some of its more than 25,000 clients subscribe to 100,000 publications. Among the services Faxon offers are subscription management, on-line serials check-in, checks on undelivered copies, union list management for libraries that share resources and a routing ser-

Company expansion and the dramatic growth of the publishing industry in recent years led Faxon to seek an alternative to PL/I for its programming work. Following an evaluation that included Cullinet Software, Inc.'s IDMS data base man agement system (DBMS) and related application development facilities. Faxon late last year became the first user of Ideal, an integrated fourthgeneration application development system from Applied Data Research, Inc. (ADR) of Princeton, N.J. Faxon also purchased ADR's Datacom/DB DBMS, Dataquery, Datareporter and Datadictionary.

Although Ideal is oriented toward programmers, its first user at Faxon was an analyst with no programming experience. "I found that once you have detailed specs, the Ideal products lend themselves well to translation to the actual set of code," said Jeff Phillips, a section head in the technical division of Linx. Faxon's flagship serials management service.

Working with user David Brown, an electronic publishing consultant, Phillips coded the entire instruction set for a new "electronic yellow pages" service. Called Infoserv. the on-line, menu-driven service allows librarians to search for new serial sources by various keywords and topics and to request more information on subscriptions.

Infoserv "had an initial estimate of six months of programming time with two to three people," Phillips said. Using Ideal, Phillips and Brown coded the application in a little more

Screen painting and file definition were particularly simple, Phillips said. "We never had a screen written out or a format document."

Aithough he had no programming experience, Jeff Phillips (right) of F. W. Faxon & Co. developed a project in a high-level language with help only from user David Brown (left). Now Faxon is using the language on a much larger programming project under the supervision of Alan Exon (center).

Ideal is now being exercised on a more intensive project. The Horizon project is a "mammoth order process ing program for the Amsterdam ofaccording to Alan Exon, manager of advanced systems When completed this spring, Horizon will provide a full range of services worldwide subscriptions that come from its Netherlands office

Faxon is devoting nine full-time DP employees to the nine-month project. The goal is to write the program without using a single line of PL/I or assembler code. So far, Exon said, that goal is within reach.

Exon noted that Faxon achieve major reductions in code using Ideal, Dataquery and Datare-porter instead of PL/I programs. Allowing for reports that users can write themselves and programs not needed by the Amsterdam office, he estimated that 100,000 lines of Ideal code will be needed to provide roughly the same functions as two million lines of PL/I.

Because the final project will probably include 200 or more screens, Ideal's ability to prototype has been a lifesaver, Exon said. "The user doesn't have the patience to read 150 pages of specs," he said. 'Ideal is wonderful for producing panels very fast. This project would be extremely difficult to create without prototyping."
Exon called Ideal's full screen edi-

tor and compilation speeds fast" and praised the software's ability to execute several commands on a screen simultaneously. "You can change a country code and then immediately back out to the menu and go to another panel, all in the same transaction." he said.

The product also allows Faxon to do concurrent batch processing and real-time updating of Datacom/DB indexes, he said.

However, Exon admitted that Faxon has undergone some "growing pains" as a first user. "Programming Help panels can be tedious," he commented. "String functions are inadequate, and Ideal's [procedure definition language in some cases is verbose for the sake of clarity."

Another shortcoming of Ideal, ac-cording to Exon, is its lack of an interactive debugger. "Now you have to write your own exhibit statements, and when you debug you have to go back and recompile and relink.
The perfect solution would be a language you can run in interpretive mode for interactive debugging, could edit at any point and re-execute at any point.

Fledgling info center goes up with 'Peachpak II'

BATON ROUGE, La. The first user of Management Amer-Science Inc.'s (MSA) Execu-

tive Peachpak II micro-to-mainframe link has successfully implemented the software as part of a fledgling information center, though end users are currently allowed to utilize only the downloading capabilities of that package.

Announced at MSA's Interact meeting in September, Peachpak II was designed to accommodate on-line data base sharing between main-frames and the IBM Personal Computer. The package was said to allow for the downloading and uploading of mainframe files in MSA applica-tions for manipulation on any microcomputer application utilizing Software Arts, Inc.'s Data Interchange

The first user, Fidelity National Bank here, has operated Peachpak II in a test environment since mid-October and in full production mode since early December. According to Glen Smarada, assistant vice-president and programming manager, Fidelity is using the package on two IBM Personal Computers in the bank's Accounting Department. The micros are linked to Fidelity's IBM Model Group 2 mainframe through a coaxial network utilizing Technical Analysis Corp.'s Irma

Smarada said the decision to go with the MSA micro-mainframe link was a natural outgrowth of the DP department's goal of helping end us-ers utilize "their own data." Early in 1983, management implemented policies on microcomputer acquisition and use and created an information center that has since attempted to standardize hardware and software selection throughout the organization. Through the information center, Fidelity purchased 25 micros, most of them IBM Personal Computers, and the first version of Executive Peachpak.

'We run several MSA applications

on the mainframe, including human resources, fixed assets, accounts payable and their financial pack-Smarada said. "We wanted something to interface with their financial package, and Executive Peachpak, which we installed in April 1983, was an exact match."

While the original version of the software resided only on the micro, Peachpak II required, in addition, the installation of several host programs to accommodate the data base sharing function, an undertaking that, Smarada said, was "quite simple" with MSA's assistance. More impor-tant, he said, users have had little trouble learning to use the system.

'Users used to have to take information from a variety of reports and load it into spreadsheets," Smarada said. "Now they can just download that data directly into the micro applications. That has saved these people quite a bit of time. Also, that capability has made them realize the many additional things they can do with the information available. People are producing things that were just 'blue-sky' before.'

Fidelity's users are currently employing only two microcomputer applications with Peachpak II — MSA's Peachcalc spreadsheet and Lotus Development Corp.'s Lotus 1-2-3 spreadsheet package. The MSA mi-cro-mainframe link allows data to be downloaded directly into those applications without the need for a reload at the micro level. Also, "all security is handled on the mainframe level."
Smarada said. "You have to utilize the same passwords you would on a terminal. We were very concerned about security, but we're finding it to be more than adequate."

That concern for data security is one of the factors behind Fidelity's decision not to allow any uploading of data to the mainframe. "We want users to become familiar with the re-

trieval aspects of the system first."
Smarada said Fidelity may begin to utilize Peachpak II's uploading capabilities in the near future. The bank also plans to expand the use of micros to its 17 branches and to allow users in the Human Resources Department to take advantage of Peachpak II within the next year

IBM picks Comshare DSS for Info Center Seen as endorsement of 'System W'

By Paul Gilli

ANN ARBOR, Mich. — Comshare, Inc. last week announced a two-year "complementary marketing" agreement with IBM, whereby IBM will recommend Comshare's System W and Micro W decision support system (DSS) software for use in IBM Information Centers. It is the first time IBM has concluded such an agreement with a DSS vendor.

While both companies stopped short of calling the deal a joint marketing agreement, sources said the announcement amounts to an endorsement of System W by Big Blue.

Under the terms of the agreement, IBM and Comshare field representatives will conduct joint sales calls on customers who are interested in DSS, a Comshare spokesman said. IBM sales representatives will also refer interested prospects to Comshare for DSS applications rather than referencing three alternative vendors, as has been the company's practice in the past. However, IBM will continue to recommend alternative vendors if the customer requests that information, an IBM spokeswoman said.

The agreement also provides for IBM and Comshare to work together on future enhancements of System W to support new IBM hardware and software. Comshare will have full responsibility for providing, installing and supporting System W and will offer education and custom programming services for the software, Comshare said.

'We are their experts'

"We are their [IBM's] experts in decision support," said Richard L. Crandall, Comshare's president.

"It's the biggest thing we've ever done," he added. "The DSS market has been as confused and factionalized as the personal computer market was before IBM came in. People want leadership, and IBM is provid-

ing it."
But an IBM spokeswoman emphasized that the deal should not be construed as a joint marketing agreement or an endorsement.

"For one thing, we are not marketing System W. The reps will go together to sales prospects." she said. "We also do not endorse other vendors' software products."

Major stop for Comshare

However, the deal will clearly be a major boost to Comshare, which introduced System W as packaged software just over a year ago. "It's a meteoric rise, a true success story," said Len Bergstrom, vice-president of Real Decisions Corp. in Stamford, Conn., which publishes a DSS report. "We've been watching System W for a long time. It's always been presented and packaged very well. We look at it as being very successful."

Bergstrom added that users will be the "real winners" in the wake of the

Bergstrom added that users will be the "real winners" in the wake of the agreement. "IBM's endorsing DSS will give it some momentum," he said. "We see a lot of clients wanting bundled packages. And the DSS concept is very well tied to the Information Center concept."

While admitting that he was "en-

vious" of Comshare's success, a spokesman for Execucom, Inc., which markets the IFPS DSS, downplayed the significance of the deal. "I sum it up as a nonagreement," said Gary Greenfield, Execucom's vice-president of technology. "The [IBM] salesmen are not getting any commission; they're just being told to recommend [System W]. In two months it'll be as if [the deal] never existed."

Greenfield pointed to the fact that IBM will continue to offer IFPS on its Information Network remote com-

puting service as a mitigating factor. "The System W agreement doesn't make System W a product of IBM," he said. "It also doesn't preclude IBM salesmen from recommending IFPS."

salesmen from recommending IFPS."
Bergstrom agreed. "The question is whether IBM is going to hold together on this. I'm not sure if this is an exclusive agreement, and there may be others in the works;" he said. "We've seen IBM salesmen recommend IFPS before."

The IBM spokeswoman said that the Comshare agreement was con-

cluded with IBM's National Accounts Division (NAD), which is separate from IBM Information Services, an independent business unit that includes the Information Network. She said the NAD agreement was different from the Information Network's agreement with Execucom.

The price of System W ranges from \$75,000 to \$110,000. Micro W licenses for \$1,000 for each copy, with quantity discounts available. Comshare is located at 3001 S. State St., Ann Arbor. Mich. 48104.

Franklin settles copyright dispute with Apple

Agrees to pay \$2.5 million, use own operating system

By David Myers CW New York Bureau

NEW YORK — Franklin Computer Corp. last week gave up its highly publicized legal battle with Apple Computer, Inc. over the copyrightability of operating systems and of computer programs embedded in read-only memory (ROM).

read-only memory (ROM).

At a hastily called news conference here on Wednesday, Franklin President Avram Miller announced that his company, a maker of Applecompatible microcomputers, had agreed to pay Apple \$2.5 million to settle the dispute. In addition, Franklin agreed to accept the validity of Apple's copyright claim on its operating system software and to stop copying the Apple programs.

In accepting the settlement, Miller said Franklin was accepting "as law" the September decision of the Third Circuit Court of Appeals, which ruled that copyright protection extends to operating systems as well as to applications programs [CW, Sept. 121]

The appeals court decision had overturned an earlier lower court ruling that denied an injunction against sales of the Franklin ACE series of microcomputers.

Question remains unresolved

The settlement also means that Franklin has dropped its plans to appeal the case to the U.S. Supreme Court. As a result, the question of the copyrightability of ROM-based programs remains unresolved, according to legal experts contacted last week by Computerworld.

"One of the reasons we wanted to settle wassthat we felt we were in a lose-lose situation," Miller said. "The longer we pressed our case, the more we felt we would hurt not only ourselves, but Apple and the software industry."

In Cupertino, Calif., an Apple spokeswoman hailed the out-of-court settlement as "significant not only for us, but for other computer and software manufacturers who need [copyright] protection to design new technologies and products."

Not 'expressions of idea'

Franklin had originally argued that operating systems could not be copyrighted since they are not the "expressions of an idea" required by convright law

The company contended that the silicon chips holding the operating programs are useful devices rather than "expressions" and thus cannot be "understood."

As part of the settlement, Franklin has been given until April 1 to stop manufacturing computers with software copied from Apple. After then, the Cherry Hill, N.J.-based vendor can sell Apple-compatible boxes only with an operating system of its own devising.

Miller said Franklin had decided to give up its case against Apple, even though it had asked the U.S. Supreme Court to hear arguments from both sides, because the company is close to bringing its own operating system to market. "If we felt we couldn't do that, we wouldn't have settled," he said

Miller was vague, however, when asked when the market could expect the Franklin operating system. And he would disclose neither the cost nor the time spent to develop the new operating system code.

Asked how the Apple and Franklin operating systems would differ, he replied that Franklin's operating system "implements the same functions [as Apple's] in a different code." He declined to elaborate.

In Cupertino, the Apple spokeswoman said her company had not yet studied the Franklin operating software, but noted that the out-of-court settlement provides for arbitration of future copyright disputes between the two firms.

Neither she nor Miller, however, would say anything more about the arbitration process.

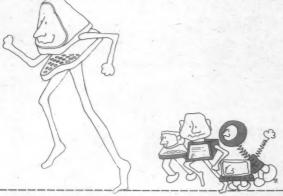

'We'll still be competing'

Asked if he considered the settlement a defeat, Miller replied, "I'll trade a legal victory for a victory in the market. We'll still be competing with Apple — just not in court."
Miller said the \$2.5 million his

Miller said the \$2.5 million his company agreed to pay Apple is "something I'd rather not spend, but it's not a financial drain" on the firm. A source close to the micro vendor said Franklin had set aside as much as \$5 million of its recent \$11 million private fund-raising issue to cover the cost of any settlement with Apple.

Asked if Franklin had thus gotten off cheaply, Apple's spokeswoman declined to comment.

FOR VAX' RESOURCE ACCOUNTING, PACS IS AHEAD OF THE PACK

The competition isn't even close. PACS is so good, it's the **only** resource accounting package in DEC's™ EAS library. Here's why:

- Flexible billing algorithms
- User budgeting and port speed accounting
- EZLOG™ for true 3-level reporting by account, project and user

Portables on planes under probe

By Lynn Habe

WASHINGTON, D.C. — A federal advisory committee for the airline industry has begun studying whether high-technology devices such as portable computers brought on board an airplane interfere with the aircraft's electronic equipment.

electronic equipment.

The committee on "Potential Interference to Aircraft Electronics Equipment From Devices Carried Aboard" is a result of the first meeting of the Radio Technical Commission for Aeronautics (RTCA), held this past November. RTCA, a non-profit organization sponsored by government and industry, had been approached by Eastern Airlines to look into possible interference problems.

"In recognition of the fact that the airplanes themselves are getting more complex and heavily computerized, and these personal computers do represent a significant advance in state-of-the-art technology, we thought it was best to find out if there is a need for caution regarding their use in common operating areas on board the aircraft," explained Jim Ashlock, spokesman for Eastern Airlines. Eastern has banned the use of personal computers on board aircraft.

The RTCA plans first to look into how the passenger-operated devices affect the aircraft antennas. That testing will be undertaken by members of the airframe industry, according to Rod Jago, technical staff officer for RTCA and secretary of the special committee.

"Boeing [Co.] has volunteered, and we're asking McDonnell Douglas [Corp.] and Lockheed [Aircraft Corp.] to do some testing. We've also asked

some airlines to do testing. The Federal Aviation Administration [FAA] will be asked to do some testing on their 727," Jago said.

The second phase of testing will examine what type of radio frequency spurious emissions escapes from a variety of devices. (Interference caused by escaping radio frequency energy can be seen on a home television screen in a neighborhood where someone is operating shortwave radio equipment, for example.) Some computer industry representatives who attended the RTCA meeting, including Tandy Corp., Apple Computer, Inc. and Hewlett-Packard Co., volunteered to test computer equipment, according to Jago.

"One of the things that will hopefully come out of this study is a standardized type of procedure among airlines which will help not only the people who want to use these types of devices, but also the airlines themselves," Jago said. "We'll also be able to develop some kind of listing of acceptable and not acceptable devices when used under certain situations."

The committee made no recommendation to ban the use of carry-on personal computers aboard aircraft, although an interim recommendation to ban the use of portable computers during takeoff and landing was suggested.

"The committee felt that a ban would be premature because at the present time we really don't have any documented, first-hand evidence that there is a problem," Jago said.

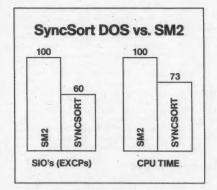

The FAA does ban the use of transistor FM radios on planes, because the band frequency on some FM devices is close to the aircraft's communications band.

IN-LAWS

Smile, IBM.
New SyncSort DOS
is the perfect
mate for your
4300 series!

Call (201) 568-9700.

Meet our new DOS/VS(E) release.

High performance computer without high performance sort program like bride without groom-expectation without the fulfillment.

-Old Chinese Proverb.

You say you just got this brand-new 4300? It's got big blue eyes, great price-performance curves and nifty disk drives? Now you're thinking about marrying it to IBM's 5746-SM2 sort program?

Well, don't do it pardner! The groom is definitely too old for the bride. Like IBM's other DOS sorts, SM2 is a hangover from an older generation of sorting technology.

There's only one sort around that's really fit for the hand of a glamorous new 4300 computer. And that's the latest release of SyncSort DOS. It's perfect for DOS/VS(E) and its new Fixed Block Architecture and VSAM type of data. Here's what SyncSort DOS can bring to the marriage:

- 1. BETTER PERFORMANCE. The first release of SyncSort DOS—back in 1978—incorporated many of the breakthroughs we made in OS sorting. Since then, in numerous releases, we've steadily cut the amount of resources that go into sorting. The new release carries on that old family tradition. Compared to SM2, SyncSort uses up to 50% less CPU Time and up to 70% fewer SIOs.
- 2. BETTER PROGRAMMER PRODUCTIVITY. SyncSort DOS has a host of features to cut the amount of programming time that goes into applications. You can often reduce the amount of time required for simple reports from five programmer days to one programmer day simply by using these features. They can:
 - select relevant records;
 - perform summaries on designated numeric fields;
 - · reformat records on output:
 - insert character strings;
 - convert numeric data to printable characters (including editing);
 - produce reports divided into logical pages with headings, pagination and dating—and much more.

3. BETTER CUSTOMER SERVICE. We have the smartest Tech Service people in the business and the best and fastest service. About 85% of all requests for service are resolved within 24 hours. Try us and find out for yourself.

So if you'd like to match that phenomenal new computer with the perfect mate, give us a call. We'll send over one of our matchmakers to give you a personal demonstration.

Once you've seen SyncSort DOS in action, we don't think it'll be long before you call us with a familiar request: "Play it again, VSAM!"

Plan would widen FBI electronic surveillance

WASHINGTON, D.C. - A proposal to expand the Federal Bureau of Investigation's electronic surveillance of noncriminals has fueled congressional efforts to develop legislation regulating the bureau's computerized criminal records system.

The proposal, now under consideration by the National Crime Information Center (NCIC) policy advisory panel, would expand the FBI-operat ed interstate records exchange network to include separate files on sociates" of certain types of criminals. These include drug traffickers, terrorists, foreign espionage agents and members of organized crime

The idea came from the policy board's planning and evaluation committee at the board's meeting in Denver last October. According to Board Chairman Fred H. Wynbrandt, the four proposed new files were among several suggested by the subcommit-

Wynbrandt said the ideas were put forward in "a brainstorming session" on ways to make the NCIC more helpful to law enforcement officers. He said another proposal, to include information on persons known to be associated with wanted persons, was "rejected out of hand" by the board as "beyond where the policy board wanted to go, way beyond."

Wynbrandt, who is assistant di-rector of the Criminal Information and Identification Branch within the California Attorney General's Division of Law Enforcement, said the board is sensitive to fears the NCIC might become too involved in intelligence-gathering on noncriminals. "We're concerned about privacy, se-curity and individual freedoms," he

Nevertheless, the proposal has alarmed Capitol Hill critics of NCIC operations, who last year unsucce fully opposed an FBI decision to turn what was originally a record system into a national surveillance system. Last April the Secret Service included on the NCIC system a file to monitor the activities of some 125 persons that the service fears may threaten the president and other protected

FBI authority questioned

At the time, Rep. Don Edwards (D-Calif.), chairman of the House Judiciary Subcommittee on Civil and Constitutional Rights, which has jurisdiction over the NCIC, insisted the new file was outside existing FBI statutory authority and required new legislation. The FBI disagreed and got the support of the full Judiciary Committee, which was convinced by arguments the file was necessary to protect the president.

Since then, Edwards' subcommittee and its Senate counterpart, the Judiciary Subcommittee on Patents, Copyrights and Trademarks, have been exploring the possibility of leg-islating guidelines for the system's record quality and for access to the system by non-criminal-justice per-

Congress' Office of Technology sment reported last year that a high level of record errors reduces the effectiveness of the NCIC. Access is also a long-standing problem, because in some states anyone can obtain NCIC records, meaning sensitive and possibly inaccurate data can be disseminated beyond the control of law enforcement authorities.

The Edwards' subcommittee plans to hold hearings on the new associate's file proposal in late February or early March. According to a subcommittee staff attorney, the proposal concerns Edwards, who attended the October policy board meeting, because the NCIC is authorized to collect, maintain and exchange only criminal data "that is a matter of public record somewhere.

Investigatory and intelligence

data, however, while legitimately maintained by individual law enforcement units, should not be available on a police information system, the attorney said. He explained, "It could result in a national surveillance system for exchange of information that is derogatory and that has not been tested in court and will in fact be used against a person.

Steven J. Metalitz, staff director of the Senate subcommittee, said the panel is aware of the proposal for the associate's file and will take a closer look at it if it progresses beyond the discussion phase. He said the sub-committee "would be skeptical about [the proposal] if there is a real danger of turning the system into one that is

more intelligence-oriented."
Surveillance uses of the NCIC, such as those proposed in October and the existing Secret Service file, are "inconsistent with other [record exchange] uses of the NCIC," he said.

Besides congressional opposition to the proposed files, there remains considerable work that must be completed before they can be implemented. Regional groups of the policy board, which represents NCIC users, are now considering the new files. If approved on this level, the proposal must still receive final board and FBI

NYC computerized tax program collects \$40 million from evaders

NEW YORK — A computerized tax program designed to catch up with individuals and businesses which have evaded city tax payments has resulted in the collection of millions of dollars here.

Operating since July 1981, the Taxpayer Automated Compliance System (Tacs), run by New York City's Tax Division, has aided in the collection of more than \$40 million from over 55,000 persons and firms.

By using a system that matches various types of files, the city has been able to detect evaders of commercial rent tax, unpaid business income tax and delinquent individual taxpayers. "We take existing city or state files and match them against our tax files," explained Umberto Dindo, director of Tacs.

The initial tax project, aimed at evaders of commercial rent tax, brought in approximately \$20 million alone from over 100,000 businesses. The City Tax Division employs 30

people to run the program and mails an average of half a million letters

per year, according to Dindo. "The initial match — the big one where we also had to create the files, the online system and so on — was costing about 10 cents on the dollar." he said. "But in the meantime, we've run the program over and over again, and we're down to an average of four to five cents on the dollar, which includes software, computer time, pos-tage and clerical time."

A spin-off of Tacs is to detect and follow up delinquent taxpayers, including those who have never filed returns. "Everything from the initial questionnaire all the way down to the warrant is being produced by that program," Dindo said.

The Tacs program and all the asso-ciated software were developed by the data processing division for the tax department. The tax department uses two IPL Systems, Inc. 4446 computers with 4M bytes of memory

"We are constantly developing new programs for the match because we have not done every match we would like to do," Dindo said.

CORRECTIONS

"Venture Unveils Service Merging Payroll, Personnel" [CW, Dec. 12] in correctly stated the name of one of the vendors involved in the agreement. The service is a joint venture between Chemical Bank and Information Science, Inc.

The correct price of "Computer Access Security Report" [CW, Dec. 12] is \$1,496. It is available from Federal Engineering, P.O. Box 2486, Gaithersburg, Md. 20879.

"' 'Valu Lib' Update Released for IBM 4300s, Series/36" [CW, Dec. 19] incorrectly identified the host computers required by Valu Lib. The product runs on IBM 4300 series and 30 series mainframes under IBM's MVS

and VSI operating systems.

"Maestro" is the correct spelling
of the product from Softlab Systems mentioned in the letter to the editor written by Robert Gregory [CW, Dec.

DEC pays \$3.2 million to settle GSA claims

Digital Equipment Corp. last week said it has paid the U.S. government \$3.2 million to settle claims lodged against it by the Government Services Administration (GSA).

The claims, in which the Justice Department alleged DEC had de-frauded the government in the sale of \$70 million worth of computers in the late 1970s, were settled without DEC's admitting or the government's proving any wrongdoing on the part of the Maynard, Mass., company. However, a government spokesman said the settlement does not diminish the allegations of fraud made by the Justice Department, even though the department will not pursue court ac-

"It was the government's as tion that the mispricing of data, which initiated our investigation, was the result of fraud," said Robert was the result of fraud, said Robert Ashbaugh, assistant director in the commercial litigation branch of the Justice Department. "At the same time, it could very well have been simply the kind of dispute that would involve a breach of contract.

We really gave up our right to prove or to say, with any degree of specificity, that [DEC] was guilty of fraud when we settled the case," Ashbaugh continued.

A DEC spokesman strongly denied the allegation of fraud, saying in-stead that DEC complied fully with its contractual obligations and requirements in its dealings with the GSA and other government agencies. "Perhaps more than anything, this

difficulty in dealing with the governent," the spokesman said.

matter points up the complexity and

According to the Justice Department's Ashbaugh, the \$70 million deal with DEC was part of a so-called multiple award contract, wherein the GSA certifies several vendors as ap-propriate and the various federal encies can then choose among the ertified vendors to fill equipment needs. Inherent in this procedure is the understanding that the government is entitled to most-favored customer status, guaranteeing it the best (lowest) price, Ashbaugh said. The GSA certifies that the government is getting the best price by scrutinizing purchase orders that the certified vendors have filled for other commercial customers.

It was the government's conten-tion that DEC did not furnish GSA all the paperwork it should have and. thus, submitted a price schedule that was higher than it should have been several million dollars higher.

The DEC spokesman said that the government was given all the documentation it had requested. But he said further that the nature of government procurement makes it virtually impossible to make the absolute best deal with government agencies.

For example, he said, the governnent demands that the shipping and transit insurance fees be paid for by the vendor. And government agen-cies can take up to six months to evaluate a machine before paying any part of the cost.

Under those conditions, it's hard to see how the government is going to be entitled to the best discount available," the DEC spokesman said.

Both DEC and Ashbaugh called the \$3.2 million settlement fair. The government would not say whether the payment included any penalty, characterizing it only as a lump sum pay-

Hitachi execs fined \$10,000

SAN FRANCISCO judge here has slapped a \$10,000 fine on two Japanese computer company executives who recently pleaded guilty to charges of conspiring to transport stolen IBM systems technology from the U.S. to Japan.

U.S. District Court Judge Spencer Williams fined Hitachi Ltd. executives Kisaburo Nakasawa and Takehiro Inoue for their role in a widely publicized trade-secrets theft case involving IBM and two of its Japanese competitors. The two, both 45, are employed at Hitachi's Kanagawa Works hardware development facility in Japan and hold the titles of general manager and department manager, respectively.

Nakasawa and Inoue were among nine Hitachi employees indicted during the summer of 1982 for participating in a Japanese scheme to steal numerous IBM trade secrets, including MVS/SP Version 2 source code and hardware designs for the 3081. To obtain the highly confidential IBM property — which was later recovered after the plot was exposed — Hitachi paid more than \$600,000 to Federal Bureau of Investigation agents posing as electronics black marketeers.

For-months after news of the ar-rests broke, the Hitachi defendants refused to answer summonses, but Nakasawa and Inoue recently entered their pleas in federal court.

Software aids crackdown on trade in stolen goods

LOUISVILLE, Ky. — Armed with a computer program that they developed themselves, a veteran police detective and a data processing department joined forces in a crackdown on thieves who sell and pawnshops that buy stolen goods.

The program that runs on Jefferson County Police Department's IBM Series/1 minicomputer lets Detective Bob Roby review in minutes data that once took hours, even days. The program has helped him recover \$55,000 worth of stolen property, clear 71 burglaries and make 58 ar

rests between February and December of '83.

On the pawnshop detail for the 600-member police force that covers the area surrounding Louisville, Roby hands out 3- by 5-in. cards asking pawnbrokers, jewelers and gold dealers to record the names, addresses, thumbprints and other data about people who sell them items. But last January, with the cards building up at the rate of several hundred per week, Roby sought help from Sgt. Phil Miller, who handles data pro-cessing and telecommunications for the department.
"I figured that if I had a computer,

I could serialize things and be able to go back and check out whether an in-dividual was selling a lot of one type of item, say, shotguns. Then we could check him out. I not only needed to know who was selling them, but needed the serial numbers, too.

"A lot of people don't keep serial numbers, so I needed a way to help them identify their stolen property, Roby said.

Days to develop

Miller used a Series/1 utility known as Prompt, produced by Mid/ American Control Corp. of Shelbyville, Ky., to write a program for Ro-by's project. "It wasn't that hard to do," Miller recalled. "It only took a couple of days to develop and a week

Now Miller and his civilian assistant, Janice Carter, transfer Roby's data from cards onto diskettes each week. The minicomputer produces a printout, now five inches thick, cross-referencing the data by item, seller's name and pawnshop.

Roby hopes to have his own termi-nal or IBM Personal Computer soon to input directly into and access the Series/1. "It's been more successful than we ever dreamed. We haven't even begun to scratch the surface with the computer. Other detectives are always asking for my information, and I know we'll be able to do still more once we get our own com-puter and get it loaded," Roby maintained.

Meanwhile, Miller reported that the pawnshop program is only one relatively minor task for the Series/ The computer's primary job is keeping crime, incident and activities statistics for the department and training records. A typical use is the study of selective enforcement, where the computer is used to show what impact increased police pres-ence has in a particular neighbor-

One program, now being tested, that Miller developed using Prompt will catalog sex crimes, sex offenders and violent criminals so detectives can identify potential suspects by inputting individual characteristics of a crime

The police department, which utilized general county data processing services until 1981, paid about \$65,000 for its computer and software. It now spends \$68,000 per year for data processing, compared to \$320,000 annually when it was part of the county network.

Array processors gaining appeal

PRODUCT SPOTLIGHT By Tom Henkel

Serious scientific processing was once a task reserved for big, wealthy users of very large

mainframes — oil exploration firms, defense organizations and weather-tracking institutions, for example

example.

Led by the booming medical imaging field, however, more users of superminicomputers and low-end mainframes have turned to standalone array processors to help them process computer-intensive applications like simulation, signal processing and computer-aided design.

The concept of array processing is not new. Scientists have known-for some time that certain computer applications, typically those involving large blocks of mathematical data, can be processed much faster than one calculation at a time can be processed. That is basically what an array processor does: breaks up a problem, or series of problems, and puts mathematical operations into groups, or arrays. With data in that format, a processor is capable of

performing multiple additions, subtractions or divisions at one time.

Array processors themselves are not new either, at least not by computer industry standards. Most of the major players in the stand-alone array processor market have been arrund for at least five years.

around for at least five years.

Array processors are architecturally similar to supercomputers, the multimillion-dollar processors that typically handle mammoth programs like nuclear research and meteorological forecasting. The major differences between supercomputers and array processors are cost and speed. Supercomputers currently can execute upward of 100 million floating-point operations per second (Mflops). Supercomputers recently announced by the Japanese firm Nippon Electric Co. (NEC), for example, boast a throughput of 300 Mflops; Control Data Corp. claims its top-of-the-line Cyber 205 can execute some 200 Mflops.

Array processors, in contrast, are much slower. Currently, the most powerful array processors, such as the top-of-the-line models from Star Technologies, Inc. and Floating Point Systems, Inc., offer a maximum throughput of some 100

Mflops. Most other array processors operate considerably slower, about 5 to 50 Mflops, according to Jeffry Canin, a technical analyst with the San Francisco investment banking firm of Woodman, Kirkpatrick & Gilbreath.

But if array processors are considerably slower than supercomputers, they are also considerably less expensive. Supercomputers typically cost upward of \$7 million. Array processors tend to cost less than \$300,000, with some units costing as little as \$5,000.

With the right application, array processors can improve the calculation of a general-purpose minicomputer by a ratio of 50:1 or 1,000:1, claimed Business Development Group, Inc., a market research firm in Stanford, Calif., in a recently released report on the array processor market.

But array processors are not for everyone. Like supercomputer users, the array processing community is a very sophisticated lot. Applications tend to be very specialized, and not much packaged software is available for array processors, Bob Hausman, vice-president of development at Star Technologies, point-See ARRAY page 12

Array processors found prevalent in CAT scanning

STANFORD, Calif. — Who's using array processors? A market research firm here believes it has identified the most likely markets for array processor use.

Perhaps the hottest market today for array processors is in medical imaging, according to Business Development Group, Inc., a market research firm here, which recently released a report titled "Array Processor Market Report."

The report noted that the array processor market has jumped from \$10 million in 1977 to about \$130 million in 1982. Hospitals, research foundations and laboratories use array processors for computer-aided tomography, more familiarly known as CAT scanning. This application uses the array processor to analyze X-ray data to generate pictures of body tissue.

Graphics artists also use array processors, as do textile designers and photograph printers, who employ array processors to manipulate patterns, photos or text to create a master plate for printing.

Oil exploration and service companies use array processors for esiminc exploration, well logging and electromagnetic surveys. Array processors are used to evaluate mechanical or acoustic signals sent into land masses or the sea. The application is similar to a CAT scan, but earth masses instead of tissue are being evaluated, the report noted.

Unear programming

Businessmen and production managers, specifically those involved with mining, timber harvesting and transportation, can make use of array processors for linear programing—manipulating complicated arrays of numbers to optimize yields. The array processor can evaluate variables including time, capacity and market prices, the report noted.

Array processors are used for applied research at various universities, foundations and government agencies. Since much research involves sophisticated image-or signal-processing applications, basic research is a catchall category for array processor use, the report said. The military is also a big user of

The military is also a big user of array processors for such applications as pattern recognition, cartography, robot-controlled ordnance and navigation systems. Array processors can also be used to evaluate satellite data and radar images.

Many organizations, including the government, banks, operators of private data links, point-of-sale networks and oil companies, would like to use voice processing. Array processors can help to secure data transmission and to encrypt and identify voices by manipulating signals, the report said.

In addition, array processors can be used for complex computer-aided design (CAD) applications, such ascircuit design. They can also be used for process-control applications such as monitoring many remote sensors See SCANNING page 12

"VisiCalc is a registered trademark of VisiCorp VisiCorp is not associated with Dynacalc. ""Dynacalc is owned by Dynasoft Corp. ed out. Many users prefer to develop their own software for array processors, he added.

Canin, however, said that while the amount of packaged software for array processors is miniscule when compared with, for example, packaged software for the IBM mainframe market or the microcomputer market, there are software packages available for popular array processors which offer a basic set of algorithms. Users can customize those algorithms to suit specific applications. Among these packages are Nastran, a structural analysis package, and Spice, a standard circuit design package. Both are produced by Macneal-Schwendler Corp.

Like the applications for supercomputers, most applications for array processors are developed in Fortran. Because Fortran is somewhat more difficult than the so-called "user-friendly" languages available for file-oriented processors, not everyone is capable of using an array processor.

But according to Star Technologies' Hausman, an entire corporation does not require access to an array processor. In fact, only some applications employ a sufficient level of computations to run efficiently on an array processor. Some applications can actually be executed faster on a standard commercial processor. Array processor users typically

Array processor users typically access the unit through a front-end processor, such as a supermin or mainframe. But Hausman noted some array processors can accommodate a microcomputer at the front end.

Some array processors can be configured with their own memory, while others share memory with the front-end processor. Sharing memory with the front-end processor boosts the speed of the array processor if it must frequently access information from the front-end processor, Canin said.

Since not all applications are suited for array processing, there must be some way to determine which programs should be sent to the array processor and which should remain in a file-oriented system. For some applications, the decision is easy, especially for the sophisticated users that typically use array processors. But for those cases in which the user is unsure whether the application will efficiently support array processing, Hausman said, there are precompilers, such as the Vast produced by Pacific Sierra, Inc., which help evaluate applications before submission to an array processor.

What makes a firm decide to buy an array processor? According to Lester Gerhardt, a computer scientist at Rensselaer Polytechnic Institute in Troy, N.Y., time is often the major criterion. Some applications are so complex and so computer-intensive that they take an extremely long time to process on a conventional mainframe or superminicomputer. If a firm has enough of those applications, buying an array processor is a logical choice. An array processor is often less expensive than adding the extra file-oriented processors to speed up processing significantly.

SCANNING

from page 11

and making production decisions and for nondestructive testing applications, the report noted.

What does the future hold for the array processor market? According to Business Development Group, decreasing costs for both minicomputers and array processors will make more minicomputer users willing to buy array processors. In addition, applications such as

In addition, applications such as CAD and computer simulation are becoming more popular. Since both applications require a high degree of computing power, more users of minis and low-end mainframes will find themselves forced into buying a stand-alone array processor to go along with their current systems.

The report costs \$1,500 and is available from Business Development Group through P.O. Box 3044, Stanford, Calif. 94305.

It was DP business as usual after Boston hotel fire

By James Connolly

BOSTON — Although a smoky electrical fire injured 65 people, caused \$500,000 in damages and cost millions of dollars in lost revenues, the data processing department at the Westin Hotel here barely missed a step.

The Jan. 2 fire disrupted the hotel's main and emergency power supplies and closed the building for several days at an estimated loss of \$1 million a day in revenues. But less than 24 hours after the mid-day fire drove 120 guests and hundreds of employees to the street, the data crucial to operating the "fully automated" luxury hotel — safely stored on diskettes — was being processed to meet payroll and end-of-month and end-of-year accounting deadlines.

Amid adversity, it was business as usual in the computer room. "We are very fortunate," said Systems Manager Dennis Nixon. "When the power went off, everything crashed. But I turned a key in a box on the wall for the backup power supply, and we were up again in no time at all.

were up again in no time at all.

"We did a complete back-off, and I took all of the software out in a box and brought it home with me for safekeeping for the night."

Nixon noted that his systems assisted in evacuating the hotel; rescucording to fire officials. The blaze

ers were armed with printouts, produced every four hours, indicating the names of guests and the occupancy of each of 700 rooms.

"A lot of people are intimidated by computers. I think that after this experience, they won't be anymore, at least not in this hotel," Nixon concluded.

Backup power at work

As electrical crews worked last week to restore power, front desk clerks shivered without heat in a lobby lit by emergency lights and an oil hurricane lamp, helping guests relocate and recover luggage the day after the fire. But five floors above in the administrative offices, Nixon's dedicated backup supply provided power for IBM and NCR Corp. systems and four table lamps. In addition, accounting department personnel moved in to use Nixon's power for calculators to complete their monthly and annual reports.

Nixon said he was not using several systems, partially because he was unsure how much power was available. But, he added, his main reason for idling much of the equipment was that there were no guests and four employees to convice.

and few employees to service.

The basement fire was caused by a short circuit in a switching room, according to fire officials. The blaze

CW Darks by I Coss

Workers shared only power source available after Westin fire.

burned cables for the regular and emergency power supplies. But the emergency supply for the computer center was independent of both central systems.

The 37-story hotel, which opened last June, uses two IBM System/36s, two IBM Series/1s and two NCR 2160 minicomputers. The systems not only handle administrative tasks such as payroll and accounting, but provide on-line service to the hotel restaurants, housekeeping department, front desk, reservations office and other departments.

There are more than 75 terminals located throughout the hotel, but only those in the computer center were operating during the power out-

Nixon said that the return to full operations would only mean running

daily audits for the various departments for the days they were closed and manually entering payroll information for maintenance workers and other employees who worked during the shutdown. "Actually, things worked out pretty well for us, because we can concentrate on the payroll and accounting without having the rest of the operations to worry about. We're very happy that we can pay the employees. That's a priority for the company," Nixon reported.

"We could have worked on the day of the fire if they had let us back in the building. I brought the diskettes with no, just in case we couldn't get back in for days. Then I could have gone to IBM to work, but that would have taken a full day just to configse FRE page 14

Attention DEC Mini/Micro Users:

Let MTI show you how U.S. Design's compact storage system can cut access time by up to 90% and give you the most megabytes for your buck.

It's plug compatible with LSI-11, PDP-11 and VAX, and supports RSX-11M, RSTS/E, RT-11 and DSM.*

MTI is an authorized distributor for U.S. Design Corp. Our expert field sales engineers provide on-site consultation to show you how this 42-pound desktop (or rackmount) storage system can increase error-free throughput for you.

Whether you buy, rent or lease, you'll find MTI is the one source for all the terminals, peripherals, systems, applications expertise and service you'll ever need. At good prices. Call MTI today and save.

Stories on networks sought

Computerworld is looking for a few good stories on data communications networks. A Feb. 27 Special Report on the subject is now in the making, and contributions are welcome until Jan. 16.

Contributed stories can take two forms: tutorials that are not product-specific and cover a trend or direction in data communications networks; or case studies of specific users who have solved specific business problems with a certain type of data communications network

These articles should be between

four and six double-spaced, typewritten pages in length. Authors are encouraged to include any camera-ready art or black-and-white photographs.

Authors should include with all submissions a very brief biography (name, title, company, city, state) and a telephone number at which they can be reached.

Articles should be sent to Jim Bartimo, Senior Editor/Communications, Computerworld, Box 880, 375 Cochituate Road, Framingham Mass. 01701.

Data base built to help Salvadorans gain asylum

By Peter Bartolik

WASHINGTON, D.C. - Residents of war-torn El Salvador who seek political asylum in the U.S. and who need the high level of proof it requires can now turn to a computerized data base for assistance.

The data base, jointly compiled by two private, nonprofit organizations here, helps Salvadorans obtain documented evidence that their forced return to El Salvador would subject them to human rights violations and persecution there.

The data base was recently estab-lished by the Center for National Security Studies and the Political Asy lum Project of the American Civil Liberties Union (ACLU) Fund of the National Capital Area

The Documentation Center, ACLU Fund spokeswoman Maria Boza said, has three goals: to provide data needed by attorneys representing Salva-dorans who are seeking political asy-lum in the U.S.; to assist those engaged in the debate over legislative initiatives to provide Salvadorans with temporary legal protection against deportation; and to make documentation of human rights abuses in El Salvador publicly available.

"The level of proof demanded of asylum applicants by the Immigra-tion and Naturalization Service, the

Immigration Courts and the State Department has always been high, Boza said. "Asylum applicants have been required to present specific evidence corroborating that they have a particularized and individualized fear of persecution if returned to

During the first three months of 1983, according to Boza, only 31 requests for asylum were granted to Salvadorans, while 1,426 requests ere denied

The ACLU Fund began its Political Asylum Project last April. Paper indexing of the materials did not work out too well. Boza said, so in July the Project and Center for National Strategic Studies joined up to compile the data base on the center's Televideo Systems, Inc. TS800 microcomputer, using Ashton Tate's Dbase II data base management system.

Two principal files have been compiled. One contains a list of more than 18,000 Salvadorans who have either been killed or imprisoned in El Salvador.

The second file is an index of more than 1,000 documents, such as gov-ernment reports and cables, reports in periodicals and reports by the ACLU Americas Watch.

The Political Asylum Project is located at 122 Maryland Ave. N.E., Washington, D.C. 20002.

FCC rules on marketing satellites, network interfaces

By Phil Hirsch CW Washington Bure

WASHINGTON, D.C. AT&T market receive-only satellite earth stations through its deregulat-ed, separate subsidiary, the Federal Communications Commission ruled last month. The commission also decided that the newly divested Bell operating companies must similarly market wideband channel interfaces through separate subsidiaries.

Both actions are related to an escalating battle between the carriers and their competitors, which seems likely to affect the quality and diversity of future "smart network" services. The key issue is who will control and supply the interface between a user's terminal and the growing number of high bit-rate channels being offered by the carriers.

These interfaces are usually referred to as channel service units

(CSU) or network channel terminat-

ing equipment (NCTE).

The stakes in this battle are high for users as well as vendors, since the channels are the forerunners of the integrated services digital network ISDN) which, within the next five to 10 years, is expected to carry virtually all of the digitally encoded information generated by U.S. business communications users.

Under the FCC's Second Computer

Inquiry decision, AT&T is required to market terminal equipment (custom-er premises equipment or CPE) through a deregulated separate subsidiary.

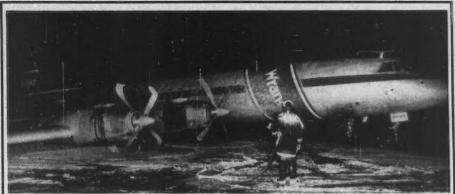

But the company can apply for a waiver of this rule, as it did recently in the case of receive-only earth sta-

The FCC rejected that application because AT&T allegedly failed to show that denial of the waiver request would deprive customers of service or cause them to incur unrea-sonable costs. The commissioners thus reaffirmed their position that waivers will be granted only on narrow grounds.

Last summer, the FCC decided that wideband channel interfaces are CPE and must be offered by AT&T through its deregulated subsidiary, AT&T Information Services

The commission also decided that the separate subsidiary rule applies to CPE marketed by the divested Bell operating companies, subject to certain modifications. (Notably, already installed NCTE and CSUs can be leased and maintained by the regulated side of each operating company.)

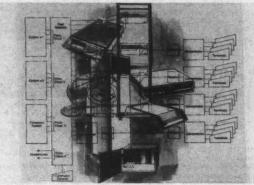

Last month, the FCC rejected several operating companies' argu-ments which sought to reverse these

A Canadair CL44 turbo-prop cargo plane carrying 24 tons of computer equipment made a Year's Day at Boston's Logan Airport after its landing gear failed. Commerce rapped for licensing fugitive dealer

WASHINGTON, D.C. -- The alleged mastermind behind a foiled plot to smuggle a sophisticated U.S.made computer system into the Soviet Union had received 14 earlier ship-ments of "critical technology" equipment, U.S. officials revealed during a recent press conference held jointly by Defense Secretary Caspar Weinberger and Treasury Secre-

tary Donald T. Regan.
Anonymous "top Defense Department officials" quoted in The Washington Post late last month criticized the U.S. Commerce Department for failing to halt the 15 shipments to a West German national, Richard Mueller, who is still a fugitive from a 1979 federal indictment charging him with export violations [CW, Nov. 21, Nov. 28, 1983].

One part of the consignment con-Digital Equipment Corp.'s VAX-11/782 superminicomputer and other materials was displayed at a press conference last month following its return from West Germany; the other part of the consignment remains in custody of the Swedish authorities who intercepted it a week after the West German seizure.

ler 'under investigation'

Following the Weinberger-Regan press conference, an unidentified Defense Department official reportedly

tion by one part of the Commerce Department, while the other part of the Commerce Department was issuing licenses" to allow an unidentified New York-based computer broker and export company to purchase the equip-ment and ship it to the South African firm controlled by Mueller.

The official was quoted by The Washington Post, which said the official and others made comments under protection of anonymity during a "background briefing."

Dan Landa, a spokesman for the Commerce Department, said his department had no response to the allegations. Explaining export licensing procedures, however, he noted that licensees must agree upon issuance that the destination on the license is the end-user destination. An end user desiring to "re-export" equipment ship it on to another country - must obtain permission from the Commerce Department.

mention that because that's what happened in the South African case," Landa said. "They had no right to re-export that [shipment]," Landa said.

The Defense officials quoted by The Post also reportedly said the Defense Department will soon place before the National Security Council a plan to stop the export of sensitive goods to communist nations.

During the cabinet-level news con-

ference, Secretary Regan said the U.S. Customs Service, with the assistance of the West German authorities and the cooperation of the Defense Department, "prevented what would have been an espionage coup by the

'Legal or lilegal means'

The Soviet Union, he charged, will go to great lengths to obtain high-technology equipment. Whether they have to use legal or illegal means, the [Soviet Union] will do what is necessary because it does not have the wherewithal to develop comparable technology."

Secretary Weinberger said the VAX-11/782 would help the Soviets "produce vastly more accurate ... and more destructive weapons." Defense officials reportedly have said they suspected the Soviets intended to use the equipment to operate a design and manufacturing facility for production of high-speed integrated circuits.

Government officials have said the equipment can be used for a number of military applications, includ-ing simulation of missile-target encounters, logic design of military systems and "war gaming," among

High-tech smuggler still at large and still very much at work

On Aug. 25; [1981], the U.S. Department of Commerce banned Richard Mueller and his company, Santteriand, from trading with U.S. companies until May 31, 2001. Mueller, it seems, had gotten caught exporting sophisticated computerized drafting systems to the Soviet Union.

It was not the first time Mueller had been implicated in illegal high technology shipments to the Soviets. It may not be the last time ei-

- Computerworld, Sept. 14, 1981

Those prophetic words by freelance investigative reporter Christopher Simpson, part of a series of reports on high-tech smuggling wrote for Computerworld in 1981, came true during the last two months of 1983. With more than 17 years of his "probation" still to be served, Mueller was implicated as the mastermind behind an attempt to smuggle a top-of-the-line Digital Equipment Corp. VAX-11/782 superminicomputer into the Soviet

Mueller had previously fled the U.S. following a federal indictment handed down in 1979 that charged him with violating export regula-tions and exporting a complete assembly line for mass production of microcomputers to the Soviet Union. Iwo officials of a Sunnyvale, Calif., firm, II Industries, were convicted on charges related to the case.

Despite that indictment, Computerworld reported in 1981, "no sanc-tions were imposed against [Mueller] until the end of August [1981], and he continued to trade with U.S. compa-

erce criticized

Last month, it was reported in The Washington Post that top Defense Department officials strongly criticized the U.S. Commerce Department for allowing 15 shipments, including the VAX-11/782, to be exported to a South African firm controlled by

The firm, according to those anonymous Defense Department officials, was under investigation by one part of the Commerce Department, while the other part of the Commerce Department was issuing licenses." The

Commerce Department declined to respond to the charges.

With the U.S. Congress still mired in controversy in attempting to re-new the Export Administration Act [CW, Nov. 21, 1983], the current investigation into Mueller's dealings seems certain to play a key role in the Defense Department's attempt to gain greater discretion over the granting of export licenses. Export regulations remain in effect, despite the impasse in Congress, because of emergency powers invoked by President Reagan when the act expired late last year

Although Mueller was well known to the Commerce Department as a result of two illegal export cases in the 1970s, the Customs Service revealed last month that he had received a total of 15 shipments of U.S.-manufac-tured "critical technology equip-ment" worth a total of \$7 million including the VAX.

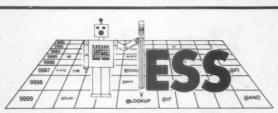

None of these shipments remains in South Africa," customs officials

A customs investigation in South Africa revealed, according to customs officials, "that Richard Mueller, after making a sizable investment in commercial and residential real estate in South Africa, arrived there in January of 1983 and took up resi-

Through several intermediaries Mueller has established a number of shell companies in South Africa, beginning in 1979. These were funded through his Swiss holding companies and several Swiss bank accounts.

The customs investigation re-vealed that the millions of dollars worth of U.S. critical technology purchased by Mueller's firms from U.S. companies and exported to South Africa were funded through Swiss bank accounts

One of Mueller's "front compa-" Microelectronics Research Institute of Cape Town, South Africa, according to customs officials, was the importer of equipment "which was allegedly to be put into civilian electronics research by that firm," but was transferred to another "front company" that transferred it on paper to a Mueller subsidiary in

Electronic Spread Sheet for VM/CMS & MVS/TSO - Not Just Another CALC -

Powerful - Spreadsheet size is limited only by available virtual storage. ESS easily handles spreadsheets with thousands of rows and/or columns.

Proven - Already in use at over 70 installations

Compatible - ESS accepts the same commands as VisiCorp's VisiCalc® program for microcomputers. A person familiar with VisiCalc® can be using ESS productively in minutes. In addition, ESS can load and save files in

High Performance - Assembler language code and sophisticated storage management techniques give you fast response, even with very large

Easy to Install - Just load the ESS program. No additional program products or languages are required.

Cost Effective - ESS gives all your users access to personal computing capabilities for just \$220 per month. Compare that to the cost of buying hundreds of microcomputers.

Questions? - For more information about ESS, or to arrange a 30-day free

Quality assurance shows top growth in corporate DP

By Patricia Keefe

ORLANDO, Fla. - Quality assurnce is the fastest growing function in corporate DP, recording growth of 55% in 1983, according to an international survey by the Quality Assur-ance Institute (QAI). Additional growth of 33% is projected by June

The survey indicated that almost one-third of quality assurance groups were formed at the request of senior management, which is recognizing that need is making this function that neverther the content of the second of the sec tion the top growth area in corporate DP, QAI added.

The survey results represent the responses of 135 organizations from a spectrum of fields, approximately third more responses than in 1982. The responding companies were either members of QAI or attendees at the third annual DPMA Quality Assurance Symposium.

Other changes between 1982 and 1983 noted by the survey on DP quality assurance, which the QAI defined as being responsible for establishing and measuring a process that produces quality computer systems, include

A \$25,000 increase in the maximum salary offered quality assur-

ance managers in 1983 compared with the 1982 maximum of \$40,000.

An average salary in 1983 for quality assurance managers of \$42,700, representing approximately

a 10% increase over a year ago.

An average age for the quality assurance function of two years and seven months, up from less than two years 12 months ago. However, the staffing ratio of full-time quality assurance professionals to systems an-alysts and programmers is less than 1:100 in 80% of the organizations that responded to the survey. "The less-than-desirable staffing ratio is attributed to the newness of the function," QAI said.

The survey also found the same top three responsibilities for quality assurance managers in 1983 as in 1982: certifying systems prior to production status; enforcing DP stan-dards; and reviewing and certifying development and documentation. Increasing in importance were developing system and programming standards, developing control standards and training.

The survey found that reporting hardware/software problems and monitoring adherence to in-place security measures reduced in importance to these managers.

For 53.3% of all the respondents to See GROWTH page 18

Quality assurance success seen linked directly to exec support

ness of the quality assurance function in an organization is directly linked to the support - or lack of support — from DP management, according to the "1983 Survey of EDP Quality Assurance" by the Quality Assurance Institute (QAI)

'Quality assurance managers believe that they must have strong [DP] management support to be successful," QAI said.

The strengths and problems of quality assurance vary significantly from company to company and industry to industry, but overall, have not changed significantly since 1982, according to the international survey. The greatest national survey. The greatest strengths associated with DP quality assurance include knowledgeable and motivated staff, quality and respectability of staff, improved

productivity and independence.

The problems considered most serious by the organizations responding to the QAI survey include:

- Lack of management support. Lack of skilled personnel.
- Lack of acceptance.Lack of standards and proce

Time limitations.

Getting credibility.

About half of all quality assurance groups listed management support of recommendations as the most important practice for enforcing quality, the survey said, under-lining the importance of management support. Its respondents' two most popular methods for enforcing quality are controlling the source or object code library and stopping low-quality projects from continu-ing until corrective steps are taken.

The survey also found that the basis for evaluating quality in 42% of the organizations polled is compliance to standards. Thirty-eight percent use professional judgment, and 12% use mathematical methods.

Also cited as important to the quality assurance function is a knowledgeable and high-quality staff. Although the survey found that most of the quality assurance personnel come from DP, QAI said the function "requires skills other than data processing."

These skills, in order of impor-tance, include verbal communication, written communication, systems analysis, interpersonal relations, knowledge of business and interviewing, time management and business systems design.

Attention DEC Mini/Micro Users: MTI is one of Digital's Authorized Distributors.

That's why you can always lease or buy the latest DEC terminals and micros from MTI.

MTI is a full-service distributor. Our sales engineers will help you choose the most cost-effective equipment for your needs. Our ware-house staff will check out each piece of equipment thoroughly before it is shipped. Our service department will install your equipment and give you timely maintenance and service.

As one of the few Authorized Digital Terminals Distributors, MTI can give you the best of two worlds; terminals and microcomputers, based on advanced technology from the industry leader, and the expertise and service from applications specialists.

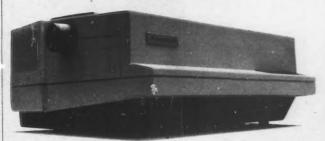

Whether you rent, buy or lease our equipment, you'll find MTI is the one source for all the terminals, peripherals, systems, applica-tions expertise and service you'll ever need. And all of this at prices that are very attractive and hard to beat. Call MTI today and save.

Dataproducts Daisywheel Printers

Akers to keynote NCC

LAS VEGAS - John F. Akers. president and director of IBM, is scheduled to be the keynote speak for the 1984 National Computer Conference (NCC).

NCC '84 will be held here July 9-12 at the Las Vegas Convention Center; its theme is "Enhancing

Creativity."

Akers, elected IBM president and a director in February 1983, joined IBM in 1960 as a sales trainee. He is a former group executive of the data processing marketing group and the information systems and communications group. NCC is sponsored by several societies and institutions. They include the American Federation of Information Processing Societies, Inc. (Afips), the Association for Computing Machinery, the Data Processing Management Association, the Institute of Electrical and Electronics Engineers Computer Society and the Society for Computer Simu-

Conference fees are \$100 in advance or \$125 on-site, according to Afips, which is located at 1899 Preston White Drive, Reston, Va.

Videotex meet set for April

CHICAGO - The Videotex '84 International Conference and Exhibition, featuring information on mar-keting, products and technology from the videotex industry, will be held here April 16-18 at the Hyatt Regency Hotel.

Sponsored by London On-Line, Inc., the conference theme is "Widening the Spectrum."

According to the conference organizer, it will feature three simultaneous conference sessions.

Among the sessions will be newly instituted "talk shops" to enable par-ticipants to follow the program elements specifically geared to their

business interests.

"Videotex — The Full Picture"
will cover basic aspects of the videotex industry, according to the confer-

ence organizer.
"Industry Issues and Developments" will focus on major strategic and technical issues

"Talking Shop" includes more informal sessions where delegates will be able to exchange ideas on a variety of topics.

The registration fee is \$695. After Feb. 29, the fee is \$795, the organizer said. London On-Line is located at Suite 1190, 2 Penn Plaza, New York, N.Y. 10121.

GROWTH

from page 17

the survey, the average number of reviews per system development pro-jects was one to three; when that question was asked only of the DP organizations that responded, the per-centage rose to 75% for one to three reviews. This review process typically accounted for 2% to 5% of the project cost among the combined organizations (44.1%) and by 50% of responding DP organizations.

After the review, reports are issued by only 69% of the overall respondents (60.7% of the responding DP organizations).

In addition, 84% of the survey respondents do not cost-justify their function to management. Of the respondents who represented DP organizations, 67.9% do not cost-justify their function to management.

The majority of the quality assurance groups report to either the se-nior DP manager or the manager of DP support/planning. Less than 20% report to the manager of systems and programming and those that do "ap-peared to be the least effective in promoting quality data processing," the survey report said.

Quality assurance was found to flourish in organizations using formal design and maintenance methods. Approximately three-fourths of the organizations having quality as-surance groups use formal system development life cycle methods, al-though close to half of the system development life cycle methods used

were developed in-hous

Moreover, about half the quality assurance groups use a formal review process, such as review checklists, to ensure that quality is built in during the developmental process. Most often, survey respondents (52.8%), combined a review team with a quality assurance staff member to conduct these reviews.

During the review, over three-fourths of the quality assurance analysts responding use probing, the survey found.

Approximately one-half use ques tionnaires, 20% use checklists and 12% reported performing part of their analysis using software.

Copies of the survey are available for \$25 if payment is included with the order (\$35 invoiced). Copies are distributed to QAI members at no cost from Quality Assurance Insti-tute, which is located at 9222 Bay Point Drive, Orlando, Fla. 32819.

M PC/OWNERS:

ETS YOU FIND A A HAY STAC

Now, in a single package, hard disk storage and file-oriented backup: Alloy's PC-STOR®

The remarkable new PC-STOR combines the latest Winchester hard disk technology with the industry's finest file-oriented tape backup. With this system you can locate, retrieve and re-position backup data quickly, precisely and easily. The PC-STOR makes recovery from awkward floppy disk or streaming backup systems a memory of the past for users of IBM or IBM-PC compatibles.

The new Alloy Winchester hard disk comes with 35 megabytes of formatted storage, is 4 times faster than the IBM-XT system, and is especially designed for ease of use. It can be purchased as the PC-DISC ⁽⁹⁾ a hard disk system without backup, or as a PC-STOR, a hard disk with file-oriented tape backup.

If you already have a hard disk system, you should add file oriented tape backup: Alloy's PC-BACKUP®

For the ultimate in hard disk and hard disk backup systems, find out more about Alloy's advanced product line, today.

INTERNATIONAL REPORT

CW INTERNATIONAL NEWS NETWORK

AUSTRALIA

NORTH SYDNEY — Austnet Electronic Funds Transfer (EFT) Services Pty. Ltd.
has established an on-line
link with the U.S. 'Visa automated cash disbursement
system. According to Austnet
EFT's technical director,
Chris Reilly, the company is
the first EFT service outside
the U.S. to link into the Visa
system, enabling Visa card
holders from anywhere in
the world to withdraw cash
instantly from Visa automated teller machines.

PERTH - A records management system that reportedly allows organizations to catalog and file all of their incoming and outgoing documents has been jointly devel-oped here by Computer Power and the Systems Research Institute of Australia. The software was created for the Western Australian Goveral different manufac-turers' computers. It vernment and will run on secomputers. It is presently up and running in the War Department of the Premier, and in the Depart-ment of Agriculture. It will next be implemented at the Metropolitan Water Authority and the Education Department.

BRAZIL

RIO DE JANEIRO - The Brazilian computer firm Cobra is reportedly facing a major crisis with the resignation of its president, Antonio Carlos De Loyola Reys. With-out directly criticizing com-pany shareholders, Loyola Reys attributed his resigna-tion to the fort that retion to the fact that resources were never allocated where most needed and that the role of the company, in terms of technological development, has never been clearly defined. According to Loyola Reys, the shareholders should allocate funds to relieve the company of debt and also rearrange the com-position of shareholders to give the government absolute majority. It is not yet known will replace Loyola who Reys.

CHINA

BEIJING — China's largest domestically produced mainframe was unveiled here recently by the Research Institute of Computing Technology. The 64-bit Galaxy System 757 is capable of operating at speeds up to 10 million instructions per

second, ten times faster than China's former top-of-theline DJS 260 system. The System 757 has a main memory of 520K bytes and is intended for parallel processing in large-scale scientific and engineering applications.

FRANCE

PARIS — Carte Bleue, the credit card system developed by Intelmatique here with

3.3 million customers, has adopted "smart card" technology. Intelmatique will begin issuing the new cards, with memory, intelligence and security implanted in a microprocessor on the card in February.

JAPAN

TOKYO — Digital Research Japan has announced a Kanji version of its CP/M

microcomputer operating system. Kanji CP/M has the ability to convert Kana and Roman letters into a Kanji phrase or sentence; the user simply inputs Kana or Roman characters and presses the Kanji conversion key. According to Digital Research Japan, Mitsubishi Electric Corp., Sanyo Electric Co. Ltd. and Sord Computer Corp. are among nine vendors that plan to adopt the Kanji CP/M operating system as a stan-

dard for their machines.

TOKYO — Toshiba Corp. has combined lens technology and convergent circuit technology to create a display of 10,000 characters on a 100-in.-high screen. The display system is said to have six different types of signal processing circuits that handle video and computer signals for large screen displays needed in video con-

HARD FACTS

ABOUT THE REAL LEADER IN COMPLETE SOFTWARE FOR BUSINESS: RAMIS II FROM MPG

FACT:

RAMIS II Is The One System For All Your Users

To meet the full spectrum of application development and information. Center needs, RAMIS II starts with the most advanced decision support capabilities: a powerful report writer, a complete relational language, full-color business graphics, and much more.

Then we add a data base manager robust enough for high-performance on-line applications, a multitrasked IP monitor that minimizes overhead and state-of-the-art sareen formattina.

The result is the only integrated data base/data communications system designed for both highly structured transaction processing applications and unstructured decision support systems. And, the only product designed to fully unlock the power of your IBM mainframe, whether it's a 4321 running SSX, or a 3081 running MVS/XA.

RAMIS II Unlocks Your Existing Data

RAMIS II maximizes the return on your investment in data through ready access to ADABAS, IMS, TOTAL, DL/I and IDMS data bases, as well as VSAM. ISAM and sequential files

With the most powerful report writer available, plus graphics, REATE and even English comprehension, RAMIS II unlocks external data easily and efficiently.

The Full Commitment And Support Of Martin Marietta

Leadership takes vision, plus the commitment and resources to turn that vision into bold new products.

FACT: More copies of RAMIS II have been sold than all other 4 GL's combined.

FACT: RAWIS II English comprehension responds to everyday English commands.

FACT: MPG developed the first practical relational language.

FACT: There's no more powerful sysrem for screen-based applications than RAMIS II.

FACT: RAWIS II was the first product designed for both application building and information Centers.

To achieve our goal of a complete soft-ware solution, we have invested an average of 16% of annual revenues in research and development—more than twice the industry average.

Now, as part of Martin Marletta Data Systems, we offer a complete range of information solutions, from software products to professional services, from processing services to integrated systems. And, the financial and technical strength of Martin Marietta, a divestified company with more than \$3½ billion in revenues, is accelerating new product development.

It takes more than a roar to be the leader. When it comes to providing a complete software solution, the facts prove there's only one real leader—RAMIS II from MPG.

To ger all the facts, visit one of our regional Product Demonstration Centers, or attend a free RAMIS II seminar. For more information, call your local MPG office or call roll free (800) 257-5171. (In New Jersey call (609) 799-2600, Ext. 2325.)

"Rockwell International eliminates order management paperwork and ships products faster with a Tandem NonStop" Computer System."

Robert P Marovich, VP and Controller Avionics Group Rockwell International Corporation

Our Tandem NonStop computer helps us dramatically streamline order tracking for our broad line of products here at the Collins avionics facilities in Cedar Rapids. This automated operation has meant we ve been able to ship our products faster, as well as respond to customer inquiries in a much more timely, accurate fashion.

The Tandem system consolidates all data pertaining to the orders, from order entry to scheduling, inventory issue to packing lists, and

right on down the line to shipping. And, because the system is on-line, other departments have immediate access to this information as well: Accounting, for example, now generates invoices automatically, resulting in much improved cash flow: Manufacturing is saving \$175,000 a year in internal freight charges due to the reorganization of ordering and shipping procedures: and the Group as a whole has been able to eliminate more than 300,000 reproduced documents a year.

Other system benefits contributing to our improved

customer service include better control of backorders, more accurate pricing information, and the ability to make detailed forecasts of market conditions for planning purposes. The net result is an operation that is helping us achieve some very significant gains in plant productivity.

The NonStop System. Ideally suited to on-line transaction processing where continuous availability of up-to-the-second information is critical to your business.

Tandem. Fully supported by a worldwide sales, training, service and manufacturing organization.

For information on how a Tandem NonStop system can improve your productivity or your P/L statement, call your local sales office or Tandem Computers Incorporated, 19333 Vallco Parkway, Cupertino, California 95014, U.S.A. Toll Free 800-482-6336 or (408) 725-7500 in California.

NonStop Transaction Processing

Universal interconnection seen next interchange step

WASHINGTON, D.C. — Universal interconnection is the next major advance in electronic data interchange, according to T.J. O'Rourke, president of Tymshare, Inc.

He was among the speakers here last month at the annual meeting of the Transportation Data Coordination Committee (TDCC), which

develops, maintains and promotes business use of electronic data interchange standards. Tymshare is a major supplier of on-line, computer-based communications/information services.

The first electronic data interchange standards, O'Rourke said, were "closed," limited to specified

applications and required adherence to proprietary standards. Next came "open" systems, which did not require the use of any particular hardware, software or network service but did make adherence to a specific nonproprietary communications protocol mandatory. The grocery industry's Uni-

versal Communications Standard (UCS) is one such open standard, O'Rourke said.

He added that open systems are now beginning to be replaced by "generic standards," which contain the resources needed to resolve differences between user systems; thus, they make standards irrelevant. By pro-

moting communications across company and industry boundaries, he expects generic standards to increase vastly electronic data interchange traffic.

At the TDCC meeting, Tymshare unveiled a service called Edi-Net which, according to O'Rourke, embodies a generic standard.

REPORT from page 19

ferencing, superintendance control, propaganda, education and television broadcasting, a spokesman said. The product, including projector, video control unit, power unit and screen, costs about \$2 million.

OSAKA — Sharp Corp. has introduced two multi-function Japanese word processing/personal computers. The WD 2200 and WD 2700 can also be remotely connected to an IBM host computer and emulate IBM 3270 terminals, the vendor said. The WD 2700 also has image scanning capabilities, along with hard disk and ink jet printer options. The WD 2200 with a thermal printer costs \$4,247, and the WD 2700 is priced at \$7,872 with dot matrix printer and \$9,362 with an ink jet printer.

MATSUMOTO — Epson Corp. and Suwa Seikosha Corp. Ltd. have jointly announced Skymirror SM-10, a microcomputer designed to capture weather information from weather satellites and instantly display the data on a personal computer. Floppy disk drives or cassettes can be used to play back the weather data as needed. The system, priced from \$9,574, can also be used as a standalone Japanese word processor and personal computer.

NEW LIFE FOR 1401 PROGRAMS

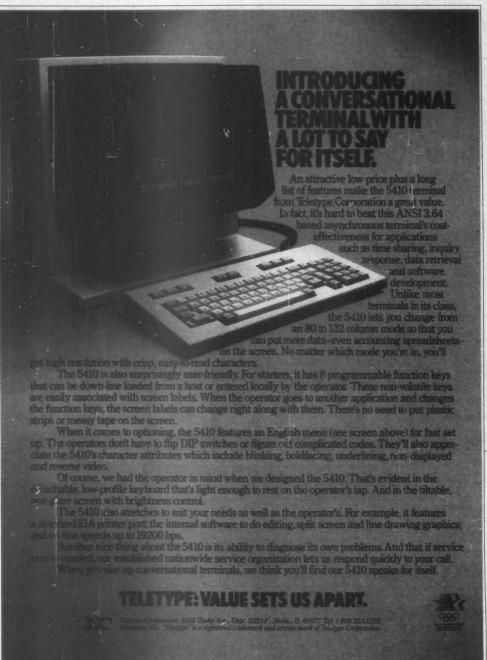

CS-TRAN converts your 1401 object programs to COBOL for the main-frame or mini of your choice.

CS-TRAN is the only translator that accepts your object programs, patches and all, yet allows you to include actual COBOL paragraph names and record definitions.

If you'd like more details about new life for your 1401 programs just call or write Russ Sandberg.

C·S Computer Systems Inc. 200 South Main Street, P.O. Box 356 Manville, NI 08835 • 201-526-9000

HERO ARRIVES AS THOUSANDS GHEER

THE PERSONAL COMPUTER: BOON OR BOMB? IT DEPENDS ON YOUR AIM.

The personal computer is a hit. Everyone wants one. The problem is, in a business organization, it's <u>too</u> personal. Every operator becomes an electronic freelancer, hoarding personal data. Incapable of, or unwilling to,

exchange information with other computers.
Work is lost or duplicated. Even triplicated.
Which drives costs—and information managers—crazy. This is Computer Shock. Fortunately,
Mohawk Data Sciences has the treatment.

ENTER THE HERO! NOT A MOMENT TOO SOON.

MDS® introduces HERO™ the Networked Personal Computer. HERO is an intelligent desktop workstation. The heart of a HERO is a 16-bit microprocessor. Its magic transforms personal computing into a corporate asset.

In HERO, MDS offers a personal computer with the ability to contribute to, and draw from, an entire organizational information network. Integration replaces disintegration.

See why we named it HERO?

INFORMATION FLOW THAT WAS NOT WORKING WILL NOW BE NETWORKING.

No more isolated little fiefdoms. No more anarchy. No more lack of central control. Coordinated with the MDS Communications Processor, HERO ties your information network together. Individual workstations can talk to each other. They can draw from depart-

mental and corporate sources. And vice versa.
You keep your current network and HERO improves it. Your people keep their current jobs.
They just do them better. Your investment is not only protected, it works harder.

And it all works for you.

MDS MERGES WITH IBM.

HERO marries compatibly into IBM networks. Using the MDS Communications Processor, HERO can talk with IBM mainframe computers. It's engineered to look like IBM 3270 SNA or 3776 remote job-entry systems. And our MDS Super SNA option lets you have both on one communications link. Most IBM

and non-IBM protocols are available, including binary synchronous, asynchronous and X.25.

Only MDS offers you INTELLIGENT 3270."
It integrates the intelligence of HERO with the intelligence of the host. User-written HERO programs can draw data from the host, process it, update it and return it. Or store it locally.

HERO DOES EVERYTHING A PERSONAL COMPUTER DOES. ONLY MORE HEROICALLY.

Since it's engineered to help you make decisions, HERO naturally provides word processing, financial spreadsheets, scheduling, analysis and planning functions. And it can run software under MS-DOS.

HERO is multilingual. It can understand programs written in FORTRAN, PASCAL and BASIC. As well as existing MDS Series 21® programs written in COBOL and MOBOL (Mohawk Business Oriented Language).

HERO HAS BRAINS TO MATCH ITS LOOKS.

With HERO's 16-bit processor comes memory expandable from 256K to one megabyte, with private disk storage up to 80 megabytes.

HERO is small, light and handsome. It fits snugly on the corner of a desk, and has the

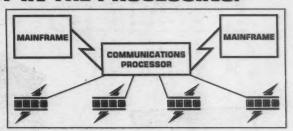

quiet, impressive good looks which inevitably find their way into the corner office.

Memory and storage modules are textbook size. They tuck away under a desk. With MDS, out of sight is never out of memory.

MDS SAVES YOU MONEY IN THE PROCESSING.

The MDS SUPER 21™ Communications Processor can cluster as many as 16 HEROS to a shared database. Each workstation shares the same disk drives, tape drives, printers, modems and communications lines.

And you share the savings. SUPER 21 provides two communications ports that operate simultaneously. It can talk to two different mainframes in two different protocols at once.

HERO TODAY, HERO TOMORROW.

HERO is designed to grow with your system. The modular sections are made to snap together. So it's a snap for a user to assemble, install and repair.

Built-in diagnostic "confidence tests" give you a sequential read-out, verifying that

your HERO is healthy and ready to go.

If you need help, MDS staffs over 1,500 Field Engineers in hundreds of locations around the world, around the clock. Whatever your needs, we'll work out a maintenance plan that suits you.

THE MDS PHILOSOPHY: UNITE AND CONQUER.

Twenty years ago, MDS set out to devise programs linking business systems together. Not just office automation—word processors and personal computing. Rather, automation for entire organizations: sophisticated networks linking remote locations together.

Over the years, by listening to our users and by responding to their specific networking needs, we've become acknowledged experts

in automating the organization. By making this responsiveness our number-one priority, MDS has become a multidivisional, multinational networking organization.

We'd like to help you do the same. If you want to know more, we suggest two informed sources:

(1) Talk to our customers.

(2) Call us at 800-MDS-HERO.

MDS HERO WILL MAKE A HERO OUT OF YOU.

ICA seminar set for Jan. 15-18 in Fort Lauderdale

Theme of meet — integrating the digital office

FORT LAUDERDALE, Fla.

— The International Communications Association (ICA) will hold a seminar on digital telecommunications technology trends in management on Jan. 15-18 at the Fort Lauderdale Marriott Hotel and Marina.

The theme of the seminar will be "Integrating the Digital Office," focusing on alternatives for merging installed components of office automation into a unified system. The meeting will include a series of intensive sessions exploring a range of issues re-

lating to digital technology and its implementation.

According to an ICA spokesman, seminar topics will deal with technical and management aspects of digital private branch exchange (PBX), transmission methods to interconnect advanced de-

vices, evolving digital network standards and trade-offs related to bypassing local telephone company facilities

The impact of deregulation will be examined in several sessions dealing with the divested local phone companies, the spokesman said.

The tuition fee for the seminar is \$425 for ICA members and \$450 for others. More information about the seminar is available from ICA headquarters at Suite \$28, LB-89, 12750 Merit Drive, Dallas, Texas 75251.

DISCOVER THE DYSAN DIFFERENCE

Finally, there is a total solution for your microfloppy needs . . .

The Dysan 3¼" Flex Diskette.™

It assures a source of high quality duplication services from Dysan's established production

It includes both alignment and Dysan's exclusive Digital Diagnostic Diskettes (DDD) for trouble-free drive operation and media interchangeability.

It utilizes a high performance, cost-effective and widely available media, selected specifically for minifloppy plug compatibility. Its flexible jacket bends without damage, and optimizes media lifetime in contaminated environments.

It is from the same company who standardized the minifloppy with Shugart and the 5.25" Winchester drive with Seagate.

Considering supporting services, minifloppy compatibility, product availability and proven performance, it's apparent there is only one complete microfloppy standard.

The Dysan 3 ¼ " Flex Diskette.

W." Flex Diskette is a registered trademark of Dysan

AT&T chief to speak

NEW YORK — Charles L. Brown, chief executive officer and chairman of AT&T, will keynote a seminar here Jan. 26-27 on the business, legal and regulatory strategies of telecommunications companies.

"The New Telecommunications Landscape: The Companies Speak on the World of 1984 and Beyond" will be held at the New York Hilton by the Legal Times and Law & Business, Inc./Harcourt Brace Jovanovich, Publishers. Key executives from a variety of telecommunications companies and speakers from government, legal, financial and consulting organizations will participate.

Registration, including lunch and a reception, is \$425 per person (\$335 for representatives of nonprofit and government organiza-

Additional information is available from Law & Business/Harcourt Brace Jovanovich, 767 Third Ave., New York, N.Y. 10017.

Telexchange to hold meet

SAN FRANCISCO — The Fourth International Telexchange Meeting, scheduled at the Westin St. Francis Hotel here Jan. 16-18, will focus on system security, high-resolution computer graphics and micro-to-mainframe integration using Telefile Computer Products, Inc. and Xerox Corp. Sigma systems.

Sponsored by Telexchange, the Telefile Computer Users Group, the conference will also feature discussions on performance monitoring, state-of-the-art hardware and software development and additions to the users group library.

There will also be general

There will also be general business meetings and special-interest group meetings at the conference.

Registration costs \$200. More information is available from Telexchange, 17131 Daimler St., Irvine, Calif. 92714.

Interest bonus proves bogus for bank's customers

By James Connolly CW Staff

COLUMBUS, Ohio - Some savings account customers at the Ohio State Federal Savings and Loan Association here recently got a surprise bonus in their passbooks. But their good fortune was nullified quickly by the comput-ers that created it.

A misunderstanding be tween a service bureau and the bank caused computers credit \$100,000 to \$200,000 in extra interest to more than 2,000 customers. The bank reclaimed that money within a week from disappointed but "under-

standing" savers.
"To this point, reaction from customers has been pretty understanding, once they knew what the situa-tion was," said Stanley Spencer, vice-president for communications at Citizens Federal Savings and Loan Association, Ohio State's Dayton-based parent company. "Even most of the negative reaction was just, 'How did this happen?' When we explained it, they understood.
"It was just one of those

freak things."

The error had its roots in the merger of the banks last year, when Citizens Federal, which used an NCR Corp. 8500 financial system, took over Ohio State Federal Savings, which utilized a Burroughs Corp. B4890 system through the Savings and Loan Data Center in Cincin-

Spencer said that Citizens Federal allowed a year to integrate Ohio State into the

NCR system. Oct. 22, a Sunday, was chosen as the conversion date. "What happened was that they were projecting the interest a cusner would earn through the end of the interest cycle, rather than cutting it off on Sunday," Spencer explained.

The data center continued crediting accounts through the week of Oct. 22, although the host computer at Citizens Federal was crediting interest as of the 23rd.

At the end of the week, when Citizens Federal received reports from the data center, officials noticed the excess interest paid. The extra interest averaged less than \$50 per customer and probably did not exceed \$200 for any single customer, Spencer said.

After discovering the er-

ror, the bank sent letters to

between 2,000 and 3,000 Ohio State customers ex-plaining the situation. Accounts were then reduced by the appropriate sum.

Spencer said the bank lost "little" money through customers closing accounts before the error was found.

It's time the technology of data collection caught up to the technology of data processing.

Meet to cover fiber optics

MADISON. Wis. three-day program on the "Design of Fiber-Optic Communications Systems" will be held here March 12-14 at the University of Wisconsin Extension.

The program is structured to assist the design engineer and experienced technical personnel in the understanding and design of fiber optics in communications systems.

The program will be presented by industry leaders and will address subjects of fiber parameters, receivers and transmitters, optical measuring techniques, design, cable installations and broadband applications.

The fee is \$475. Further information is available from the Department of Engineering & Applied Science, University of Wisconsin Exten-sion, 432 N. Lake St., Madison, Wis. 53706.

The speed of your data processing is limited by the speed of your data collection and input. Unfortunately, for a lot of people, data collection technology stopped with the development of the clipboard.

But MSI has changed all that. Because MSI portable data collection systems are microprocessorbased answers to multipart forms. They actually extend the power of your central computer by allowing data to be keyed in right in the field. And then transmitted over ordinary phone lines to a host computer or data processing center.

MSI systems eliminate paper shuffling, keypunching, and errors by collecting data at its source. At

the same time, we return control to the data processing department, eliminate costly time delays, and match the sophistication of your central system with our equally sophisticated remote system.

Our family of hand-held terminals can be used anywhere there's data to be collected. For salesman order entry, inventory control, financial reporting, manufacturing control, and field data collection tasks of all kinds.

Learn how MSI data collection products can bring your system to the peak of its capabilities. Just return the coupon

You'll find the technology of data collection is right where you want it.

The world leader in portable data collection systems.

MANAGERS ON THE MOVE

BURT MALL has been appointed director of data processing at Intermatic, Inc. in Spring Grove, Ill.

Mall moved to Intermatic — manufacturer of automatic timers, outdoor lighting and heaters — from A.G. Becker Paribas, Chicago investment bankers, where he was manager of operations analysis. Prior to that, he was manager of data processing for 10 years at Northern Petrochemical Co., Inc., a division of Internorth Corp. in Des Plains, Ill.

Mall is a graduate of the Southern Illinois University in Carbondale with a B.A. in psychology and a minor in mathematics. He has completed work toward an MBA at Northern Illinois University in De Kalb, Ill.

CHARLES E. WOOD has been promoted to vice-president of information systems in the tire division of Copper Tire & Rubber Co. in Findlay, Ohio. Besides continuing to be responsible for computer operations, operations research and analysis systems and systems planning, computer programming and office equipment, Wood gains additional responsibility as planning coordinator on the division's executive staff.

Wood was director of Cooper's data processing department from 1969 to this year, when the department was reorganized as Information Systems. He has held various managerial and supervisory positions in the systems and data processing areas since joining the company in 1959.

Wood holds a B.S. from Findlay College. He completed an advanced management program at Bowling Green State University in 1976 and has done graduate work there since 1980.

LEON B. BILLIS has been elected vice-president of The Equitable Life Assurance Society of the U.S. in New York. He will be responsible for planning for the company's computer centers.

Billis joined Equitable in 1963 as an operator in the data processing department. He was named a senior systems specialist in 1975, manager of the Technical Division in 1977 and manager of the Planning Division in 1978. He was elected assistant vicepresident in 1980.

He is a 1974 graduate of Baruch College with a B.A. in business management. He received his MBA in executive management from St. John's University in 1970.

ALBERT A. SINISI JR. has been promoted to executive associate to the vice-president and director of technology resource management at

Thomas Jefferson University in Philadelphia. In his new role, Sinisi will address issues governing the impact on Jefferson of new and ad-

vanced technologies. He will have general responsibility for recommending to the senior officers the policies and processes by which the university will manage the acquisition and assimilation of new

technologies.

In his new post, Sinisi will be responsible for technology forecasting and planning, generally defining the capital, operating and human resources requirements of technology acquisition and coordinating the integration of complementary technologies, such as telecommunications and data processing. He will retain responsibility for completing Jefferson's new electronic data processing plan and will serve as the chairman of the technological subcommittee of the university's telecommunications committee.

Sinisi-began his career at Jefferson in 1970 as a project manager in information systems and was promoted three years later to associate director, a position he held for the next five years before becoming director.

Prior to his work at Jefferson, Sinisi was a systems analyst at the General Electric Co.

In addition to his responsibilities at Jefferson, Sinisi is currently a member of the Mayor of Philadelphia's Advisory Board for Information Management.

He is a graduate of St. Louis University with a B.S. in aeronautics. He obtained his master's degree in business administration at Widener University in Chester, Pa.

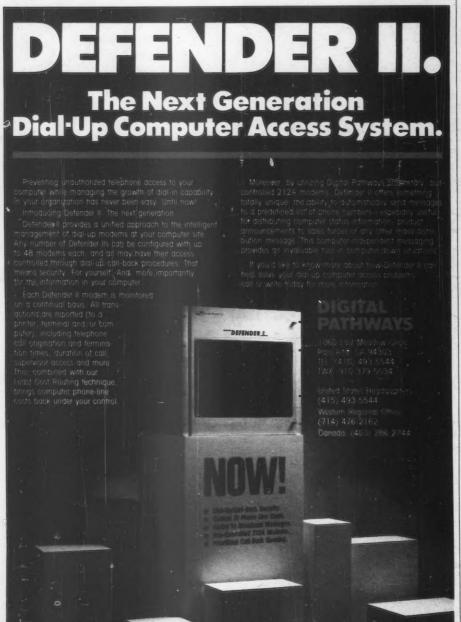

CHERRY HILL, N.J. — Data Decisions, Inc. has published a directory of 66 graphics and computer-aided design and manufacturing (CAD/CAM) packages produced by 34 vendors. The packages run on mainframes, minicomputers and microcomputers.

Product descriptions are alphabetically arranged, preceded by a reference chart. It describes intended users, lists operating systems required and highlights functions and options.

The report, "Graphics and CAD/ CAM," is available for \$29 from the vendor.

Data Decisions is headquartered at 20 Brace Road, Cherry Hill, N.J. 08034

It's fast, flexible,

and very easy to program

The Marinco APB-3000PC series processor puts quicker-than-mainframe power into a single PC slot. In minutes it can be up and running.

The board is so flexible it will use virtually any algorithm. Order the standard set. Or create your own.

Because it speaks fluent Fortran, the board is easy to talk to, and easy to use.

And it's fast, Marinco has made it possible to complete complex computations not in minutes, but in milliseconds.

6

This new array processor is excellent for simulation, digital signal processing or other advanced mathematical computations.

Best yet, board versions start at under \$2000. Even less in quantity.

Call us toll-free today.

We'll send you detailed product information about the easiest-to-use, most flexible (and very inexpensive) array processor in the PC world.

U.S. and foreign patents pending

Computer chess champions

'Cray Blitz' wins chess trophy

NEW YORK — Belle, a seasoned champion, was unbeaten in 27 consecutive matches. Former champion Nuchess was in fine shape and looking for revenge. Built for speed, Cray Blitz was the top threat among the 20 other contenders.

After the dust had cleared at the triennial World Com-

puter Chess Championship, held here in conjunction with the recent Association for Computing Machinery meeting, the developers of the Cray Blitz computer chess program walked off with the top trophy.

About half of the programs competing against each other for the crown of World Computer Chess champ were played on micro-computers. Although some of those micro-based contenders fought hard, they proved in the end no match for their bigger foes, some of which employed more than one processing unit.

Triumph over belle

Cray Blitz, which runs on a Cray Research, Inc. Cray-1/M series processor, battled to a draw with 1977 champion Nuchess in the tourney's fourth round and triumphed over 1980 champ Belle in the final round en route to the championship. The developers of the Cray Blitz program, Dr. Eugene Moore and Dr. Robert Hyatt of the University of Southern Missispipi, faced challengers from eight nations, including Canada, England, West Germany and Austria.

The loss of the title was particularly bitter for Belle, which operates on a Digital Equipment Corp. PDP-11/23 processor, as the U.S. Chess Federation had only recently recognized the former champion as the first chess program worthy of a national master rating.

Journal covers Fortran's 25th

RESTON, Va. — The January 1984 issue of the Annals of the History of Computing, a quarterly journal published by the American Federation of Information Processing Societies, Inc. (Afips), is a special issue covering Fortran's 25th anniversary.

The issue contains 14 articles by original developers and users of Fortran, a widely used high-level programming language. Articles include "Early Computers and Computing Institutions," "Computing Prior to Fortran," "Early Fortran User Experience" and "The Impact of Fortran Standardization."

Single copies cost \$10-\$20. A one-year subscription to Annals costs \$22 (members of Afips Constituent Societies), \$30 to nonmembers and \$50 to institutions.

Further information is available from Afips Press, 1899 Preston White Blvd., Reston, Va. 22091.

With 3M diskettes, your computer never forgets.

3M diskettes remember everything, every time. Because at 3M, reliability is built into every diskette. We've been in the computer media business for over 30 years. And we've never settled in. We're constantly improving and perfecting our product line, from computer tape and data cartridges to floppy disks.

3M diskettes are made at 3M. That way, we have complete control over the entire manufacturing process. And you can have complete confidence in the reliability of every 3M diskette you buy.

Look in the Yellow Pages under Computer Supplies and Parts for the 3M distributor nearest you. In Canada, write 3M Canada, Inc., London, Ontario. If it's worth remembering, it's worth 3M diskettes.

3M hears you...

FIRST CONCEPT TECHNOLOGIES, INC.

Announces

INTERCHANGE/1

The complete Micro to Mainframe Data Link. Available for installation TODAY.

INTERCHANGE/1 allows personal computer users complete access to mainframe data. PC programs can treat that data as if it were actually stored on the personal computer. ADABAS, IDMS, TOTAL and VSAM files can be accessed with simple GET, INSERT, UPDATE and DELETE commands, from standard PC programming languages.

INTERCHANGE/1 is the complete micro to mainframe link. It requires no special PC "database language", but instead extends PC BASIC and PASCAL by adding database manipulation commands. Several mainframe files may be accessed from a single PC program.

INTERCHANGE/1 supplies records on request, without the need for full file transfer, just as normal PC file processing does. It also allows sophisticated data "queries" through its programmatic "GET MATCH" command. You supply the criteria, INTERCHANGE/1 returns only those records which meet

Where full file transfer is necessary INTERCHANGE/1 provides both an UPLOAD and a DOWNLOAD utility. UPLOAD can be used to enter records interactively from the PC, or to transfer records from a PC file to the mainframe database. DOWNLOAD will allow transfer of mainframe files to the PC and will even prompt for MATCH criteria so that only the desired records are transferred.

INTERCHANGE/1 includes both the micro and mainframe interface. No user written mainframe program is required. Full mainframe security is provided and can be controlled at the central computer. The Data Center determines which fields in a file may be accessed by a particular user and assigns passwords to control the level of access (READ-ONLY, UPDATE, INSERT/DELETE).

INTERCHANGE/1 is a true micro to mainframe interface because it treats the microcomputer as an equal, not as a 3270 terminal.

INTERCHANGE/1 is the first in our CONTINUUM series of products for Distributed Data Processing (DDP). We are committed to supporting a true DDP environment.

INTERCHANGE/1 forms the basis for an integrated distributed resource

INTERCHANGE/1 currently supports mainframe ADABAS, IDMS, TOTAL and VSAM files and interfaces with the IBM Personal Computer. Support for additional mainframe database products, additional microcomputers (Apple, Wang) and additional "mainframes" (VAX, BURROUGHS, DATA GENERAL) are under development. Call us for details or special requests. If we don't have it now, we will build it for you.

Within the next several months, at least a dozen micro/mainframe links will be announced by other manufacturers. To help you in evaluating the products which have been, or will be announced, we have prepared a booklet, in easy to understand "laymen's" terms, titled:

> "All you need to Know about the Micro to Mainframe Link Questions to ask your vendor."

The booklet describes what is necessary in a true micro to mainframe link, and explains some of the terms used to describe the various versions available. It will help you to determine what level of link you require for your environment.

> For your free copy of our booklet call Toll Free 1-800-448-3400

> > 1-800-962-5000 (in New York) or return the coupon provided below

To futher assist your finding a product to meet your needs, WE have provided a list of those vendors we know who have already announced or will be announcing some form of micro to mainframe link. It is not exhaustive, and WE invite any vendor we miss to let us know, so we can include them in our next ad.

"Our Competition"

TURNAROUND TIME

LARRY E. LONG

I was moved from development work into management information systems (MIS) planning about 18 months ago. Since that time I have completed two MIS plans. One was operational, and the other was in response to top management's request for a strategic plan for MIS.

Both plans have been well-re-ceived in the MIS department, but top management thinks our MIS strategic plan is still too operational. I've been asked by the director of MIS to revise the last plan to emphasize strategic planning. Do you have any suggestions about how to proceed?

Many MIS "strategic" plans are no more than management summaries of more detailed operational plans that concentrate on new sysdevelopment, major enhancements and hardware upgrades. Top management's response to your strategic plan indicates to me that you may have fallen into this same trap.

You may be better off starting from scratch than trying to revise the MIS strategic plan. At this point, top management is not going to be satisfied with a revised operational plan. They want a plan that articu-lates those MIS strategies that are consistent with, and complementary to, corporate objectives.

If you haven't already done so, review the corporate strategic plan to ee if it identifies any directions for MIS (often it does not). Invite input from corporate planners. Follow any corporate planning guidelines to the

extent possible.

Keep in mind that top management wants a strategic plan that focuses on what has to be done to achieve specific results. Through a series of discussions with top management and MIS managers, derive a consensus of what the function of MIS is to be. Then set a series of strategic ob-

In the plan, accompany each strategic objective with a brief explanation of how that objective is to be met. Each major planning area (sy-tems, hardware, personnel, opera-tions, communications and so on) should be supported by at least one

strategic objective.

For example, the strategic objectives for information systems planning might be to integrate existing and proposed information systems in a data base environment and to emphasize user friendliness and distributed data processing in systems de-

Finally, keep it to 20 pages or less.

I've conducted several in-house I've conducted several training sessions over the last three years on data base management and structured design. I enjoy teaching and would like to know what the career opportunities are in colleges and universities. Are there opportunities for part-time instructors?

Academe is experiencing a des-perate shortage of data processing and computer science instructors. In all likelihood, you need look no further than local institutions to find openings. Recruitment of both full-

time and part-time faculty has become an ongoing task in most depart-

I'd like to add some specifics to your response to a person who was doomed to documenting dino-saurs. We follow these guidelines in updating the documentation of old systems and programs that have no documentation or poor documenta-

1. Documenting the data flow is more important than documenting the programs

2. Set a time for documenting a

3. Begin with the identification of all programs (not program internals). 4. Compile data flow diagrams showing all I/O for each program (files, data sets, reports and screens).

5. Now, if time permits, identify the worst programs and list the programming tricks that they us

Your guidelines are good, but allow yourself enough flexibility to spend more time on the redocu-mentation of old systems that are extremely volatile and critical to orga-nizational operation (and sometimes survival). Give these dynamic systems more attention than the relatively stable systems that have cumbut documentation.

I would like to work in Europe or perhaps South America for a few years, while I'm still young and unattached. I have five years' exper-ience as a programmer/analyst. Will I be able to find a job?

The best opportunities for employment are in the Third World countries and countries with óil-based economies. Jobs and work visas are more difficult to obtain in industrialized Europe.

Nationalism is strong in most countries, and employers prefer to hire their own, when possible. To get your foot in the door, you will proba-bly need to demonstrate a specialized expertise and facility with the language. The oil countries are less de-

WHEN YOU'VE GOT TO BE RIGHT

In business, being right is what it's all about. Right in the decisions you make, right in the equipment you select to help you make those decisions.

AT&T Information Systems can help you be right. Now more

than ever before.

As of January 1st, all our business communications equipment is for sale or for lease. Whether it is equipment you already have, or additional equipment you might need. We offer everything from basic business phones to the most sophisticated voice and data systems in the industry. And you can buy them at competitive prices that are consistent nationwide. Simply give us a call to discuss all the options available to you.

Also on January 1st, our service and sales forces were integrated, united into the largest organization of its kind anywhere. There are 206 branch offices across the country. Plus 79 Business

Service and Sales Centers.

No matter what size your business, we'll help you with planning, installation and maintenance. Before, during, and after the sale.

What else is new? A new spirit of competitiveness throughout the company, from top to bottom. A new dedication to the idea of providing you with better products and better service. On faster timetables.

A few things haven't changed. We're still supported by the genius of AT&T Bell Labs, plus the benefits of more than 100 years of communications experience.

Before you make decisions vital to moving your business ahead, talk with us. AT&T INFORMATION SYSTEMS.

1-800-247-1212.

It's worth your while, when you've got to be right.

Speaker cites next decade's concerns, players

By John Gallant

NEWTON, Mass. — Communications capabilities, computing power and memory will become increasingly inexpensive, but programming costs will be the fly in the ointment in the DP marketplace of the next decade, according to an industry expert who spoke here recent-

In addition, Robert G. Gilbertson Sr., president and chief executive officer of Data Switch Corp. of Norwalk, Conn.; told the Boston Society for Information Management that IBM will "continue to cast a heavy shadow in the computer industry" with even more aggressive pricing and the introduction of new products.

According to Gilbertson, IBM's increasing dominance does not bode well for "the seven dwarves" — the mainframe vendors that do not make IBM plug-compatible machines.

IBM to dominate

"We will be dominated even more by IBM in the 1980s than we have been in the past. Within its corporate structure, IBM has created organizational groups that are designed to attack any chosen market through whatever means available. We've seen that clearly with the Personal Computer, and I think you'll see it with local-area networks also," said Gilbertson, a former IBM executive and faculty member of the Harvard Business School.

"In the mainframe market," he forecast, "it's clear that one or more of the nonplug-compatible manufacturers will retire by 1986 and the first will probably be

Honeywell, Inc.]."
Gilbertson predicted that IBM's upcoming moves will include replacements for the 3080 and 4300 series processors, a new "fiber channel" for high-speed data delivery and a new emphasis on distributed processing, with the expected introduction of the token and star ring local-area networks.

In response, IBM compatibility will become an increasingly popular survival strategy. "We can have all the IEEE [Institute of Electrical and Electronics Engineers] and Ansi meetings we want, but IBM will continue to set the standards in the industry," Gilbertson said. "For example, when the token and star ring local-area networks are introduced, they will quickly obsolete all other offerings. In the micro area, competitors like [Apple Computer, Inc.] will have to become IBM-compatible to withstand market pressures."

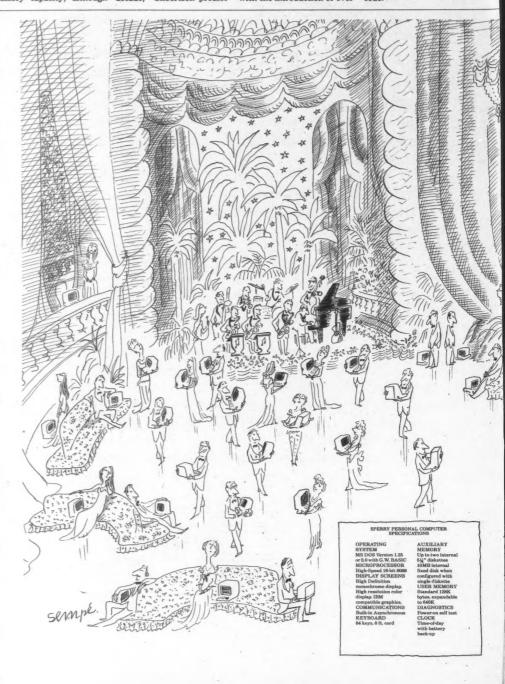

The private and government sectors will spend more than \$1 trillion in the next five years for DP services—a vast sum, but one that Gibertson said will purchase "huge capabilities." Processing power will become cheaper, as will additional memory capacity, although

he predicted that cost savings for increased storage will level off as "designers reach the electromechanical limits of these devices."

More important, "telecommunications costs will drop even faster in the unregulated environment of the next decade," Gilbertson predict-

ed. "It will become more and more economical to divide your processing resources, to move away from the idea of one central processing location."

But the "kicker" in all the good news, he said, is that programming costs will rise with the introduction of ever more new products requiring ever more sophisticated code. "It has been estimated that one line of Cobol code costs about \$14. That cost won't fall. We're getting better at writing bug-free code, but we aren't getting any more efficient at producing

See DATES page 38

The party started about three years ago for the personal computer.

And there was dancing.
But there wasn't much talking.
Because as more and more computer companies arrived, there were some very real compatibility problems.

Until one latecomer arrived. Sperry.
With a remarkably simple solution.
The Sperry PC.
It was able to run all IBM compatible software.

software.

It was able to run all this software with stunningly more dramatic graphics and from a substantially more comfort-able keyboard than IBM's. And, with the flick of a special "turbo" switch, the Sperry PC could even run

50% faster than IBM.
Enough for one night? Not for the
people from Sperry.
For the Sperry PC had the additional
ability to plug into the real brains of
an organization—the main computer.
Whether that system was IBM or

Sperry.
Or both.
The Sperry PC. An admittedly attractive arrival.
But when you get there late, you'd better have something important to being to the narty.

better have sometiming important to bring to the party.

To see how the Sperry PC can work for you and for your free copy of the Micro Software Catalogue, write

Sperry Corporation, Computer Systems Dept. 100, P.O. Box 500, Blue Bell PA 19424. Or call 800-547-8362.

Professional Computer. personal computer And tomorrow.

For your best performance and productivity, rely on the TI Professional Computer.

Critics have called it "the machine IBM should have designed." And "the optimum personal computer." And thousands of demanding business and professional people have had similar praise for the design, software availability and dependability of the Texas Instruments Professional Computer. Here's why.

Best internal design.

With the TI Professional Computer, you avoid the possibility of computer underbuy or overbuy. Unlike IBM, our standard PC can grow to XT capability - so you don't have to choose between a PC or an XT. If you need more computer after you buy the standard TI Professional Computer, add features like internal memory up to 768K RAM. And internal 10 megabyte Winchester disk. Or other expansion capabilities which you can add using our 5 built-in option slots. So you get more computer without buying a new one.

Best graphics.

Our high resolution monitors give you some of the sharpest displays available, 3-plane graphics and the capability for 8 simultaneous colors or monochrome shades (IBM and Apple give you only 4). Plus, unlike IBM, the same software runs on either the color or monochrome monitor.

Best software available today.

Literally hundreds of third-party software packages are available for the TI Professional Computer. Including the best-sellers like Lotus 1-2-3TM. TI and leading third-party software suppliers are committed to developing new programs to help keep your business ahead.

Best keyboard.

Superior design makes this the easiest to use keyboard. You get 12 programmable function keys for faster, easier use. Separate numeric keypad and cursor controls. And isolated edit/delete keys to prevent accidental loss of data.

Best new features for the future.

Come in to a participating dealer today for a demonstration of the TI Professional Computer using our revolutionary speech recognition to capability. Soon you will be able to add the recently announced Speech Command™ option to the TI Professional Computer. This will enable you to operate the computer with simple voice commands. Which lets you work a lot faster and easier.

Best support equipment.

We offer companion equipment like the OMNI 800°
Model 850 and 855 printers for reliable hard copy output. And, in early 1984, the EtherLink™ Local Area Network to connect your office workstations. All backed by the TI worldwide network of service and support.

See the TI Professional Computer for yourself. It is, quite simply, the best. Today and tomorrow. Now at participating ComputerLand stores and independent dealers. For the location nearest you, and answers to questions about your computing needs, call 1-800-527-3500.

TEXAS

And now, 1984

How perfect! We enter 1984, trying to shrug off George Orwell's dire warnings of government control and surveillance, only to find there is a proposal to expand drastically the Federal Bureau of Investigation's capability to monitor electronically noncriminals.

The proposal to expand the bureau's National Crime Information Center network to surveil "associates" of certain types of criminals is only in very preliminary discussion and may go no

But the trend is very disturbing. Last year the FBI and the Secret Service turned the NCIC, an interstate criminal records exchange system, into a national surveillance system by adding a file to monitor the activities of persons of interest to the Secret Service.

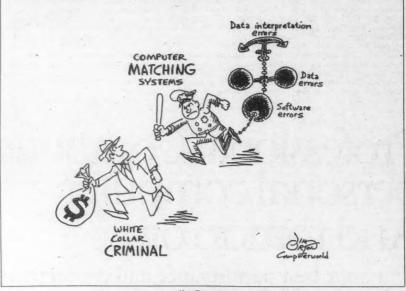

A congressional oversight subcommittee said the file was illegal, but the FBI claimed it was needed to protect the president. Now the FBI can claim it needs further surveillance capabilities to

stop terrorists, drug runners and foreign spies. Some, no doubt, will wonder why the FBI didn't have this capability before and why it should not have it now. Of course law enforcement should have the tools to stop terrorists and spies, but the NCIC should not be one of them. That system was designed to provide data to thousands of police officers and court officials across the country. These people surely are not the first line of defense against terrorists or spies.

More importantly, in some states the network is open to anyone and is used by many firms to see if job applicants have criminal records. What happens when your cousin, unknowingly in an NCIC "known associate" file because she babysits for a mobster's sister-in-law, goes looking for a job or is stopped for speeding? She might be denied a job or find a policeman, alerted to the NCIC "hit," pointing a gun at her.

That sounds far-fetched, but without some statutory guidelines, who knows what kind of information will go into this kind of file? And police system "computer errors" have resulted in the jailing and death of innocent people before.

It is frightening to consider what might happen if this sort of activity is allowed without spe cific legal authority. If the FBI can use records systems to monitor individuals, why can't other government agencies or even private corporations? In Orwell's novel, people were constantly monitored by the government. Now, it seems, in the real 1984 we might have many Big Brothers.

Handicap race

LETTERS TO THE EDITOR

Problems not common to all environments

In Barry L. Abramson's article, "Reducing Security Risks Associated With VM Access" [CW, Dec. 5], Abramson cites several security-related problems he has perceived in his organization's use of IBM's VM operating system and outlines the steps he has taken to address them. The article implies that these problems arise from operating system shortcomings and suggests that they might be corrected in future versions of VM.

Judging by the descriptions given, these problems are due mainly to the manner in which the operating system is used and are not common to all VM application environments. The solution techniques described employ standard tools provided to users by the operating system for that purpose and others and are not, strictly speaking, modifica-tions to the operating system. (However, system

source and change management tools are provided with VM to facilitate local operating system modifications, should they be needed to meet special installation requirements.)

It is difficult to see how the base VM system might be modified to alleviate problems such as those described without impairing or precluding many existing legitimate and productive uses of the operating system in differing environments.

Edson C. Hendricks Systems Consultant San Diego, Calif.

Inaccurate picture

Barry L. Abramson's article, "Reducing Security Risks Associated with VM Access" [CW, Dec. 5], sents a profoundly inaccurate picture of VM/ SP. Specifically:

Userids are normally not shared. The problems Abramson claims to solve are caused by users' sharing what should be private resources.

His scheme for naming files to indicate ownership and to implement control won't work and destroys the benefit of meaningful (user-chosen)

A number of products (commercial and public domain) are available for manually or automatically backing up data. Abramson seems to have discovered (for himself, the hard way) the benefits of

regularly backing up data.

The CMS command ERASE * * * (printed as ERASE ***) is invalid and is not allowed by CMS.

■ The cornerstone of his scheme, CMS EXECs for file protection, is terribly unreliable; an architecture built on EXECs can be defeated by a slightly knowledgeable user.

The article makes two valid points, but offers no solutions. First, sharing files among CMS users is cumbersome (but not for the reasons listed). Abramson fails to mention that many file and library management packages exist that provide controlled and auditable access to files across virtual machine boundaries

Second, he says that "the responsibility for ensuring system and file security rests with the managers and users of these facilities." But it requires a better understanding of the facilities and weaknesses of the system than he demonstrates.

VIEWPOINT

U.S. computer industry: 1984

LECHT ON SCIENCE

CHARLES

In 1984, fantastic changes, some started in 1983, others earlier, will deepen in their effect on our computer industry and cause

its evolution to the information services industry to be accelerated. This will occur if for no other reason than 1984's sudden entrance in our industry of a sea of communications companies to compete for marketplace share. The fact that one, AT&T, has the right stuff to capture a lot of it should give our computer industry added incentive for rapid change.

The computer industry events of 1984 will be as diverse as they are exciting. I offer the following in the realms of supercomputers, large mainframes, mid-range computer systems, minicomputers, microcomputers, terminals, telephones and services as representative.

Astonishingly, America's supercomputer industry will complete its withdrawal from our view. Control Data Corp.'s spin-off of Electronic Technology Associates, Sperry Corp.'s strange repudiation of Univac's name, IBM's decision to drop Josephson technologies and then to aid in the formation of Hypres as well as other signals emanating from Cray Research Corp. and from our newly formed Microelectronics Computer Co. all tell us that the really high-powered stuff is headed for silent and unseen development.

Large mainframe business

The large mainframe business will continue to exhibit youthful vitality as companies that need heavy fire-power are given increased incentives, including massive discounts, to acquire more and more of it. Price performance improvements will occur so rapidly that we will be confounded in assessing the residual values of things purchased. And each incremental improvement will be

Programming as we know it today will truly start to disappear in 1984. With increased usage of ISDN facilities a certainty, increased investment in their software offerings will occur. These will relieve us from the need to learn artificial lingos like Cobol to get a computer to do our bidding.

substantial enough to warrant our serious consideration of its adoption.

The mid-range computer industry as we know it will begin to vanish. Despite vigorous economic growth, these systems will see their usefulness diminish as stand-alone corporate facilities begin to be replaced by terminals linked to mainframes and/or to our emerging integrated services digital networks (ISDN). The advantages of centralized data processing will be rediscovered, as distributed systems facilities are easily obtainable through ISDN ports.

Our old minicomputer industry will merge with our new microcomputer industry; both will join the smart terminal industry, which will ultimately include the telephone industry. Then all of them — micros, minis, smart terminals and telephones — will slowly begin to metamorphosize into the dumbest terminals possible: idiot-proof boxes requiring as little thinking as we can get away with to perform our most sophisticated chores.

The labeling of terminals as dumb or smart will cease. We will discover that few intelligent people really want to program computers to do things that can be obtained without programming (all other things being equal).

Thus, we can expect our fast-rising sea of programmable devices to be soon engulfed in a swelling ocean of nonprogrammable analogs whose appearance will drastically diminish our need to program anything

our need to program anything.

Programming as we know it today
will truly start to disappear in 1984.

With increased usage of ISDN facilities a certainty, increased investment in their software offerings will occur. These will relieve us from the need to learn artificial lingos like Cobol to get a computer to do our bidding.

Natural-language front ends that place plain old English at our disposal are imminent. No, not the high-class literary stuff (which you're used to reading in my essays, of course), but rather the utterances of businessmen everywhere fumbling and mumbling through their chores and acting in decidedly human and discombobulated ways. Composed of monosyllabic phrase-like grunts whose issuances have a high probability of representing little more than frustration, plain old English is the evolved lingo of jawing businessmen everywhere and even in its inherent inefficiency and ambiguity is preferable to any synthetic language we may devise.

The need to program will also be diminished by yet increased usage of canned applications — especially when we are able to command these to do our bidding with natural-language utterances.

AT&T will increasingly enhance the services it offers while deploying a blizzard of devices to aid users in obtaining them, from telephones to portable personal computers to workstations to on-site corporate computer facilities. At the same time, it will modernize its communications facilities, install cellular mobile systems and announce alternatives to users currently faced with land-based "last-mile" interconnect problems.

IBM will make love, not war, with AT&T. All the Star Wars theories will be disproven in 1984, AT&T is IBM's largest customer; in turn, IBM's dependence on AT&T's communications facilities will increase inordinately in the year to come. AT&T, which is buying IBM 3084s as fast as it can, cannot carry off its plans without IBM products. Projected volume and delivery schedules could not be met even if the rest of the computer industry dedicated all its available production to the new AT&T, not to speak of its 22 offspring.

IBM will come out of the closet to

IBM will come out of the closet to become a highly visible telecommunications company offering every conceivable service by year's end. Starting as a reseller of AT&T communications facilities by offering a potpourri of enhancements (the company already uses AT&T lines to deliver its Information Network offerings) and moving on to eventual utilization of Satellite Business Systems facilities, IBM has set its course to become a major force in the telecommunications field.

The American computer and telecommunications industries, through their trade associations, will apply pressure upon our government in order to seek aid in thwarting foreign competition.

Japanese singled out

The Japanese will be singled out, since American electronics companies believe that European competitors are more a threat to themselves than to anyone else. The Communications and Computer Industries Association and its once arch rival, the Computer and Business Equipment Manufacturers Association, will join with the Electronics Industry Association to pool their resources in lobbying the corridors of Capitol Hill to prevent the sale of Japanese electronics in the U.S.

These biased and self-interested groups will unwittingly mount a campaign that can only result in higher See INDUSTRY page 42

Some of my best friends are users

HUMAN CONNECTION

JACK STONE

Although it may sometimes appear otherwise, I have no ingrained prejudice against the user community. If the truth be known, some of

my best friends are users.

What has happened, though, is that the expectations of many of the new user set — based on a little knowledge of personal computer operations, enough to be dangerous — have transcended into the systems netherlands, a realm of automation make-believe that resides only in the imagination of unknowing users. Even worse, from such fantasies this ilk has derived ridiculous conclusions about the viability of the computer center organization, in certain cases passing such views on to top executives as gospel. I'll wager a pretty penny that if you wander un-

announced into a user's personal computer complex, you'll catch some conversational gems along this drift:

"Why don't we give each department manager a personal computer to control his unit's operating records and data files? By doing so, we can eliminate a great deal of the hardware in the computer center that, as far as we can see, is doing little more than creating jobs for that department."

Personal computers are more powerful, have great flexibility and are cheaper than the systems provided by the data processing organization. We should dismember the DP dinosaur and transfer the analysts into user groups where they can get a taste of the real world."

"Our central programming staff has been automated out of existence by the generalized file managers installed on our personal computers. No longer do we have to wait in line two years to get the programmers to

make some system changes. Now we can reformat our files ourselves and in a matter of a few minutes. Programmers are a dying breed."

lands-on demonstration

My reflection upon these people is simply expressed in the paraphrase of a biblical thought: The data processing community should forgive them, because they know not of what they do. The thrill accompanying a few elementary computer successes—finding the on/off switch of a personal computer, running a sort task and watching personalized letters pour out on a printer—leads the personal computer user to believe he is a genuine DPer. In fact, relative to the technical challenges in the large-scale computer center the personal computer experience is little more than that of a hands-on demonstration.

What can be done to deflate the wild notions that these novices have

about central computer services without losing their trust and confidence altogether? One idea is to let the users proceed on their own, allowing them to learn from their own failures that personal computers, in spite of all their remarkable assets, are, nonetheless, tiny machines.

Of course, they have a role to play, but more and more of the new users are finding that to meet the demands for processing truly large files -I'm talking in terms of the 500M-byte variety, way in excess of the 10Mbyte hard disk capacity that many neophytes believe is the storage penultimate - or for high-speed number crunching, this role is one of a low-cost intelligent terminal interconnected to mainframes. And I'll guess that a good many users who make this discovery quietly phase their personal computers into the closet and negotiate for a decent terminal, determined not to disclose their embarrassment and/or stupidity.

VIEWPOINT

Don't talk down to your users

READER'S **PLATFORM**

> DENNIS LA HOOD

How many times have you felt unappreciated for the extensive time and effort you've put into a project? If you hear any-thing from your

user, it usually revolves around some problem. Almost never do you receive a thank you. How come?

As computer people, we become quite proficient in the skills of our technology. We tend to be creative and have high initiative and above

average intelligence. We demand a lot from ourselves, and our standards are usually pretty high. It is this kind of everyday elitism that also gives us a false sense of our importance. Our true mission is not to be the creators of all good, but to be the facilitators of our users' needs. It is the users specific needs that result in the requirement for systems to be developed and for our existence. Without the need to build a system, there is no need for the architect. We sometimes lose sight of this. Consider the fol-

Our first challenge is that of be-

coming good listeners. The next time you attend a meeting with your us-ers, keep track of the following: How many times do we interrupt the user before they've completed a thought? How many times do we stop listening and start mentally developing a solution? How quickly do we start leading the conversation instead of acting as facilitators?

When we develop systems to our own understanding of the problem, we run the risk that the solution does not meet the user's expectations. Not meeting user expectations guaran-

tees dissatisfaction.

Talk up to users, not down to them. It tends to be a normal inclina-tion for DPers to think of themselves as smarter than most users. The fact is that the user is our boss, and even when we truly are smarter than our boss, we would never flaunt it. In most cases (if not all), the user knows more about the needs of the organization, and it is these needs that we must understand to attain the successful solution.

The user's knowledge, therefore, is most important to our success. In any learning environment, those that have the knowledge are treated respectfully by those who need to at-

tain that knowledge.

Don't promise more than can be delivered.

What's your reaction to an advertisement that suggests a product is a panacea? How do you feel about a salesman's claim that "It'll be totally transparent?" When building user expectations, be careful to limit yourself to deliverables. If each deliverable is an expectation met, then user satisfaction will grow, and mutual re-

spect will be enhanced.

These three basic "to do's," when practiced diligently, will earn the systems development professional the recognition and job satisfaction that the extensive time and effort put into each project deserve. Give them a try.

Measure your recognition before and after. You can always go back to the old ways. But wouldn't it be nice to hear "nice job" just once?

LaHood is director of computer and communications services at Agway, Inc. in Syracuse, N.Y.

INDUSTRY

from page 41

user costs, slower technological growth and a lot of hard feelings. I say "unwittingly" because most of their membership has more to fear from a handful of domestic competitors than from Japanese imports.

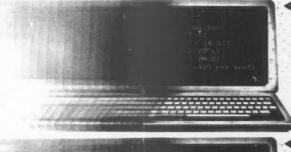

When not fighting the Japanese, these same groups will work over the Association of Data Processing Services Organizations, Inc. (Adapso), whose leading members are ill pre-pared to cope. Squeezed between the competition of emerging value-added ISDN facilities and newly emergent data processing service organizations offering banking services from within banks, brokerage services from within brokerage firms and the like, Adapso membership will find 1984 tough sledding.

It's hard to imagine that a Martian landing is high on the list of New Year's resolutions of anyone I know, although conditions for a landing are improved by the close proximity of Mars to Earth in May 1984. So I won't predict the surprise announcement of an Earth-Mars landing party. But it wouldn't be so farfetched if it did occur. What about Sputnik's surprise launch in 1957. Whatever, 1984 will be remembered for the high-tech surprises it will bring and, on balance, I forecast that we'll all be better off because of these. Hang on; Happy

New Year. Lecht is chairman of Lecht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

SOFTWARE & SERVICES

Micro link options growing

The personal computer's ability to access information on large mainframes has spawned major developments. In just two years, hardware and software com-panies have spent millions on micro-tomainframe development. The confusion surrounding this intensive period of development is now giving way to a market that provides a real choice.

When examining today's micro-mainframe products, you need to consider three major factors: function — what the micro-mainframe product is designed to do; integration; and transfer capability how the mainframe information is transferred.

Most products provide a method of downloading mainframe information to a personal computer, where micro soft-ware packages such as spreadsheets, word processors or graphics systems provide management analysis and reporting.

Integration is also a popular concept of this new transfer technology. A fully integrated micro-mainframe software system provides automatic loading of mainframe data directly into the personal computer's application software. The highest level of integration provides an added degree of flexibility by automatically loading mainframe data into multiple personal computer applications.

Few micro-mainframe products have achieved this level of integration. Most only build a separate file on the personal computer's floppy disk. After the mainframe information is transferred to this special "transfer file," an additional step is required to load the data into an application on the personal computer. True integration allows the user to specify which personal computer application will use the mainframe data. Then, when information transfer is initiated, it is automatically loaded into the personal computer application.

See JAN9 page 44

UFO/Cobol unveiled for CICS, CMS

HASBROUCK HEIGHTS, N.J. — Oxford Software Corp. has announced UFO/ Cobol, an Ansi Cobol-based IBM CICS and CMS application development system.

The product is based on a language consisting of Ansi Cobol statements with natural extensions to run in an on-line environment, a spokesman said.

A pseudoconversational mode of executing on-line programs is provided along with support of all CICS and CMS I/O facilities using standard Ansi Cobol extensions. The product supports calls to standard data base interfaces as well as call subroutines in other languages that conform to CICS or CMS requirements, the spokesman said. An interactive screen painting facility eliminates the need to separately assemble Basic Mapping Support maps. All IBM 3270 screens are treated as ordinary records in a Cobol program. Support of 3270 attributes includes color, highlighting, protection and testing for modified fields.

The Paint facility allows for the freeform design of 3270 screens on-line without code writing. Use of screens is defined, and all CICS or CMS code required to perform on-line transactions is eliminated and replaced with natural Cobol language extensions, the spokesman said. Program execution allows for the pseudoconversational execution of all programs with no preprocessing involved in program compilation.

The CICS/VS version is available immediately. The VM/CMS version will be available in the second quarter of 1984. The price is \$24,000 for the IBM DOS version and \$33,000 for the OS version. A 25% discount is available through April 1, the vendor said.

Oxford Software, 174 brouck Heights, N.J. 07604. 174 Blvd., Has-

DBMS for micros called lacking

SOFTALK

PAUL GILLIN

Think about that nice new data base management system (DBMS) you just bought for your microcomputer. Do you really need it? Is it really better than

the alternatives? Do you think you will be using it in two or three years? Jon Nackerud thinks not. The

founder and former president of Relational Technology, Inc., which markets Ingres, a relational DBMS, has been keeping a close eye on the micro DBMS market since the products began to proliferate last year

He is decidedly unimpressed. "Nothing on the market interests me at the time," he said in a recent interview. "It's like a gold rush. Everybody's sold their farm and got their wagon and headed west. They're digging a lot and finding a lot of fool's gold."

Just as spreadsheets were the hot item of the early part of 1983, micro
DBMS flourished at the end of the year. Driven in large part by the success of Ashton-Tate's Dbase II (which is now shipping more than 1,000 copies a month) the new entries have sought to capitalize on some of the obvious weak nesses of Dbase, particularly in the ar-eas of ease of use. All but a handful claim a relational structure.

Nackerud called Dbase II "an excellent DBMS," but added that it has spawned a host of imitators and a market direction that is far off course Micro DBMS vendors are attempting to sell a product without an application, he said. The frenetic quality of the micro software market typically results in a flurry of announcements on the heels of each successful new product, he said. Unfortunately, foresight gets lost in the chaos while market share becomes a vendor's critical considera-See GILLIN page 44

Are you in a MVS or VS1 SHARED DASD ENVIRONMENT?

DUQUESNE SYSTEMS Shared Device Management products provide a comprehensive solution to the problem caused by sharing data and devices between two or more computer syss. If you have a multiple CPU environment, then you need one or more of our Shared Device Management products. SDM provides global control over DASD. tapes and console devices with many benefits such as data integrity, elimination of operator errors and elim tion of redundent hardware

Shared Dataset Integrity, SDSI, solves the inherent data integrity problems caused by the simultaneous access of the same data taneous access of the same date by more than one system without the use of device reserves. SDSI greatly improves system performance by allowing the user to eliminate device reserves from existing programs without any system or program modifications.

Shared Tape Allocation Manager, STAM, automatically manages mountable devices, (tape and disk), in multi-CPU installations. Allocation decisions for shared device pools are made automatically, thus eliminating the potential for disastrous operator errors and more effectively using these valuable resources than is possible with

SCON

Superconsole is designed to provide a single console image for a multi system environment where console messages can be merged together to create a single stream on one or more designated consoles. The re-sult is a more streamline and productive operating environment. Operators will have to monitor only one console instead of many eliminating the need for redundent one console instead of meliminating the need for hardware and personnel.

SOFTWARE & SERVICES

Ingres Update Offered

Relational Technology, Inc. has announced Version 1.2 of its Ingres relational data base management system for Digital Equipment Corp. VAX-11 computers under DEC's VMS operating system.

The new version is said to feature improved transaction processing capabilities, better concurrency control, provisions for textual data and enhancements to Ingres/Forms, the company's forms management system.

In complex transactions, "begin/end" commands can be bracketed around any set of updates to preserve the consistency of the data base when records spanning several files are updated as single-user transactions, a

spokesman sai

Multiuser concurrency control is improved with page-level locking, and the software will automatically escalate locking to relation level when it is more efficient, the spokesman said. Ingres will also detect deadlocks when they occur and abort one or more transactions in progress.

Ingres/Forms users can create forms with "table fields" that let users view and update several records from a file simultaneously.

Ingres is priced at \$40,000 for a VAX 11/750 or 11/780 and \$20,000 for a VAX 11/ 730.

Relational Technology, 2855 Telegraph Ave., Berkeley, Calif. 94705.

UNIVERSITY OF MINNESOTA SCHOOL OF MANAGEMENT PRESENTS SEMINARS FOR THE SYSTEMS ANALYST

April 15-20, 1984 Radisson Inn & Yacht Club Superior, Wisconsin Sponsored by: MIS Research Center and Executive Development Center

"Seminars for the Systems Analyst" is a chance for companies to develop their talent from within and a chance for professional systems analysts to refresh their skills. These comprehensive seminars take a two-phase approach to systems analysis training.

PHASE A (three days) Systems Analysis and Design

PHASE B (two days) Interpersonal Skills for the Systems Analyst

For Further information contact: Gayle Winston Executive Development Center 324 Management & Economics Bldg 271 - 19th Ave. So. Minneapolis, MN 55455 612/373-3837

tact: NOTE:
Training at your site. . . we can bring this seminar to your site at nics Bldg, a significantly lower cost. For Pam Jensen at 612/373-3837

Options from page 43

Another element that differentiates the various micro-mainframe offerings is the method of transfer. This determines the amount of mainframe information sent to the personal computer and directly affects how selective the user can be in choosing information to download.

During the early phases of micro-mainframe development, the on-line screen was the standard unit of transfer. The only flexibility in selection was the option to transfer partial contents of an online screen, such as columns of budget figures. Despite its limitations, this screen-byscreen transfer has certain advantages. Because the transfer operates independently of the mainframe software, the mainframe system requires no modifications.

However, screen-byscreen transfers are somewhat limited for applications
requiring transfer of greater
volumes of data. Large-scale
financial analysis requires
many transfers to assemble a
comprehensive report. Nevertheless, screen-by-screen
transfer is excellent for bottom-line analysis.

The latest developments in transfer technology offer new solutions to this problem. One approach is file-to-

file transfer, which involves selecting part or all of a mainframe file and then transferring the file to the personal computer.

While this is an effective way to download entire files, it also has certain limitations. File-to-file transfer usually requires a special batch job to create the transfer file. As a result, it requires the involvement of DP personnel as well as a time commitment.

If the system is not fully integrated, this method will require an additional selection process and a separate function to load the information manually into the personal computer's application software. File-to-file transfer may also quickly fill up disk space, since large quantities of unwanted data are transferred.

The alternative is a new concept called data base sharing. With data base sharing, each on-line mainframe system is divided and then subdivided into manageable units of information which are actually mini data bases.

DP personnel are not required, and data base sharing is not restricted by file boundaries. Instead, data elements are grouped in logical units that are easily selected and transferred in an on-line environment. Multiple mainframe files may even be ac-

cessed and transferred in one request.

Assume, for example, that a manager wants to use the accounts payable system to analyze figures for one regional office. Part of the information resides on a ven-dor master file, and part of it resides on an invoice file. Both files are so large that a file-to-file transfer to a personal computer is not fe ble. Using data base sharing, the manager may select only the vendors and invoices for the particular regional office and then transfer only the selected material directly to the personal computer. If this data base sharing facility is completely integrated, the invoice amounts can be automatically loaded into a spreadsheet micro application at the time of transfer.

The future will bring even more accelerated development in micro-mainframe technology. As major hardware vendors such as IBM provide more sophisticated equipment and mainframe software vendors negotiate agreements with micro vendors, the product offerings are sure to become even more confusing. Future development will center around the data base sharing concept.

Feezor is product manager of Management Science America, Inc.'s Personal Computer Products Division.

DBMS from page 43

tion. "There's not a lot of thought about whether products have a long life," he said.

The root of the problem goes right down to the personal computer user, who is generally ignorant of data processing concepts and couldn't care less about the mechanics of a DBMS, he said.

"A lot of people are buying personal computers out of anxiety. They don't want to be left behind," he said. "I find most of their needs can be filled by using 3- by 5-[in.] cards." Such users are now bombarded by ads full of DBMS bells and whistles, but offering few ideas of how to use the newly functional data, he said. "Companies are coming out with a \$2 million advertising commitment which basically says 'you the consumer are too dumb to know the difference,' " he said. Again, users are buying the DBMS for fear of being left behind. Nackerud, who left Rela-

tional Technology last August, said he is far more impressed by application-specific products that have emerged on the micro. And therein lies the future of micro DBMS. Visicorp's Visicalc and Lotus Development Corp.'s Lotus 1-2-3 are "very good ways to present data," he said.

Nackerud predicts that micro DBMS in their current forms will cease to exist within three years. Instead, the data base will be incorporated into the application with ties to more elegant DBMS on the mainframe.

The market is still open for someone to declare a micro data base standard, one which can be accessed by all applications, he asserted. Distributed data bases will emerge with simple features at the micro level. More sophisticated functions such as backup and recovery, journalization and page locking will be added incrementally at various levels up to the mainframe.

Move up from your System/34 without losing your investment.

Save With twelve with the Corp., you of 32 be state and the Software Software PRIME PRIME FSCAPE/34 No. 10 PRIME P

Why rewrite your software just because you've outgrown your System/34?

With the ESCAPE/34 software package developed by Database Systems

Corp., you can migrate all your System/34 applications to the Prime 50 Series
of 32-bit computers. ESCAPE/34 makes up to 95% of your RPG II
statements compatible with Prime. Any remaining statements are
automatically flagged for you.

Then once you're in the Prime family, you'll never have to worry about growth again. All our computers are fully compatible, clear up to a system with 16Mb of memory and 5 billion bytes of storage. And you can keep growing, with the most versatile networking in the industry, fully integrated office automation software, extensive CAD/CAM capability, and over 1,000 third-party applications.

Send the coupon today for more information, or call our toll-free number. And help us save your software investment.

Only Lee Data's Universal Terminal System can satisfy all of your information processing needs... 3270, Async and personal computing.

Finally, there's a single, universal way to satisfy the individual information processing needs of all your people. From sales manager to accountant. From research to production. The Lee Data Universal Terminal System can do it all.

And our system is modular by design to provide you any or all of these costeffective, problem-solving advantages:

3270-compatibility plus more

Combine complete 3270 systemcompatibility with an innovative Lee Data design and you have a System that delivers greater convenience and flexibility.

Our System not only offers standard 3274-compatible local and remote control units, but now also provides combination local/remote controllers with a unique dual-host access capability.

In addition, you can choose from a full line of terminal capabilities, beginning with our cost-effective 3178-compatible display on up to our popular All-In-One Display which offers, in a single unit, four selectable screen sizes—including 132-column—a great advantage in program development, spread sheet applications and many others where flexibility is required.

3270-plus-Async: another cost-effective advantage

If your application needs currently find you switching between 3270 and VT100-style terminals to get the job done, Lee Data has a better way.

As part of our System, you can enjoy the further advantage of a 3270/Async capability that allows dynamic selection of 3270 and VT100 operating modes from a single Lee Data display. A simple command entered at the keyboard provides you access to applications

running on an IBM CPU, non-IBM systems (such as DEC, H-P or Prime), as well as timesharing services. Another Lee Data solution to simplifying your company's terminal network.

And now integrated personal computing too

That's right! Now our System also includes a sophisticated personal computing package that can easily be integrated into an existing Lee Data 3270 system.

With our approach, you get continued interactive access to hostbased files, plus all the advantages of

Designers of innovative systems for the information worker

LEE DATA CORPORATION

7075 Flying Cloud Drive Minneapolis, MN 55344 TWX 910-576-1690 professional business computing from the same Lee Data workstation.

Advanced features include a host file transfer capability, a single-board design, four standard system expansion slots and, of course, complete IBM-compatibility.

All these additional capabilities plus the same user-friendly Lee Data displays.

Plus these added benefits...

To any Lee Data System, add our unique Coax Eliminator products and realize additional savings of up to 85% in cabling costs alone.

Combine this with all the outstanding features already mentioned and you'll find a System offering everything you need for efficient, cost-effective operation.

Discover the advantages of our Universal Terminal System for yourself. For more information, call our system specialists toll free:

ADVANCED S SYSTEMS

Advanced Systems Concepts, Inc. has announced a performance simulation package for the Digital Equipment Corp. VAX-11 series of superminicomputers.

The Performance Simulation System reportedly allows a user to record one or more terminal sessions for the purpose of replaying them under a variety of sce narios.

A company spokesman said the package provides three main facilities: performance testing, application reliability and security.

The package is said to provide a transparent method of capturing one or more termi-nal I/O sessions. The spokesman said the input log may be edited as required and then replayed through "pseudo" terminals, allowing large terminal and/or transaction loads to be performed while not consuming signifi-cant manpower and terminal resources. During playback, the output of the simulated terminal session is captured, enabling comparison of the original output log against the playback output log, according to the spokesman.

The package is immediate-

available for license fees of \$4,995 for the VAX-11/780, \$3,495 for the VAX-11/ 750 and \$1,995 for the VAX-11/730.

Advanced Systems Concepts, 22 Hudson Place, Ho-boken, N.J. 07030.

SIGNAL TECHNOLOGY, INC. Quickstar

Signal Technology, Inc. has introduced a set of utility programs for Digital Equipment Corp.'s VAX-11 com-

Called Quickstar, the set consists of three interrelated programs. The first component, Quickstat, is used for interactive system status monitoring. It reportedly gives managers information on what system resources are being used, and it provides additional selective privileges, the company noted.

Quicktalk, another component of the program set, enables users to communicate between terminals. A user can send a message to any other user or connected terminal with a single command.

Quickchange was reportedly designed to allow users to change from one user name to another without logout and logon steps while retaining recording of accountsages, changes of

Quickstar is priced at \$1,700.

Signal Technology, 5951 Encina Road, Goleta, Calif.

STARTECH SOFTWARE SYSTEMS, INC. PC/Viewcom

Startech Software Systems, Inc. has announced the

defaults and checking of pri-vileges. PC/Viewcom system, a mi-cro-to-mainframe link that provides for the off-loading of host printing and automatic report distribution.

According to Startech, the system utilizes IBM's CICS teleprocessing monitor and the IBM Personal Computer to route batch reports or online transaction-generated reports to the Personal Computer printer or IBM 3280 or 3260 series printers. It is said to provide full-function provide

mainframe-type spooling fa-cilities such as forward and back spacing printers in the event of a forms jam, report class type queueing, report purging and user report di-rectory displays.

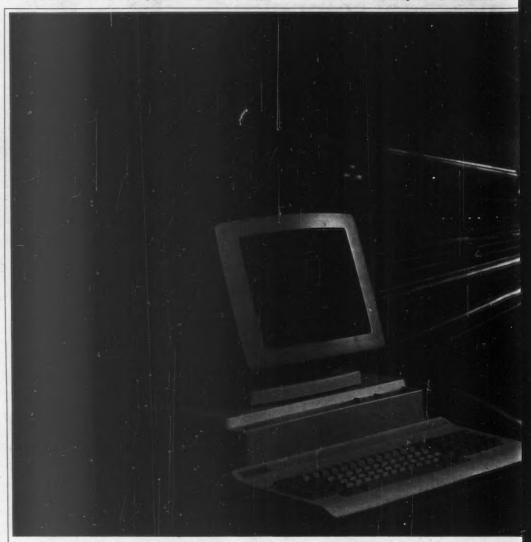

The system reportedly can drive up to three printers simultaneously per Personal Computer, and each device can print different reports from the host.

PC/Viewcom is priced at

Startech Software Sys-tems, 2539 Borough Place, Woodside, N.Y. 11377.

BUSINESS SYSTEMS AS-SOCIATES

Business Systems Associates (BSA) has announced a product that is said to allow users of Hewlett-Packard Co.'s HP 3000 to utilize Xerox Corp.'s Xerox 2700 laser

We Make the Addition Easy **Anywhere in the World. PHAZE**

In a time when the highly competitive information marketplace is expanding from a national to a global scale, today's corporations must decide how they will position themselves in this changing market. As a company that provides solutions to the problems that face modern business, PHAZE has taken its position in the world market with a commitment to excellence—not only in our products and people, but to our ideals of quality, service and value as well.

SOFTWARE & SERVICES

printer

BSA's Lasersoft software utility package, combined with an interface controller and the Xerox 2700, enables HP 3000 users to operate the laser printer to merge forms and data from existing reports, a company spokesi said.

The package features Printform, enabling the oper-ator to copy the contents of any form on the laser printer, including data and display enhancements.

A package including La-sersoft, the interface controller and the Xerox 2700 is available for \$23,995. BSA, 20942 Osborne St.,

Canoga Park, Calif. 91304.

UNIQUE AUTOMATION PRODUCTS, INC. HAP-Link

Unique Automation Products, Inc. (UAP) has announced the expansion of its UAP-Link file transfer soft-ware line to include modules for the IBM VM/CMS and Unix environments.

UAP-Link was reportedly designed to transfer binary or text files among mixed or matched computers. According to the vendor, the package features a layered protocol that corrects line errors and data compression capabilities that increase throughput, and the system

requires no conversion programs to reformat text data.

Additional features incontrol. clude single-user control, automatic transfer from dial automatic transfer from dial to logoff, file protection, command files, smart termi-nal mode and global com-mands. The release permits the following equipment to be interfaced to the new modules through standard seri-al ports: the IBM Personal Computer and Personal Computer XT; the Digital Equip-

ment Corp. Rainbow, VT180, RSX-11M, TSX-Plus and RT-11; and the Victor Technol-

ies, Inc. Victor 9000. The Unix version of UAP-Link is priced at \$950, and the VM/CMS version costs \$1,500.

UAP, Suite G, 15401 Redhill Ave., Tustin, Calif. 92680.

VIRTUAL MICROSYS-TEMS, INC. P-Bridge

Virtual Microsystems, Inc. has announced the P-Bridge system, which reportedly allows Digital Equipment Corp. PDP-11 and VAX-11 minicomputers to run software written for Softech Microsystems, Inc.'s P-system.

To accommodate four us-ers, the product includes four Zilog, Inc. Z80 microprocessors, 256K bytes of randomaccess memory and a bit-slice state machine.

The cost of P-Bridge ranges from \$5,000 to \$7,500, depending on the host CPU, and includes the board, software that allows it to run and a license for the P-system.

Microsystems, Virtual Suite 720, 2150 Shattuck Ave., Berkeley, Calif. 94704.

DIGITAL EQUIPMENT CORP. Mixed Packages

Digital Equipment Corp. has announced what the company termed "mixed packages" combining Decsys-tem-10 and Decsystem-20 computers with VAX-11/780 superminicomputers through DEC's Decnet networking

software.
In addition, the company announced average price reductions of 20% on Decsystem-10 and Decsystem-20 mainframe systems.

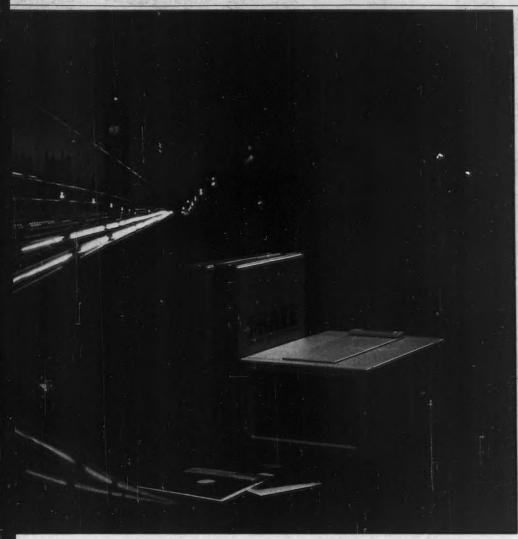

The spokesman said the mainframe/VAX packages are connected through Decnet to interchange data and files. A typical mainframe/ VAX combination, according to DEC, is a 1078 package consisting of a Decsystem-1091 mainframe and a VAX-11/780 superminicomputer with associated hardware and peripherals. This package is priced from \$499,500 and will be available in late spring of 1984.

DEC said price reductions of mainframe packages and associated software are effective immediately.

DEC, 146 Main St., May-nard, Mass. 01754.

DATAMETRICS SYSTEMS CORP Torch/IO

Datametrics Systems Corp. has announced the Torch/IO system, which it described as a measurement tool for Sperry Corp. 1100 se-Continued on page 49

Our PHAZE P3270 and P9000 product familes are state of the art, feature-superior, modular workstations that operate in the IBM-compatible environment. These products are designed to be added into existing 3270 environments with an ease and value not found elsewhere. They emphasize our commitment to providing the very best in manufacturing, sales and service world-wide. And in every product we build, our corporate commitment to producing the finest machines available is our starting point. Unlike other companies, we aren't striving for quality, we start with it.

It is this same determination to provide quality and excellence that allowed us to bring our first products from drawing board to volume delivery in less than one year. Now, as we continue to expand our product line, we will be satisfying the needs, demands and expectations of 3270 environments anywhere in the world. Because that market is dynamic enough to grow and expand for many years to come. So is PHAZE.

Grand Central: Where the prices are right. And the programmers are Naturally productive.

NATURAL Fourth-Generation Information Processing Systems

Smart shoppers from Idaho to New Mexico go to

Grand Central to get more for their money.

And smart management at Grand Central came to

Software AG for a way to get more from its programmer.

Faced with a need to overhaul its information systems, Grand Central started by giving its programmers a new set of productivity tools—highlighted by Software.

As a result, the programming staff found it could concentrate on problems and solutions, not procedures. And Grand Central's new systems started coming up in a

fraction of the time required by other approaches.

One example is the company's purchasing system, which allows purchase orders to be created over 50 times faster than before. Thanks to NATURAL, the basic purchasing system was written, installed and operational

Grand Central's experience is typical of what over 1000 other organizations have found that NATURAL is the premier fourth-generation productivity tool on the marker. No wonder it's the most widely installed system of its type in the world.

Whether you're interested in accelerated application development, improved information center functions, or laster access to the contents of large online data bases, NATURAL can be a big help. By making your programmers more productive, there's a good chance it can make your organization more profitable.

It's up to you. Call or write Software AG of North America, Inc., 11800 Sunrise Valley Drive, Reston, Virginia 22091, (703)860-5050.

OITWARE AG

SOFTWARE & SERVICES

Continued from page 47

ries processors.

Torch/IO was designed to help operations managers, systems programmers and performance analysts minimize contention for mass storage space. A spokesman said that when many high-use files migrate to a particular device or string of devices, contention for access to that device causes excessive queuing to occur, and I/O service times degrade. Using Torch/IO, the files, file portions and devices experiencing performance degradation can reportedly be identified.

Once identified, files can be reassigned to minimize mass storage contention and reduce I/O service times. Torch/IO can be leased at \$4,500 for a single CPU.

Datametrics Systems, Suite 201, 9940 Main St., Fairfax, Va. 22031.

VESOFT, INC. Security/3000

A security software package for the Hewlett-Packard Co. HP 3000 series CPUs has reportedly been enhanced to limit access to selected subsystems, programs and operating systems commands even after end users have logged on.

With Vesoft, Inc.'s expanded Security/3000 package, access to system modules is reportedly limited through a menu concept in which an account manager creates a file listing all the options that users are authorized to execute. The account manager specifies the file name.

Security/3000 has also been enhanced to allow passwords to be set at any terminal and to monitor and automatically log off display units when they remain idle beyond a preset time limit. The package licenses for \$2,400 from the company.

for \$2,400 from the company. Vesoft, 9218 Warbler Place, Los Angeles, Calif. 90069.

APPLICATION PACKAGES

ARTHUR ANDERSON & Co.

Arthur Andersen & Co. has announced an accounts receivable system for IBM System/38 computers in companies of varied structures and in varied industries.

Fin-Pac/38 reportedly was developed in RPG-III to utilize interactive and data base facilities of the System/38 for timely and accurate reporting and collection of accounts restricted.

The company said that data entry, validation, posting, file maintenance and inquiry are performed on-line. Other features reportedly allow users to print selectively only those reports needed at a particular time and provide for foreign currency conversions.

The price for the system is \$5,000, plus installation, according to the

Software Information, Arthur Andersen, 33 W. Monroe St., Chicago, III. 60603

PRIME COMPUTER, INC. Themis

Prime Computer, Inc. has announced Themis, an interactive logic

simulator for digital electronic de-

The product offers mixed mode simulation capabilities, which allow users to model and test at the switch, gate, function or language level, the vendor said.

Themis incorporates features for accurate delay modeling and four-state, three-strength metallic oxide semiconductor circuit simulation, which helps ensure accuracy in large-scale integration design, according to the vendor.

The product runs on Prime's 50 series of compatible, 32-bit, virtual memory minicomputers, including the low-end 2250, under the vendor's Primos operating system. It is compatible with the system software available on Primenet and Prime's X.25

standard networking and communications system.

The standard package is priced at \$20,000 for the Prime 2250 and \$40,000 for all other Series 50 systems.

Prime Computer, Prime Park, Natick, Mass. 01760.

GENERAL ELECTRIC INFORMA-TION SERVICES CO.

General Electric Information Services Co. (Geisco) has announced a software package that is said to provide comprehensive planning and control information for the repair and maintenance of operating facilities

Dubbed Repmain, the package was

designed for use in conjunction with Geisco's Mims system manufacturing package for IBM mainframes in the MVS and VM operating system environments. The vendor said Repmain consists of subsystems that can work separately or together

separately or together.

The planning and tracking capabilities of Repmain address the primary components of the maintenance process, including spare parts, work orders and purchasing, the vendor said. The system was designed to store and process detailed data for assets and cost centers, and items requiring preventive maintenance on a periodic basis can be entered into the system generating work orders describing the work to be done.

According to the firm, the Repmain system is written in Geisco's Continued on page 51

Finally a CICS query system that's as easy for the DP department as it is for the end user.

Introducing ExecuTrieve.

From the perspective of the DP professional, ExecuTrieve represents a dramatic breakthrough in query system efficiency.

No disruption. ExecuTrieve operates with your existing files in your CICS environment. It doesn't require costly system changes or any additional programming.

Low overhead. Through the use of our proprietary access method, users can browse or create complex reports with remarkably low I/O and CPU overhead.

Easy to install. ExecuTrieve can be installed and operational in as little as one afternoon.

Of course, efficiency is only half the story. ExecuTrieve makes as much sense

Introducing ExecuTrieve.

From the perspective of the end user.
ExecuTrieve is a remarkably simple, but

powerful query system.
Easy to learn. ExecuTrieve is a freeformat fully on-line system using simple
English syntax and requiring no computer
sophistication. An editor even allows you
to correct errors anywhere in the text.
Quick response. Our proprietary access
method means quicker response to even
the most complex queries. In fact, the

more complex the query, the quicker the response.

Complete reports. ExecuTrieve has a report generator and graphic capability. So it's a snap for non-pros to develop

effective reports.
Efficient for the professional. Easy for the end user. Any way you look at it,
ExecuTrieve is a query system worthy

Fort Lee Executive Park Two Executive Drive, Fort Lee, NJ 07024 (201) 592-0009, Toll Free (800) 526-0272

"IDMS/R is the perfect DBMS for the IBM 4300 user."

Frank Chisholm*

Because IDMS/R, with its Automatic System Facility, makes your IBM 4300 as easy to use as a personal computer.

The Automatic System Facility (ASF) is so comprehensive and easy to use that all an IBM 4300 user need do to develop an application is to define a relational record. ASF then dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation. In other words, the developer can witness the application being produced, literally, in seconds. This is what makes ASF a major advance over fourth generation languages. Thus IDMS/R is the perfect system for the IBM 4300 user with limited staff resources.

But suppose when you build a complex, high volume production application with IDMS/R, you desire outstanding performance. Typically, 5% of the data relationships (joins) in any application are accessed 95% of the time. With IDMS/R you can simply change these relationships to predefined joins and benefit from a dramatic boost in performance.

We call it Relational Fastpath. This is what makes IDMS/R a unique relational DBMS, and a perfect system with which to build production applications. In addition, IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, a full integration with personal computers and a complete line of integrated financial and manufacturing applications.

In summary, IDMS/R was designed to satisfy the requirements of the IBM 4300 user who wants to develop both production and end user applications faster and easier.

For further information, attend a Cullinet Seminar. Mail the attached coupon or call the Cullinet Seminar Center at 800-225-9930 (in Massachusetts 617-329-7700).

*Frank L. Chisholm is Cullinet's Executive Vice President. Frank has worked closely with Cullinet users and prospective users for more than six years. As a key member of Cullinet's management team, Frank has contributed heavily to Cullinet's database product development strategy.

SOFTWARE & SERVICES

Continued from page 49 fourth-generation, nonprocedural Mims system language and is said to enable labor requirements to be planned and measured against avail-ability and in planning inventory re-quirements. The vendor said all into formation pertinent to key maintenance activities can be clearly monitored and tracked. In addition, detailed costs, including spare parts, labor and overhead, can be tracked to work orders.

For clients currently using the Mims system, Repmain is licensed for \$25,000

401 N. Washington St., Geisco. Rockville, Md. 20850.

INTERACTIVE SYSTEMS, INC.

Interactive Systems, Inc. has announced an on-line data analysis and modeling package for Digital Equip-ment Corp.'s VAX-11 superminicomputers and Decsystem-10 and Decsystem-20 mainframes.

Called Mentor, the system is said to utilize literal names in addition to the conventional method of numerical row and column access. The vendor said that models developed in several different departments or divisions do not have to be laid out identically because Mentor can per-form a consolidation on multiple models that use the same identifiers.

Mentor also features an interactive report writer that permits flexible reporting of data in a model without affecting the integrity of the model itself. According to the vendor, once a report format has been created, it can be saved for future use, and various report formats accessing the same model are also available. The system can store instructions for future use so that a user wishing to perform a task only has to input the correct commands.

Mentor is available at an introduc-

tory license fee of \$5,000.
Interactive Systems, 131 Middle-sex Tnpk., Burlington, Mass. 01803.

HMS COMPUTER SYSTEMS, INC. AIM/3000 Fixed Asset System; AIM/3000 Billing System; AIM/3000 General-Purpose Report

HMS Computer Systems, Inc. has added three products to its AIM/3000 line of financial accounting software for the Hewlett-Packard Co. HP 3000

The Fixed Asset System provides property control for assets and calcu-lation of depreciation and produces the information necessary to meet governmental reporting requirements, a spokesman said. Assets may requirebe kept active for taxing purposes after they are fully depreciated for book purposes. The purchase price is \$7.000.

The Billing System is integrated with the AIM/3000 Accounts Receivable or can be interfaced with an existing system. It has total billing and invoicing capabilities with the ability to restart from any specific invoice. The system accommodates printing of multiple addresses and re-curring billings. It is priced at \$2,000.

The General-Purpose Writer allows the nontechnical user to generate customized reports in minutes. the spokesman said. It is interfaced with all AIM/3000 systems and in-

HMS Computer Systems, P.O. Box 35505, Building 9, 4524 E. 67th St., Tulsa, Okla. 74153.

PARA RESEARCH, INC. **Easy Text versions**

Para Research, Inc. announced it has enhanced two versions of its Case Text word processing package:
One version runs on IBM's System/34
and System/36, while the second version was designed to be used with the System/38.

The Easy Text for the System/34 or System/36 has an added 30,000word spelling checker that works in interactive or batch mode.

Enhancements to the System/38

cludes a preloaded data dictionary. It costs \$2,000.

HMS Computer Systems, P.O. Box 35505, Building 9, 4524 E. 67th St., ers and paragraph indenting, ers and paragraph indenting.

The Easy Text is priced at \$750 for the System/34 and System/36 and

\$1,500 for the System/38.

SOFTWARE CONSULTING SER-VICES, INC.; BRITISH STAN-VICES, INC.; BRI DARDS INSTITUTE

Pascal Validation Suite Quality Control; Standard Pascal Model Implementation

Software Consulting Services, Inc.

and the British Standards Institute have jointly announced the Pascal Validation Suite Quality Control package and the Standard Pascal Model Implementation system

The Pascal Validation Suite (PVS) system consists of 734 test programs that are said to exercise systematically a Pascal compiler to determine its ability to process programs written in International Standards Organization Standard Pascal.

The Standard Pascal Model Implementation (SPMI) is said to be a complete Pascal implementation,

Both PVS and SPMI are available machine-readable source code for \$450 each.

Software Consulting Services, Ben Franklin Technology Center 125, Murray H. Goodman Campus, Lehigh University, Bethlehem, Pa. 18015.

Here's How You Measure It In Financial Applications Software Fixed Assets ■ Accounts Payable/Purchase Control ■ General Ledger

You want quality products when you buy financial applications software, but it's tough to measure before the buying decision is

At Data Design, we measure product quality four ways.

 By product features that make it easy to implement, use and maintain.

 By our track record for reliability, the result of our extensive in-house Quality Assurance program.

 By effectiveness of our documentation, which is the industry's best.

 And by results, which we let you calculate for yourself by talking to any customer who has ever installed our financial applications

You'll find measurable quality in Data Design's Fixed Assets and Accounts Payable/Purchase Control systems. We engineer them with modular architecture, making them flexible enough to adapt

rapidly to changing financial requirements. Data Design's Data Mapping Facility, an exclusive feature of our advanced system architecture, gives users the power to adapt the system to changing conditions.

Our applications systems are written in ANSI COBOL and designed for large and mediumscale computers. Their quality has already been measured by hundreds of U.S. corporations many of whom use McCormack and Dodge, Software International, or MSA general ledger systems but came to us for Fixed Assets and Accounts Payable.

And you'll find the same measurable quality in Data Design's soon-to-be-announced General Ledger System.

See how we measure up to your needs. Call us at (408) 730-0100 from inside California or tollfree from any other state at (800) 556-5511

SOFTWARE & SERVICES

PLUM HALL, INC.

Programming Worksh nced C Topics; Unix Workshop

Plum Hall, Inc. has an-nounced three five-day introductory courses in the basics of programming in the C lan-guage, advanced C topics and programming in Unix.

According to Plum Hall, e seminar materials are available for unlimited internal use through a sublicensing agreement. The C Programming Workshop is an introduction to C for pro-grammers, while the Advanced C Topics seminar covers efficiency, portability and other software engineering topics. The Unix Workshop emphasizes software development.

Internal use of each course is priced at \$10,000.

Plum Hall, 1 Spruce Ave., Cardiff, N.J. 08232.

REMOTE COMPUTING SERVICES

CITIBANK Citiintegrator

Citibank has introduced

Citiintegrator, an IBM Personal Computer- and Personal Computer XT-based treasury management system that automates data collection and reporting of bank balance information and serves as a "window" to Citi-bank's electronic banking and cash management services

The software is said to provide integration with Lotus Development Corp.'s Lotus 1-2-3 and can link any independent data base using an autodial feature.

Citibank electronic banking services that can be automatically accessed through Citiintegrator include Citicash Manager, Cititreasury Manager and Citibanking.

Citiintegrator's data trieval and autodialing capability costs \$5,000; report consolidation costs \$7,500; and target balance consolida-

tion costs \$2,500. Citibank, 399 Park Ave., New York, N.Y. 10043.

ON-LINE **DATA BASES**

DOW JONES & CO., INC. **Dow Jones Spreadsheet Link**

Dow Jones & Co., Inc. has announced a microcomputerbased software product that provides an interface between the Dow Jones News/Retrieval interactive information service and Visicorp's Visicalc, Microsoft, Inc.'s Multiplan and Lotus Development Corp.'s Lotus 1-2-3 spreadsheets running on Apple Computer, Inc. hardware.

The Dow Jones Spreadsheet Link allows users to download data from News/ Retrieval into the spreadsheet. A version for the IBM Personal Computer will be available later in the first quarter of 1984.

Dow Jones, P.O. Box 300, Princeton, N.J. 08540.

TRAINING

Data Kinetics Ltd. has announced two training courses focusing on Information Builders, Inc.'s Focus fourthgeneration software system.

The courses, Focus Retrieval and Reporting and Focus Programming Workshop, are said to emphasize the user-oriented capabilities of the Focus language. In addition to reporting, the workshop teaches the more complex tools including defining, loading and updating files and data bases, a spokesman

It is intended for the experienced programmer interested in building systems. Focus Retrieval and Reporting is said to be a three-day course, and the Focus Programming Workshop is a five-day

Reporting course is priced at \$4,500, and the Focus Programming Wor Workshop

Data Kinetics, Education Department, 97 Norman St., Ottawa, Ontario, Canada K1S 3K5.

GOAL SYSTEMS INTER-NATIONAL, INC.

Design course; Vsam/BC COURSE

Goal Systems International, Inc. has announced two computer-based training (CBT) courses.

The Design course for new CBT authors, project managers or administrators is said to be an introduction to the development and administra-

tion of CBT courses.
The six-hour course discusses learning principles and their application to the construction of questions.

Vsam/BC is a four- to seven-hour course that is geared toward system and application programmers in IBM Vsam environments. course does not cover coding of utilities or requests.

Both Design and Vsam/BC are priced at \$3,780 for a permanent license.

Goal Systems Interna-tional, 5455 N. High St., Columbus, Ohio 43214.

BECOME A CICS CONSULTANT IN JUST TW

We know that it's tough for consultants to fit a weekday course into their hectic schedules. That's why SysEd offers special CICS training courses for consultants that you can complete in only two weekends.

Our intensive weekend courses in Command Level, Macro Level, Internals, Application Design and VSAM are designed to make even on-CICS programmers immediately productive in a CICS environment. Each SysEd course provides a true-to-life learning experience with "hands-on" use of the computer; up-to-date, practical information; a solid foundation in CICS fundamentals and insights into advanced materials; and individual attention from highly qualified instructors.

SysEd's special weekend courses for consultants are held regularly at our classroom/computer facilities in New York City, Chicago, San Francisco and Dallas. Because class size is limited, applications are on a first come, first served basis. For more information, call David Shapiro (212) 889-3386.

PBX nullifies net predictions

DATA

JIM BARTIMO

The problem with predic-tions is that they are always based only on facts existing in the present. So, the futurists of the

1950s predicted space colonies after the launching of Sputnik and robots after the advent of the home appli-

Because these futurists of yesterday had no information on the micro processor, they could not have pre-dicted the widespread use of computers, communications or even video game

Similarly, the futurists (read: con sultants) of the last three years have been predicting the widespread use of local-area networks. Based on the information available in 381, predictions that most peripherals and computers would share data over a Xerox Corp. Ethernet or a Wang Laboratories, Inc. Wangnet were justified. Users wanted connections; why

not wire devices together?
But things have changed in the last few years. First and foremos the private branch exchange (PBX) now offers local networks with their new nonblocking architectures. While transmission rates are lower over the twisted pair wiring of the

voice world, so is the price.

Not only is the PBX an attractively priced alternative to local-area networks, it is beginning to look as if See PBX page 54

Deregulation may oust vendors

By Lynn Haber CW Staff

SAN JOSE, Calif. — While deregulation will create significant new revenue opportunities for data communications equipment

and services suppliers, the associated disrup-tion will eliminate many vendors, according to a report recently released here. The report, "Data Communications Mar-kets: Impact of Deregulation," published by Strategic, Inc., projects that the shift of major carriers from universal service to a com-petitive price-based marketing environment will trigger fundamental problems in the data communications market and cause major headaches for the user community.

Among the negative effects will be a reduction in the quality of switched network transmission. This, in turn, will reduce the venues that would have otherwise accrued to the independent high-speed switched network modem vendors and force the restructuring of the data communications services submarket into specialized transmission and value-added network segments, as users scramble for reliable services

Deregulation will create a healthy market environment for the network manage ment product sector of the data communica-

tions equipment submarket," the report said. "This sector, which includes hand-held analog and digital test sets, along with technical control and network manage ment systems will increase from \$472 million in 1984 to over \$1.1 billion in 1988, showing an average annual growth rate of 25%.

On the other hand, Strategic pointed out, the associated need for leased services will create additional revenue opportunities for those multiplexer vendors that cater to the needs of the network service suppliers. The inevitable reduction of network reliability will also enhance the sales prospects of test and diagnostic equipment vendors.

The report also projects that new high-volume semiconductor technology, rapid progress in fiber optics, excess satellite capacity and the economics of digital transmission will combine to stimulate the introduction of a broad range of alternative methods of data

Strategic's report discusses the major influences that will drive this market for the rest of the decade and warns of potential problems that may affect corporate strategy. The report costs \$1,500.

Strategic, P.O. Box 9747, San Jose, Calif.

Digital's DR Soft/Net links micros

A software package that can reportedly link microcomputers running its CP/M operating system via any local-area network was announced here by Digital Research, Inc.

Introducing its new DR Soft/Net package, the company claimed the product enables of-fices to tie together diverse personal computer workstations using local-area networks such as Xerox Corp.'s Ethernet, Datapoint Corp.'s Arcnet and Corvus Systems Inc.'s Om-

The package is said to interconnect micros running any version of Digital's CP/M, CP/M

86 and Concurrent CP/M operating systems.

Networking features reportedly include file sharing, password protection and record and file locking. In conjunction with Concurrent CP/M, DR Soft/Net is said to provide a rent Cr/m, but Solicinet is seat workstation.

According to the vendor, users are able to share files and transfer information while

See LINK page 54

TUTORIAL

Communications manager to emerge from automation

With the communication of information fast becoming the most essential function of the automated corporate office, the emerging new breed called the communications manager must be a key decision maker in a company's information management process

The rapidly changing business world demands that voluminous amounts of mostly computer-generated data be delivered quickly and in usable form to many levels of decision makers and specialists throughout an organization.

Communications, however, costs enormous amounts of time and monev. which means that - for corporate survival — the escalating costs of processing information must be reduced. Also, the growing library of company-developed software must eventually be networked for optimum efficiency.

Many companies still believe that a well-tuned office automation capability can address these issues because of the manager's familiarity with in-house computer systems and the word and data processing needs of all company functions.

What top management does not

realize is that virtually all information management is now a communications matter and can no longer be the exclusive province of the data processing, information system or office automation manager. The communications manager the only one with an overview of every department's communica-tions needs — has to be involved in the decision-making process from the beginning.

Ideally, of course, the office automation manager should incorpo-rate communications into his sphere of expertise, and the communications manager should be knowledgeable about office automation. Even more ideally, their two departments should merge into one. At the very least, however, both should work together for cost-effective results, with each implement-

ing critical assigned functions.
For instance, just as a company's traffic manager (not the senior ac-countant) decides on the most cost-effective way of shipping a product, the communications manager (not the office automation manager) should be the one to choose the appropriate method of transporting information.

technologies Communications are now at a developmental level comparable to where data processing was 15 years ago and are moving forward rapidly. Data process ing tends to accommodate mainly traditional business practices and is not likely to advance beyond that stage unless there is a major shift in the way companies operate.

The advent of affordable data communications systems brought about by inexpensive microproces sors has significantly influenced the rise of communications technology. What is being done today in this area was not possible just two

integrated chips were not available.
As an example, the function of a

odem the telephone company currently rents for about \$75 per month can now be performed by a chip that costs only about \$30 to

Choosing the technology for transporting information requires strategic planning, and this logically falls within the scope of the comunications manager. In this capacity, he can reduce office automation's work load by selecting office equipment that not only has communications capabilities, but can take over some of the process ing load at remote workstations. Any excess loads on the central DP computer can then be shifted to the office automation side of the house or to the communications processor.

In addition to his role in office automation, the communications manager should play a vital part in a company's networking, which is See MANAGER page 54

PBX

from page 53

it could be the hub of the automated

Second, IBM has yet to give local-area networks its blessing by releas-ing a product in this field. Although hinted at time and again, IBM's entry into this market seems less and less

Big Blue seems content to stick to its Systems Network Architecture (SNA) method of connectivity with last year's introduction of the 3270 Personal Computer. IBM has not ignored the PBX network either, by in-

vesting heavily in Rolm Corp.

The final blow to local-area networks may be the high-flying predictions of the futurists. The gap between hype and reality has weakened the confidence of the data manager to invest too heavily in a technology stuck at the starting gate. When no one will invest in a technology, prices stay high, and when prices stay high, no one will invest.

But perhaps another new development, such as telecommuting, will make host-based networks the darling of the communications industry once more. Perhaps users were just waiting for the recession to subside before investing heavily in communications equipment.

There are many reasons to believe the local-area network is not dead but the same could be said of the space station and the robot.

MANAGER

from page 53

becoming more critical and complex as demand for information continues to increase.

Again, because of his overall view of an organization and its local, regional, national and global operations, the communications manager is in the best position to apply costeffective concepts and technology to the equipment and services required to solve business communications problems now.

The communications manager is also the one who will be ready with the right solutions 10 years from now. Communications is, after all, a long-term proposition, and today's communications manager must place more emphasis on planning than on the actual operations of communica-

The communications manager cannot afford to indulge in short-term solutions, except as they fit into the context of a more comprehensive strategic plan.

A long-term plan would allow cor-porations to buy three units now instead of committing to 20, because the next five units scheduled for purchase would provide more advanced technology and, probably, more capability.

Corporations, particularly those that are watching expenditures (and which ones are not?) are beginning to realize that the communications manager is in a position to save them millions of dollars - not just in direct costs, but also through more efficient operations and equipment

planning.

If communications is coming of age, so must the communications manager.

Lohara is chairman and president of Intelligent Communications Networks, Inc., Ventura, Calif.

LINK

from page 53

running an application.

DR Soft/Net does not require dedicating a separate workstation CPU to supervise networking, Digital claimed, and its multitasking capabilities also support transferring data between local and remote processors via a local network, thereby providing full distributed processing.

The product will be sold for \$1,000. Digital Research also announced a new compiler design, the first example of which, a compiler for Fortran-77, will be released in January, the company said.

The Fortran-77 compiler, priced at \$500, will be the first of five new compilers to use the technology and will run on Concurrent CP/M and CP/

M-86 operating systems.

Digital Research, 160 Central

Ave., Pacific Grove, Calif. 93950.

Science Dynamics offers ACT-LTBR

Science Dynamics Corp. has announced the ACT line trunk billing recorder (LTBR) a microprocessor-controlled terminal that records accesses to telephone operating company equipment.

The product may be used with both electromechanical and storedprogram controlled telephone company switching systems. The unit includes 24 electronic meters for each input to record the number of inbound and outbound accesses and their duration for each rate period

day, evening and night, according to

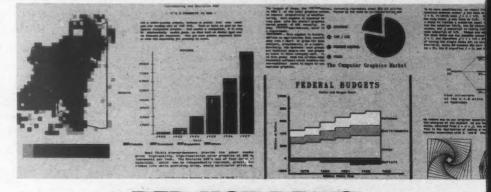

the vendor.
The ACT-LTBR terminal includes a built-in control panel for program-ming trunk and line parameters to suit each installation.

Each input is individually programmable to accommodate various types of loop, ground start or electri-cal and mechanical signaling, or units may also be programmed from a central site, according to the vendor.

Other terminal features include se curity code protection, battery-protected memory, a perpetual calendar and modular construction, the vendor said.

A basic ACT-LTBR to accommodate 16 lines or trunks is priced at \$3,150.

Science Dynamics, 1919 Spring-dale Road, Cherry Hill, N.J. 08003.

ED HOT DEMO. HE NEW ENVISION 430. F ITS NOT MORE T A COLOR PRINT IT'S FREE

You really can't lose. Because if we can't prove our new Envision 430 Color VectorPrinter™ is more than a color printer, we'll give it to you on the spot

WHAT YOU DON'T KNOW

What you might not know is that our new 430 has the uncanny ability to print high resolution pen plotter graphics. It can do that because we designed vector-to-raster conversion right into the printer.

And to make our 430 that much better than any other color printer you can buy, we also gave it the ability to print 100 characters per second in letter quality mode or 300 characters per second for drafts. This means our 430 gets your work done a lot faster It also means you can print high speed drafts, letter quality text, high resolution raster graphics and plot vector graphics—on the same page! So when you buy our new 430, you're really getting four very usable talents in one very versatile printer.

A VERITABLE PARADISE OF COLOR

Even if you're not a Van Gogh, our new 430 gives you the ability to create inspired color graphics. It prints any four colors of red, green, blue, cyan, magenta, yellow or black in a single ss. You can also blend any of these colors to create an entire spectrum.

And because a one-eighth inch solid color band is printed on each pass of the 18-wire printing head, our 430 creates your masterpieces with incredible speed.

UNCOMMON **VECTOR/RASTER GRAPHICS**

We made our 430 compatible with the Hewlett Packard 7220 pen plotter That means it's supported by a host of business, engineering, and scientific graphics software packages. And it gives you printed quality that's nothing short of superb. As well it should. Because we designed our 430 with exceptionally accurate horizontal and

vertical registration. It also prints raster graphics at 360 x 144 dots per inch for the highest resolution or 72x72 dots per inch for maximum speed. And to give you added flexibility, we gave our 430 the ability to print on plain paper and transparencies

LETTER QUALITY MAGNA CUM LAUDE

When you begin using our 430 you'll quickly discover you don't have to be a wordsmith to create letter quality documents with punch. Any of the character fonts can be mixed or

colored using host computer control. WORDS, 4444(characters), lines or pages CAN BE PRINTED in any of EIGHT COLORS, One letter quality font in 10, 12, and 18 PITCH and one high speed font in 10 and 12 PITCH ARE STANDARD. This means you can make MESSAGES STAND OUT You can MESSAGES STAND OUT You can COLOR specific words or IDEAS

And our 430 comes with optiona letter-quality character fonts like **BOLD**, italic, SCRIPT and ORATOR. Plus you

PROTOCOL CONVERTERS

CONNECTICUT PUTER, INC. Busster GR MICROCOM-

Connecticut Microcomputer, Inc. has announced a microprocessorbased interface designed to allow computers with IEEE-488 interfaces to communicate with devices that have standard R8-292 interfaces.

The Busster GR is said to facilitate connections between processors and printers, modems, terminals, mainframes and other computers.

Programmed through Basic commands from the host IEEE-488 computer, Busster GR reportedly fea-

tures selectable bit/sec rates from 75 to 19.2K, 110-char. input buffer and parity and word-length selection.

The unit, currently available, costs \$495 for a standard version.

Connecticut Microcomputer, 36
Del Mar Drive, Brookfield, Conn.
06504.

PROTOCOL COMPUTERS, INC. PCI 176

Protocol Computers Inc. (PCI) has announced the immediate availability of its new Series 100 protocol converters which, the vendor claimed, enables Ascii terminals to communicate with IBM hosts.

The Series 100 includes four mod-

PCI 176, which supports up to

seven personal computers and/or Ascii terminals and printers, according to the vendor.

■ PCI 167, which, the vendor said, allows IBM 3767 users to substitute Ascii terminals, printers, teletype terminals, graphics plotters and micros for IBM Systems Network Architecture (SNA) devices.

■ PCI 151, which reportedly allows non-IBM Ascii terminals and printers to be linked to IBM's System/34, 36 and 38 computers.

PCI 171, which provides Ascii to bisynchronous conversion for non-SNA IBM applications, according to the vendor.

Pricing for the PCI 171 and 176 starts at \$1,850 and at \$2,850 for the PCI 151 and 167.

Protocol Computers, 6150 Canoga Ave., Woodland Hills, Calif. 91367.

COMMUNICATIONS SOFTWARE

SOFTWARE DEVELOPMENT AND MAINTENANCE, INC.

Software Development and Maintenance, Inc. (SDM) has announced a communications software product that is said to enable IBM users with OS and DOS operating systems to transfer data to any other computer, terminal or remote entry device that supports 2780 and 3780 communications protocols.

Known as SDM3780, the software system emulates a remote job entry workstation for the IBM subsystems JES and Power. Also, SDM3780 can support file-to-file transfer as either the host or the terminal, using any combination of hardware and/or software subsystems it supports, SDM said. SDM3780 runs under any IBM DOS/VSE, OS/VS1 or MVS operating system. Communications are performed via IBM 2780 and 3780 Binary Synchronous Communications protocols using Vtam.

SDM3780 is priced at \$4,500 for

SDM3780 is priced at \$4,500 for the DOS version and \$5,000 for the OS version.

SDM, P.O. Box 668, 134 Spring Ave., Fuquay-Varina, N.C. 27526.

LOCAL-AREA NETWORKS

KANTEK, INC.

Kantek, Inc. has announced Kannet, a local-area network that can support up to 254 computers of dissimilar types with several different op-

erating systems.

According to the company, fully transparent format translations make it appear to each computer that all other computers are the same type it is. The operating systems supported by the Kannet system include Microsoft, Inc.'s MS-DOS, IBM's PC-DOS and Digital Research, Inc.'s CP/M 86 and CP/M 80. All operating systems may reside on the network concurrently, Kantek noted.

The Kannet system is priced at \$1,295 for each computer in the network.

Kantek, Suite J, 1370 N.E. 20th, Bellevue, Wash. 98005.

COMMUNICATIONS PUBLISHING GROUP, INC.

"Fiber Optics Coupler & Connector Patents"; "Fiber Optics Fiber & Cable Patents"

Communications Publishing Group, Inc. has published two reports concerning fiber-optic patent activity from 1963 to 1983: "Fiber Optics Coupler & Connector Patents" and "Fiber Optics Fiber & Cable Patents."

The reports contain fiber-optic patent numbers, descriptions of each patent, reproductions of selected patents and names of whomever was assigned a patent.

The reports cost \$125 each: Communications Publishing Group, P.O. Box 383, Dedham, Mass. 02026.

can define up to 196 characters to print both text and graphics. And to add versatility to your text creations we made our 430 compatible with the Diablo 630 ECS. Which means it supports the most popular text and word processing packages.

NO MORE RIBBON WASTE

Another nice little benefit of our 430 you won't find in other color printers is a four-cartridge inbooh system. Our separate color cartridges advance independently as each color is used. By doing things this way you don't end up wasting ribbon or running out of the color you want just when you want it. It also means lower cost per copy for you. Plus you also have a choice of high quality mylar ribbon cartridges and longer life nylon ribbon.

YOU DON'T HAVE TO PASS UP SPEED FOR QUALITY

Our 430 has been designed with an 18-wire printing head. This means that instead of having to pass over a line more than once to achieve high quality, our 430 prints letter quality characters in a single pass. It also does this with a great deal more speed because it never has to retrace the same line.

And while we're talking about speed, you should know we built our 430 with

a print control microprocessor which tracks the carriage through a unique closed-loop servo system and adjusts for carriage speed and direction during dot placement. That permits it to print while the carriage accelerates. Which is another reason it gets your job done a lot faster.

we think you'll be impressed when you see our 430. But that's not enough to get you to pick up your telephone and call. So if we can't prove it's more

to get you to pick up your telephone and call. So if we can't prove it's more than a color printer, we'll give you a 430. Free.

Introducing COMPAQ PLUS, the first high-performance portable personal computer.

The makers of the COMPAQ™
Portable Computer, the industry standard, announce another breakthrough—the COMPAQ PLUS™
Portable Personal Computer. No other personal computer can handle so much information in so many places.

The new COMPAQ PLUS offers an integrated ten-megabyte fixed disk drive in a portable.

Plus a bigger payload

How much is ten megabytes?

Enough to tackle jobs that can't be conveniently handled on most personal computers.

A mailing list of 100,000 names and addresses.

Inventory records on a quarter million items.

The entire San Francisco phone book, with room left for Peoria.

Your most used programs can be permanently kept on the fixed disk drive of the COMPAQ PLUS, ready to call up and run.

Store a library of accounting programs—payables, receivables, general ledger, and payroll—with the company's books. Then take them to a board meeting or a branch office.

Your inventory control program and your inventory records can go with you to the factory. Your building specs and your project management programs can go with you to the construction site.

The high-capacity portable multiplies the productivity of every program it runs.

Plus more programs

The COMPAQ PLUS runs all the popular programs written for the IBM® Personal Computer XT, available in computer stores all over the country. And they run with no modification whatsoever.

You're buying a computer to solve problems. Why not have more problemsolving programs to choose from?

Plus a traveler's toughness

A true portable has got to be tough. The COMPAQ PLUS is.

Its fixed disk drive is designed specifically to travel. Rough roads and hard landings don't bother it because a specially designed shock isolation system protects the disk from jolts and vibration.

All the working components are surrounded by a unique aluminum frame with cross-members that

strengthen it side-to-side, frontto-back, and top-to-bottom.

Does a portable personal computer really have to be this tough? Take a look at your briefcase and then decide.

Plus a lot more

The COMPAQ PLUS comes with a 360K byte diskette drive for entering new programs and copying data files.

The COMPAQ PLUS also works with optional printers, plotters, and communications devices designed for

The COMPAQ Portable, the industry standard in portable personal computers.

The problem-solving power of a highperformance desktop personal computer can now go where you need it.

IBM's personal computer family.

It has two IBM-compatible slots for adding optional expansion boards. With companion programs, they'll let you network with other personal computers, communicate with your head-quarters computer files or add memory capacity if your needs grow.

When you see all that COMPAQ PLUS has to offer, you'll be pleasantly surprised by the price. The fact is, it costs hundreds less than comparably equipped desktop personal computers.

See the first high-performance portable personal computer. The COMPAQ PLUS—performance, programs, productivity. Plus problem-solving power.

For the name of the Authorized Dealer nearest you, call 1-800-231-0900.

COMPAQ.

Newest PBXs to provide exclusive service

By Nell Weber

When hand-held digital calculators first hit the market, they were marvels of miniaturization and electronic design. They were also very expensive. But for people who needed that level of computational power, they were the only game in town. Then, only months later, similar or even more sophisticated models were flooding the market at vastly lower prices.

Today, users and potential users of digital telephone-switching systems are about to face this dilemma. "Fourth-generation" private branch exchanges (PBX) are now on the drawing boards of several manufacturers, replete with sophisticated enhancements that sound utterly fantastic. In the near future, a number of these new systems will be brought to market.

Like the digital calculators, these new PBXs will at first be relatively expensive, and, for a time, they will have their share of bugs.

Predictably, most companies will follow the classic pattern of waiting to buy only when the product is attractively priced and thoroughly proven. However, those few companies that do "take the plunge" will gain an exclusive period of valuable service from these new switches.

The fourth-generation PBX will incorporate all of the current capabilities and will provide vastly greater data transmission capacity and speed-along, as well as a host of "convenience" features.

But even more important, the new PBXs will integrate voice and data transmission capabilities into a single device. Thus the stage will be set for the PBX to act as a complete protocol and format translator, capable of linking virtually any two computers. In effect, then, the new generation of PBXs will soon open the door to data bases anywhere in the world, regardless of the computers involved.

At the present time, a company that requires a great deal of data transmission through its PBX system must employ a separate data switch, which generally costs between \$100,000 and \$200,000. With the fourth-generation PBXs, however, no additional data switches or expensive external moderns will be required.

dems will be required.

Hence, the quandary of companies in search of a state-of-the-art PBX. In making their decision to buy or to wait, these companies will need to consider a number of factors.

Companies employing a

moderate number of lines (200-600) and a comparatively low volume of transmitted data should be especially careful in projecting their future requirements before investing in a fourth-generation system. It may be a long time before such a company can utilize all of the features available with today's sys-

tems, much less those of fourth-generation systems.

The capability to handle data traffic better is in most cases the prime rationale for acquiring a fourth-generation system. Thus, companies that do not have extensive data transmission requirements will do well to question the need for such an additional transmission and the second state of the second second

vanced PBX.

Furthermore, these companies will take comfort in the proven reliability of third-generation systems. As the product of several years of design experience, third-generation PBXs are virtually free of problems associated with voice transmission.

Fourth-generation sys

tems, however — designed "from scratch," so to speak — will require a period of time before they offer a comparable level of reliability in the realm of data transmission.

Neil Weber is director of Product Marketing at Harris Corp.'s Digital Telephone Systems Division.

NETWORK HEALTHCARE

DATA COMMUNICATION NETWORKS AREN'T LIKE PEOPLE BUT...

One thing's for certain. Poor advice early in the design stage, the wrong equipment, or inadequate product support could make your network very sick.

We can help prevent that. Meet ComDesign's data comm "doctors". They are a group of dedicated, service oriented data communication specialists. Talented, qualified, and helpful, they dispense the application engineering answers that will keep your network in the pink. For large networks or small. And you don't have to be a ComDesign customer to take advantage of this service. As a matter of fact, you'll

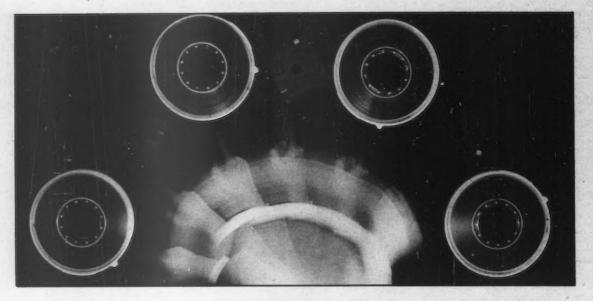

never even need an appointment. Just use the **toil-free** number below. The doctor's always in. (800) 235-6935 (805) 964-9852 in CA

The right application software package does the choice get blurred?

Help is on the way from Computerworld this January

The ever-increasing requests for office software; the demand for tools by programmers and users alike; the bewildering array of products to choose from -- make the job of selecting applications software challenging and difficult. Here's what you'll get from this January's Special Report on Applications Software to make your job easier:

- The packaged decision: Should you buy, or develop in-house?
- Methods of selecting the best application for your needs.
- Modifying and maintaining packaged applications.

- · Integrating applications from multiple vendors.
- Conversion stories.
- integrating micro with mainframe applications.
- · Applications for manufacturing.

You'll get information on who should select packaged applications. You'll read about the impact of application generation tools on selecting packaged solutions. And you'll get pages of factfilled ads for products to keep you upto-date on just what's new. If you buy, choose or recommend applications software products - you won't want

to miss this special report in Computerworld's January 30th issue.

And if you've got packaged software products our readers want to know about - then you need to get your ad to us by January 13 to be included in the Special Report. To reserve space in this issue, call Don Fagan, Vice President Sales/Marketing; Ed Marecki, National Sales Director, or Kathy Doyle, Marketing Support Manager at (617) 879-0700. Or, call one of the sales offices listed below:

IN DEPTH

The rise of the technical writer

By Gene Knauer

In the rush to develop systems that meet the immediate or imminent needs of a management information systems environment, documentation often receives low priority. And traditionally, technical writers have lagged behind systems and user staff in both salary and status.

But the picture has changed significantly in recent years and continues to brighten. With greater acceptance of documentation as an important element of systems development, pay and responsibilities for writers are growing.

In a typical development situation, the programmer builds a system along linear patterns of logic. He usually jots down notes about a system in the order that his ideas come. These notes rarely constitute concise system documentation but can form an initial draft.

Enter the technical writer. From amidst the twists and turns, contradictions and

omissions of the programmer's notes, the tech writer must synthesize and extract a clean, clear set of user instructions for the new computer system. The writer seeks to uncover the hidden logic in a program and then to convert it into a hierarchical pattern, with a main function at the top and subfunctions below.

"The writer is always seeking," says John Urton, a technical documentation consultant at the Federal Home Loan Bank in San Francisco. "He's always asking, 'What's this? Why isn't this working? Let me see that.' Once the system is designed, people want him to go away."

Technical writers in most MIS environments are usually activated about the time that new systems design and implementation staff are moving on to other projects. Friction often results from the technician's lack of interest in a system that is already history to him. The questions tech writers ask about the system to be documented force the programmer/

The technical writer is, at least in some systems departments, an equal member of the development team. Projects are now more user-driven, demanding an effective liaison between user and technician — namely, the technical writer.

IN DEPTH/THE TECHNICAL WRITER

analysts to rehash old work.
"Often," says Lois Pryor, co-owner of Echols & Pryor Technical Com-munications in Berkeley, Calif., "the questions are seen by the systems staff as intrusions on their thought processes, which are now focused on equally complex and challenging new systems." When the tech writer uncovers mistakes or weaknes a system that reflect badly on its authors, friction between the two groups may turn into open hostility.

Pryor's partner, Carla Echols, re-members when "tech writers were traditionally the people who did the typing in the offices in Silicon Valley. They had the status of clerks." This situation contributed to the friction.

But changes in the development environment are now promoting

Armed with new knowledge about systems technology and the development process, the user expects more from documentation, based on his experience with manuals from popular micro packages. Dry technical prose isn't acceptable anymore. Graphics, tutorials, flowcharts, on-line help screens and quick reference cards are part of the new generation of documentation tools.

greater harmony in the workplace. Among the improvements is a grow-ing overlap in the responsibilities of systems staff and writers.

A variety of schemes for organiz-ing documentation efforts, subspecialties within tech-writing ranks

and a burgeoning tech-writer consulting market now exist.

Environmental portraits

At MIS environment A, tech writers are regarded as editors. Given specifications by the systems

staff, their charge is merely to edit

rather than extensively rewrite.
At environment B, tech writers are equal members of systems development teams. Using a homegrown methodology, the tech writer helps monitor the project and serves as the repository and synthesizer of all information. Documentation is developed before systems, in some cases, are ever designed. Drafts of these early documents, which describ how a system will work or should work, are circulated among programmers as part of the design process. Eventually, revised versions of these initial documents become user docu-

At environment C, no tech writers are employed. Since the users are technically oriented, they don't need documentation simplified to the normal level of nontechnical user friendliness. The shop's systems analysts, in addition to their other duties, develop all necessary documentation.

Several changes in the MIS envi-ronment are creating a trend toward option B, where the systems staff and technical writer are peers working together closely through the development process.

Change number one is the growing decentralization of data processing environments. Projects are now more user-driven. The technical writer, along with the applications/business analyst, is one of the prime liaisons between user and technician. Translating technical details to readable, concise instructions, the tech writer acts as the user vangard, the inter-preter of a foreign language to business English.

"The user is getting more sophisti-cated," says writer Mary Ann Tharaldsen of Wells Fargo Bank in San Francisco. "He can do a little pro-gramming and understand the programmer better than before." Users have come to realize that systems are an important adjunct to the business environment, an adjunct they must control and understand and demysti-

Change number two is the emergence of hundreds of thousands of user computerphiles into the world of data processing through the microcomputer revolution. Armed with new knowledge about systems technology and the development process the user expects more from docu-mentation, based on his experience with manuals from popular micro packages. Dry technical prose isn't acceptable anymore. Graphics, tutorials, flowcharts, on-line help screens and quick reference cards are part of the new generation of documentation tools. They are

System 1032 for VAX

DBMS Bliss

Now there's software that users can use, programmers can program, and managers can manage.

Don't despair. If you've been frustrated waiting for ideal data management software, your worries are

The answer is System 1032" DBMS for your VAX. And you can sample it at no risk or obligation. Here's

Responsive Assistant

System 1032 provides a commonsense relational approach to data management, without the burden of relational calculus or SQL. Users easily grasp both simple and complex data relationships, and assis tance is right at their fingertips. Special function keys make it easy to complete commands, quickly learn new ones, and see explanations of options and parameters, even in mid-command. So there's no need to struggle with a manual in the lap or consult an already-hassled

Best of all, System 1032 is fast and pretty. It answers complex queries almost instantly and produces presentation-quality reports with single commands

Designer's Delight

Don't think it's a toy, though. Sophisticated applications designers can

program in any VAX language, including System 1032's built-in blockstructured language, and still access all of System 1032's powerful data management tools. A complete range of data types, format definitions shared data structures, and other advanced features ensure that System 1032 easily satisfies the most demanding needs.

If you're a manager, you'll especially appreciate System 1032. Your users and programmers all use the same unified command language and data base concepts, so communication between them is easier than ever. And System 1032's careful human engineering drastically cuts vour training costs and increases productivity

Plus we exploit the best of the VAX architecture with shareable native code, asynchronous I/O, and propri-

System 1032™

Send to Giselle Valdes

etary inverted files-efficiently! So, unlike other software, System 1032 won't force you to buy more memory, disk space, or CPUs.

Software House has an impeccable decade-long reputation for reliable software and responsive technical support. System 1032 is the offspring of System 1022," the most widely used DBMS for DEC mainframes. Its step-oriented commands and relational design have proved themselves in years of use at hundreds of sites. And System 1032 has undergone extensive field-testing to ensure that it works right the first time for you. Although new, System 1032 is already the most mature DBMS available for your VAX.

Convince yourself. Try System 1032 on your own VAX with your own data. A 60-day trial period costs just \$85. Verify our claims, browse through our manual, and test our hot-line support service. Compare and benchmark System 1032 against other software, relational or not. at whatever price. Then sit back in bliss and watch your end users and programmers accomplish more, faster than you thought was possible.

So'don't delay. Call us today, or send in the bliss coupon

Introducing the TI 855 microprinter. No other printer says better so many ways.

Feature for feature, no other microprinter can match the versatility, compatibility, reliability and productivity of the OMNI 800° Model 855 microprinter. Here's why.

Two Printers In One. With the TI 855 you get the speed of dot matrix draft copy. Plus the precise clarity of the most advanced matrix technology for letter-quality print. It's two printers in one — at one low price.

A Great Family Name. Texas Instruments is known for providing the world with the industry standard for printers—the TI 810. TI builds the same reliability into every 800 series microprinter. Both the 855 and the data processing Model 850 are part of the expanding TI line of high-performance, low-cost microprinters.

Hardware Compatible. The TI 855 microprinter is compatible with all major PC hardware. And it provides both serial RS232C subset and "Centronics-type" parallel as standard interfaces.

Software Compatible. The TI 855 uses industry standard escape sequences for compatibility with virtually all third-party software. And for those with proprietary software needs, a model is available with ANSI standard escape sequences.

Tough Font Modules For Quick Char-

Tough Font Modules For Quick Character Change. Three font modules can be inserted into the front of the printer at one time, and are accessed individually. Each contains both draft- and letter-quality character sets. They're easier to use, more reliable and more durable than traditional metal or plastic daisy wheels.

More Productivity Than Any Other Microprinter. The 855 offers both friction and tractor paper feed, to handle all types of word and data processing applications. A quick-change snap-in cartridge ribbon. Raster and mosaic graphics. And intelligent printing which maximizes document throughput — regardless of format. Get the printer that makes for better

Get the printer that makes for better information systems. For more information visit your nearest TI authorized dealer or write Texas Instruments Incorporated, P.O. Box 402430, Dept. DPF-083OW Dallas, TX 75240. Or call toll-free: 1-800-527-3500.

TEXAS INSTRUMENTS

Creating useful products and services for you.

IN DEPTH/THE TECHNICAL WRITER

contributing to clearer, simpler manuals and broad-ening the scope and importance of the tech writer's job.

On-line documentation

On-line documentation is a growing phenomenon. The costs for production and lack of flexibility of hard copy along with the cost for quick and frequent updating are two of the major reasons.

In one DP environment,

user acceptance of on-line documentation was monitored closely. The results showed a strong trend in favor of the new approach. When the on-line screens were first introduced, the ra tio of printed lines of documentation to viewed lines was 115 to 1. Within a year, that figure dropped to 45 to

Changes in documentation can be written and released on-line in the same day. Special user interface programs are also becoming a part of the on-line documentation environment. Programs are available that adapt to the user's level of knowledge. The programs prompt the user to give enough information in the query to direct him to the proper section of documentation.

If the user is experienced and knows exactly what sec-tion of documentation to search for, a short query,

properly worded, is suffi-

Value of graphics

Whatever one's language skills, visuals are one of the most effective methods of conveying information. Consultant John Urton uses IBM's Script software as an aid in formatting and editing. "It helps me with information mapping, breaking down documentation into concepts and processes and

procedures and generally smaller untis."

Urton uses graphics enth-usiastically and sets up so-phisticated referencing through tabs and color cod-ing. "Often all you need is the outline of a procedure, says writer trainer Carla Echols. "The graphic repre-sentation can be much more effective than prose." Echols claims writers are starting to do more flowcharting and less writing.

Logisticon, a systems house in the Silicon Valley, went a step beyond simple graphics for its documenta tion. It hired a cartoonist. Technical writer Dierdre Morgan worked with the artist to develop a manual that is entirely cartoons for a modular microcomputerbased warehousing and distribution package. Capitalizing on the use of flowcharts, diagrams and basic English, Morgan tailored the manual to speak simply and concisely to truck drivers working in warehouses, transporting merchandise from delivery docks to storage.

Artificial intelligence

Even experimental "knowledge information processing" expert systems have affected the world of DP documentation. At the National Magnetic Fusion Energy Computer Center in Livermore, Calif., consultants are working on a so-phisticated user interface for on-line documentation.

The center serves the country's magnetic fusion community — physicists and engineers at universities and corporations. But the documentation department confronts most of the same problems as its peers in financial MIS environments: interpreting and answering user queries, amending and implementing changes in documentation, extrapolating the hidden logic and functional sequence of a system from a technician's notes.

A team of consultants at the center is working on an experimental program that takes a user's on-line query, looks for terms in the ques tion that might be key words in the documentation in question and then displays those passages of the documentation in which the key words appear. If there are no key words in the query, the program a) prompts the user to paraphrase the question until key words are produced or b) routes the query to a consultant's terminal at the center. In this case, the user would receive an answer or a referral to a specific passage of documentation, unaware that a human being was on the other end of the communications link.

Micro workstations

Other MIS environments are experimenting with using microcomputers as

1983 was a very good year.

NCR introduced more major data processing products than any other high tech company.

NCR closes out its first century with one of its most impressive technological achievements, the NCR 9300. It's the first full 32-bit VLSI mainframe designed for business applications. The 9300 delivers the power of a mainframe at the price of a mini.

New computers for 1983 included the UNIX*-based Tower, a microprocessor with the power of traditional minicomputers. NCR also added new multiprocessors to our top-of-the-line 8600 mainframe series.

We introduced the NCR Personal Computer specifically designed for the business/professional market. It provides dual processor capabilities to enhance performance, and is the first personal computer designed with networking in mind. It can function as an offline computer, an online terminal to your mainframe, or networked with other NCR Personal Computers and other popular PCs.

We strengthened our position as the world's leading supplier of retail point-of-sale terminals by introducing a wide range of new products. Included is a terminal that looks up the prices of over 14,800 items stored in its own internal bubble memory.

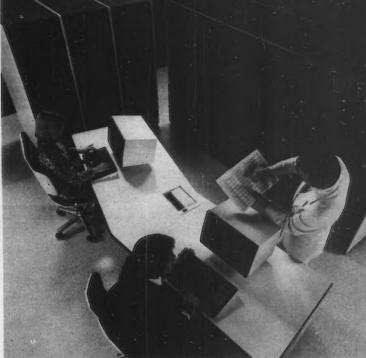

Our number one position in automated bank teller machines produced the technology for self-service airline, ski lift and service station terminals. We are the leader in electronic banking networks and electronic funds transfer.

Why did NCR introduce all these high technology products in 1983? We wanted to get a good start on our second hundred years. For more information, call 1-800-CALL-NCR. In Ohio, 1-800-543-4470.

And 1984 will be even better.

NCR

1884-1984 Celebrating the future

People Express, one of America's fastest-growing airlines, chose an NCR 8600 series computer system to handle online

reservations. NCR is a leader in online transaction processing equipment, communications and system software.

The Tower microprocessor packs a lot of computer power in a 29" x 27" x 7" package. Up to 16 operators, local or remote, can access the Tower at one time.

Debit cards and Electronic Funds Transfer became a reality in 1983. NCR is the leader in EFT technology today!

Bubble memory technology provides resident mass memory in the terminal for automatic price look-up for supermarkets and other retail stores.

The new NCR Personal Computer offers unsurpassed monochrome or color graphics. Industry standards are used throughout so the applications programs you need are available now.

New drive-through ATMs help the world bank on the go. NCR helped pioneer the regional electronic banking network and has installed more Automated Teller Machines worldwide than any other supplier.

The NCR 9300, a roomful of computer power in a 50-pound box, was a big breakthrough in 1983. Add this 32-bit VLSI mainframe for a complete system price of less than \$46,0001

IN DEPTH/THE TECHNICAL WRITER

LAPROVE YOUR

rames while enhancing your communications by giving you action and integration with the micros in your organization.

workstations for tech writers. Lead Documentation Editor T.R. Girill of the Livermore center is managing the development of such a system. "We're experimenting with a pro-gram that automatically splits the editing tasks between the micro and the mainframe. Global changes af-fecting the entire document are handled on the mainframe. Smaller, single-line or word changes take place on the micro.'

According to Girill, the main file the writer is working on resides on the mainframe. Little pieces of the file are shipped, as needed, to the micro, a handy feature when editing among the 16,000 pages of on-line documentation that the center pro-

Another type of expert system the Livermore center is experimenting

with involves the concept of a decision tree. According to Girill, the system is another type of query response mechanism that accesses a general subject or portion of docu-mentation and then leads the user down a "tree" with alternatives, until the problem or user query is fully defined. The system ends by routing the user to that part of the docume tation that answers the question.

Writing subspecialties

Evidence of the emergence of technical writing as a data processing specialty is in the proliferation of writing subspecialties and in the consulting positions they have spawned.

Documentation has established itself as one of the best liaisons between the technical and user worlds. As more users enter the world of data processing, their introduction to systems will be greatly influenced by the quality of systems documentation.

There are now methods analysts (who specialize in putting together standards and procedures manuals), indexers (they anticipate under what names a user might seek a bit of information in a manual, then set up the indexing and cross references), hardware and marketing and operations writers, to name just a

For the writer with several years of experience and an interest in consulting, rates currently range between \$20 and \$50 per hour. Hardware documentation, usually requiring an engineering or electrical background, may bring hourly consulting rates of \$75 or more for qualified professionals. But the duration of consulting assignments for the tech writer is usually much shorter than for systems analysts and program-

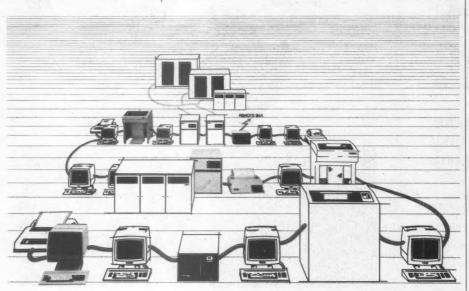

This difference may account for the steady attrition from within do-cumentation ranks. More money and greater responsibility lure tech writers to programming, analysis and management at rates of 50% to

75%, according to one recent survey. At a salary in the range between \$15,000 and \$35,000, a technical writer can take his chances as a consultant (usually as an independent or subcontractor) or become an analyst, a technician or a manager.

Clearly, documentation has established itself as one of the best liaisons between the technical and user worlds. As more users enter the world of data processing, their intro-duction to systems will be greatly influenced by the quality of system documentation. The clear-thinking, pragmatic, diplomatic and hardworking technical writer of today can look forward to a future with multiple opportunities within MIS.

3270 Networking: No More No Man's LAN.

Imagine, 3270 Processing, IBM-Compatible Personal Computing. Local Area Networking. And SNA Compatibility. In One System.

Imagine a system that successfully settles the uncharted territory of 3270 local networking-that "no man's LAN" of unlinked and unrealized potential.

Imagine a system that delivers the power of 3270 processing, and the flexibility to build two local area networks from a single controller. Imagine being able to attach up to 120 devices to that controller. Or attaching four distinct controllers—and multiple coaxial links of up to 10,000 feet each—to any of those LANs.

Imagine the economies of a system that handles that networking with standard 3270 coax. That requires no commitment to special architectures or non-standard LAN technologies. And that, thanks to a multi-drop, station-to-station design, can eliminate thousands of feet of new coax.

Of course, such a system would have SNA compati-bility. But it would also have a set of capabilities to dramatically increase throughput, while reducing hardware and support costs in any environment. Capabilities like multi-host and multi-personality support, application and address switching, and system printing. This system would have multi-user personal computing "built into" the network—allowing you to

assign true 16-bit computing power, maintain overall MIS control, and share expensive disks and printers.

Such a system would boast an intelligent display station that displays a mastery of ergonomic and aesthetic design. With multi-screen formats, anti-glare aestrenc design. With muin-screen formats, anti-giare screen, low-profile keyboard, and a tilt-and-swivel pedestal with the smallest footprint in the industry. Such a system would also include a full line of printers. Imagine. 3270 processing. IBM-compatible personal

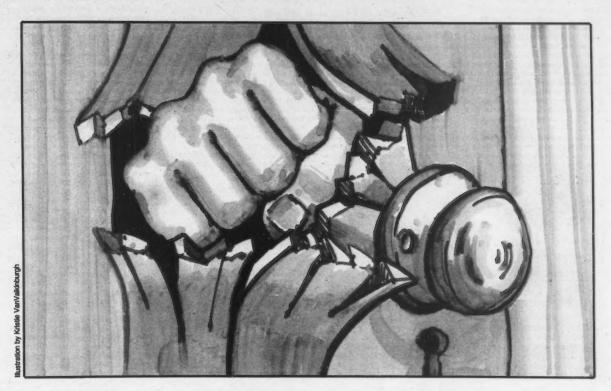

computing. Versatile, economical, powerful local area networking. In one system.

Braegen has imagined just such a system. They have designed it. Built it. And called it the ELAN " System.

such a system sparks your imagination, give us a call. We know the feeling. The Braegen Corporation, 525 Los Coches Street, Milpitas, CA 95035, (408) 945-8150; TWX: 910-338-7332.

IN DEPTH

Information systems — the power in your hands

By David G. Robinson

Businesses are coming to view their information systems as strategic weapons. With maturing products, intense overseas rivalry and increasingly fragmented and specialized markets, information systems can be powerful competitive tools when applied aggressively at the right time and in the right place.

Information systems are being used to strengthen communications with customers, analyze market trends and drive down operating costs by streamlining manufacturing and distribution facilities. While these applications sound familiar, the difference in the 1980s is the way in which companies are focusing their information systems efforts on those areas of the business that will yield the greatest competitive benefit.

Logically, this direction should result in new and challenging opportunities for the information systems organization. At last, the information systems function is putting its "beast in the basement" status behind it and becoming a real partner in managing the business.

Unfortunately, accomplishing this task is far from easy. Because of the way strategic systems operate within the business, traditional organizational structures and business/information systems relationships act as an impediment to the pursuit of strategic systems.

Supporting business changes

Business and information systems managers must first understand that information systems do not produce any strategic value at all. The systems themselves are, in fact, intrinsically worthless. The value that accrues from the use of information systems is a function of business changes that the systems support, not a function of the systems themselves.

Most strategic business moves involve some sort of change: in business process, in culture, in managerial approaches or in the marketplace. It is the strategic changes developed by management to respond to perceived opportunities or Information systems cannot be strategic by themselves. They must be linked to corporate strategic thinking and become a vital part of the fundamental business changes which that thinking produces.

IN DEPTH/INFORMATION POWER

known competitive threats that are the source of value when informa-tion systems are used strategically. Information systems operate to facilitate or make possible these fundamental strategic business changes.

Consider the following example. A large division of a manufacturing company determined that its inventory levels were excessively high, especially in its extensive distribution network. Corporate manage ment had decided that working capital levels supporting the business had to be reduced or the business could not be maintained and would be considered as a candidate for divestiture. One of the major efforts management had initiated to combat this problem was an improved distribution system. Unfortunately, it was not until well into the systems effort

For the past decade, information systems organizations have been taught, often painfully, that the key to success is to "serve the user." In reality, what the user wants is frequently inconsistent with the strategic direction of the corporation, especially in times of strategic change.

that the fundamental business problem was identified: The company had adopted a customer service stan-dard that resulted in excessive inventory levels.

This basic business assumption had to be reviewed along with the other logistics and product movement processes that had been considered part of the system. The inven-

tory problem became solvable only when the company began to rethink its entire distribution philosophy and adopted comprehensive alterations in its approach to servicing customers. After the problem had been reconsidered, the nature of the new distribution system also changed, and much of the original design work had to be scrapped.

The lesson here is that informa tion systems cannot be strategic in and of themselves; they must be linked to a body of strategic thinking and be vital to the fundamental changes which that thinking produces

Insiders or outsiders?

Many information systems managers would like to play a leading role in furthering strategic systems thinking in their organizations. For those who are already members of the senior management team, this desire is relatively easy to fulfill. Many other information systems managers are considered members of upper-level management as defined by their organizations, but they are often excluded from the "inside" discussions that surround the formula-

tion of new business strategies.
In addition, most information systems organizations are managed to respond to requests from the operat-ing level of the organization. This structure fundamentally limits the information systems department's ability to deal with strategic issues in the corporation. Communications between strategic managers and op-erating managers are often imperfect, especially at those times when strategic management is attempting to change the views of the bulk of operating managers in the corporation as part of a new strategic thrust Yet these same operating managers largely determine what the informa-tion systems organization will pro-

vide for the corporation.

As a result, the information systems organization is commonly out of touch with strategic thinking in the company. Even when communication between information systems and the business is good, the former is still one step removed from strategic thinking. For the past decade, information systems organizations have been taught, often painfully, that the key to success is to "serve the user." In reality, what the user wants is frequently inconsistent with the strategic direction of the corpora tion, especially during times of stra-

tegic change. Among our clients, we have seen the dilemma of the information systems manager lead to several unde sirable results. First, we frequently encounter large, expensive and risky business efforts which, while responsive to the "bottom-up" require-ments of the organization, are incon-sistent with the "top-down" strategic view of the business. Sec-ond, because these tactical systems requests vastly outnumber strategic opportunities, the strategic systems opportunities are frequently lost in

Third, because operating managers are not usually positioned either to develop ideas for strategic change or to have the authority and responsibility to implement them, they are unable to work with the information systems organization to plan for strategic systems without the substantial involvement and backing of top management. That support is frequently lacking.

the shuffle.

Finally, because this set of structures frequently results in the wrong systems being built, substantial amounts of information systems re sources are being misapplied.

One company's experience shows what can happen when a strategic system is managed using conventional approaches. Senior management

buys these fully integrated facilities for application development

METAFILE® is bursting with potential.

The METAFILE System gives users of IBM PCs, XTs or compatibles all the software they need to grow their own unique solutions to information management problems

With the METAFILE System you can easily prepare text and create data bases, forms, menus and reports - and tie them all together, integrated. Either on the spur of the moment, or during the develop-ment of structured formal applications for others to use

Unlike multi-function systems that force together a collection of software pieces, the META-FILE System is - from its very foundation — a single integrated architecture. One high-level language drives all its facilities No need to learn (or teach others) a variety of inconsistent languages

If your company has an Infor-mation Center, the METAFILE System helps meet your goals of faster application development, personal computer software standardization, and the training of users to design their own solutions

The most appreciated advantage of your METAFILE System may be ease, or speed, or freedom. But the net result, in all cases, is higher productivity.

- Fourth-generation language, for higher productivity
- Data base management, giving you extensive capabilitie
- Text management, with many word processing features
- · Ad hoc inquiry, for on-line reporting
- Prompt-assisted commands, for easier use
- On-line documentation, to speed training
- Extensive debugging aids, for faster troubleshooting
- Report generation using single
- Display management using direct screen presentation
- Menu building for custom
- application interaction Forms generation for user-defined data entry
- Menu-driven assistant for easier use

IN DEPTH/INFORMATION POWER

The quality of strategic communication between business managers and information systems managers can be substantially improved if systems managers attempt to couch every issue in basic business terms. had identified improved marketing information as a strategic business issue and had chartered an internal task force to address and resolve the problem. Because the effort was regarded as a "data processing" project, it was delegated to a task force of managers two organization levels below the senior executive staff.

As the design effort progressed, the operating manager on the task force began to expand the scope of the effort and add additional demands, including a major overhaul of the order entry system. In time, each task force representative injected his area's system "needs" into the project. As the size and complexity of the system's functional specifications grew, new technologies were introduced into the design to support the increased level of functional sophistication.

The MIS group at the com-pany felt that the user deds were too complex and that the technology to be used posed significant risks. The group was unable to al-ter the view of the task force, however, and had no clear process of appeal to se-nior management. Communications between the two groups broke down, and se nior management was clearly troubled at the scale of investment involved, particularly when the value the system would add to the business was becoming increasingly unclear. After watching the project flounder for two years, senior management finally intervened and retained the services of an outside consul-

The delays in the project resulted from the narrow technical debates which had overshadowed the underlying business assumptions used to assess potential benefits. Another problem was the "loading up" of the project with lower level needs not related to the project's original strategic purpose. By refocusing the project on the business benefits the system would support, the company discovered that many elements that yielded the most value to the business were the least complex technically and the least expensive.

When senior management was presented with these results, it rapidly authorized implementation of the high-payoff elements. The technical debate had continued for more than a year; implementing the high-value elements took less than three months. The original system plan would have cost more than \$4 million over several years and carried a high risk of failure; the high-payoff elements cost less than \$100,000 and provided immediate strategic benefit to the business.

What can be done

Fortunately, there are actions that information systems managers can take to overcome obstacles and provide leadership in the pursuit of strategic systems for their organizations:

their organizations:

1. Start talking in business terms. Information systems managers have long had a tendency to favor a technical focus over a business focus in their discussions with management. Two factors contribute to this tendency. First, information systems managers are often excluded from many business discussions, especially those dealing with strategic business issues. As a result, they tend to retreat to their own turf, where their expertise is unchallenged. Second, the past five years have brought an explosion in the number of technical issue that must be mastered,

No waiting. No kidding.

"Today we are installing the industry's only native IDMS Payroll/Personnel System using ADS/O."

INTRODUCING SUBSCRIPTION **SERVICE:**

A Cost-Effective Alternative to **Traditional Remote** Computing Services or In-House Processing.

Now you can couple the benefits of a professionally managed remote computing service with the predictable cost associated with in-house processing. It's called Subscription Service, and it's available today from Martin Marietta Data Systems.

PREDICTABLE COST

Subscription Service is designed to keep your DP operation within budget. It curbs cost overruns by delivering a block of resources at an affordable fixed price-

almost like the inhouse machine. But, unlike the inhouse machine, vour service doesn't degrade at peak-use periods, just when you need it most. And, when you're out of gas, you can

upgrade easily. No lease payout. No hardware moves.

NO MYSTERY PRICING

Subscription Service unbundles the remote computing service offering to take the guesswork out of prices. Resource capacity and support levels are clearly defined and easy to understand. You buy what you need. Nothing morenothing less.

MORE TIME FOR YOUR USERS

It's a fact, a professionally managed computing service offers you freedom from day-to-day operational problems, giving you more time to focus on solutions to user problems. And, with an inventory of packaged solutions and productivity tools at your fingertips, the time and resource requirements to create a solution are greatly reduced.

COUPLE FREEDOM WITH AFFORDABILITY

Subscription Service is proof that you can get the best for less. All subscribers are linked to Martin Marietta's powerful host computers, providing the most up-to-date computing resources. You can depend on: ☐ Solid, stable, thoroughly-tested hard-

ware, software and personnel

Response time and throughput associated with IBM's fastest processors

- ☐ Access to hundreds of productivity tools and application systems
 - ☐ Responsive technical consultants available around the clock

DISCOVER HOW SUBSCRIPTION SERVICE CAN WORK FOR YOU

If your budget for computer operations exceeds \$20,000 per month for either remote computing service or in-house processing, then find out how much Subscription Service can save you. Or how much more service you can get for what you are currently spending. Or both! Simply return the attached coupon or call toll-free (800) 638-7080. In Maryland: (800) 492-

PHOENIX LEASING

with management, and senior managers are sometimes uninterested in a strategic systems planning exercise. In these cases, there are still opportunities to begin exercising leadership in the right direction.

Every information systems organization is required to submit an an-nual budget. This budget and its defense provide an excellent opportunity to present convincing, high-quality thinking about the relationship between information systems and the business

In addition, some information systems organizations have found the production of an "Information Systems Annual Report" to be an effective starting point in restructuring communications with senior manage

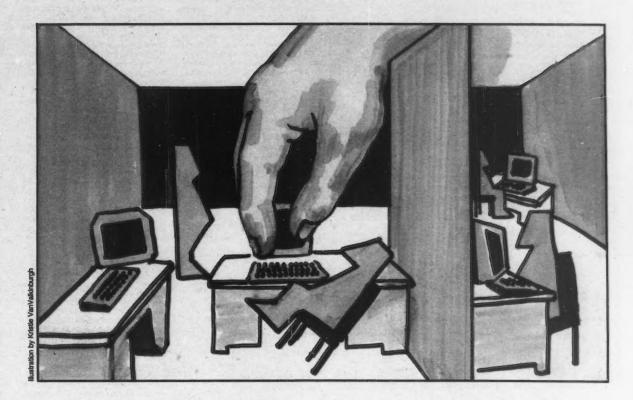

Such a report lays out issues the information systems organization feels are critical for senior manage ment to understand and can be written using internal information systems resources and then forwarded to senior management for review. While seldom solicited, this type of report has proven useful for several organizations in establishing a dialogue with senior management

No longer can the information systems function operate simply as a passive service organization if strategic opportunities for the use of such systems are to be realized. The systems organization must forge a link with senior management so that its resources can be channeled into the strategic thrust of the busines Linking these two interests is often difficult, but it is vital.

As a specialist in the planning and management of information systems in large organizations, he has consulted to manufacturing, transportation, financial and government groups.

IN DEPTH

Where information power can change your company

By Gregory L. Parsons

Significant advances in the related technologies of computers, telecommunications, data access and storage devices, graphics equipment and software have created a spectrum of opportunities for managers. The speed, cost, size and capabilities of the new information technology continue to improve rapidly, and there appear to be unlimited applications that could be "computer enhanced."

However, in spite of this new wealth of technological advances, the ability of most businesses to assimilate and apply information technology lags far behind the available opportunities. Although many authors have noted this shortfall over the years, the effect in the 1980s of this "strategic gap" is much more critical. Senior executives increasingly feel that their businesses should receive more benefit from technology investment, but few

are able to articulate the impact information technology has or should have on their businesses.

The Executive's View

In a recent study, three senior executives not directly involved in the technology were asked to assess the impact of information technology on their businesses; their responses were quite different. A divisional president of a large industrial corporation said: "I think information technology contributes at least 3% of our bottom-line profit margins. Operationally, we couldn't get through the week without the system support, and in the marketplace, I don't think we could hold our market share without the technology. But this is mainly a gut feeling; I can't back up these estimates with numbers or specific reasons."

The chief strategist for a major U.S. bank said: "The technology is our top strategic concern, not because it outweighs everything else, but because we are unsure what to do with it. Although we have a strategy for the marketplace, the technology issues seem to be eluding

Information technology can fundamentally change whole industries by altering product life cycles or speeding distribution. It can create new business rivals, new consumer demands, new profits. How are you putting information technology to work in your company?

(Reprinted from "Information Technology: A New Competitive Weapon," by Gregory L. Parsons, Sloan Management Review, Vol. 25, No. 1, pp. 3-14, by permission of the publisher. Copyright 9 1983 by the Sloan Management Review Association. All rights reserved.)

Figure 1. Three-level impact of information technology

us. On the one hand, it's important - everybody agrees on that, but then we end up doing projects based on a series of piecemeal technical decisions. We can't seem to grasp the bigger picture."

The chief financial officer of a large consumer goods manufacturing company explained his view of information technology: "We've really cleaned up our data processing act since the mid-1970s. The systems run well and now we're mainly finetuning. I expect we'll be doing primarily maintenance programming in the foreseeable future. I feel that we've gotten most of the benefits from the technology currently available. As the cost comes down, mor projects will be financially justified, and then we'll do them.'

From these remarks and the com-

ments of many other senior executives questioned about information technology, two issues are clear. First, the importance of the technology varies widely from firm to firm. In some, it is a top-level strategic concern; in others, it is basically per-ceived as an administrative convenience. Second, there are no commonly accepted guidelines or framework for measuring the importance of information technology to a business. Most planning approaches do not take into account the strategic relevance of the technology. Although executives claim a "feeling" about the technology's importance, few could explain why it was so important. Even fewer could articulate how important information technology should be for the future.

Clearly, information technology is significantly affecting many firms and is now or will become a strategic concern for many over the next five years. It has been estimated that more than \$1 trillion will be spent on information technology investments during that period. Figure 1 presents a three-level framework to help senior managers assess the current and potential impact of information tech-

nology.

This framework was developed from a two-year study of more than a dozen companies. It is based on a recognition and analysis of the competitive environment and strategies of business and focuses on the opportunities for firms to use information technology to improve their competitive positions. In order for information technology to become a viable competitive weapon, senior management must understand how information technology may impact the competitive environment and strategy of the busines

Impact at industry level

At the global level, information technology changes the fundamental nature of the industry in which the firm competes. When information technology changes an industry, it may affect the nature of the industry's products and services, the in-dustry's markets and/or the industry's economics of production.

Products and services. In some industries, information technology may change the very nature of the industry's products and services: Information technology may substantially alter the product life cycle and significantly increase the speed of distribution.

For example, because of advances in information technology, the prod-ucts and services of the publishing industry are undergoing significant changes. As the industry moves from a paper product to an electronically based one, the time and space constraints for product development and distribution are shortened. Authors and news sources are preparing electronic manuscripts and text, which are sent to publishers on floppy disks or directly from computer to computer. Electronic manuscripts are edited on word proces-sors, typesetting is computerized and graphics are generated by computers. Promotional materials are distributed by telecommunications, and readers can buy the product from the publisher's electronic data base.

The time lag between an idea for a new product and its mass distribu-tion could be virtually eliminated. Small publishers who can adopt the technology have substantially

N NETWOR offers you 100 solutions to your post-divestiture telecommunication problems.

As telecommunications and data processing managers, your success depends on keeping up to date with changing tech-nologies. At COMMUNICATION NETWORKS you can choose from 100 information-packed se help you succeed.

You'll learn how to survive the transition into the competitive telecommunications environment resulting from the AT&T divestiture. You'll discover new applications in Local Networks, Satellite, Bypass/DTS, Public and Private Data Networks, Interconnection, Micro Networking and new management technologies

management technologies.

COMMUNICATION NETWORKS gives you twelve sessions focusing on "Network Technologies." Thursday, February 2, is "Microcomputer Networking Day," a full day devoted to teaching you how to get more from your PC than just standalone applications

You may even choose to develop specific skills in one of the nine full-day "In-Depth" seminars. "In-Depth" seminars will be held on January 30, one day prior to the official opening of COMMUNICATION NETWORKS.

In just five years, COMMUNI-CATION NETWORKS has become the leading professional communications conference and

reduced the product development cycle, gaining a significant advantage over large competitors

competitors.

Markets. Information technology can significantly change the markets of some industries. For example, financial companies will face a market of computer-literate consumers and businesses that will demand electronically based products and services. Information technology has already created a new product line called cash management systems, which are offered by large banks. As information technology erases traditional geographic market limitations, financial services companies must now compete in a global market. The emerging technology for automatic teller machines (ATMs), home banking and electronic funds transfer is making more sophisticated financial products and services possible and increasing the overall demand.

Production economics. Information technology developments may change the basic economics of production in some industries. In the distribution industry, information technology is dividing businesses into two categories: those that have computerized warehousing and inventory control and those that have manual operations. Businesses with computerized capabilities have the ability to serve a nation-al market and are breaking the industry pattern of re-gional distribution. Such na-tional distributors also enjoy other advantages, such as economies of scale in marketing, software and hardware. Because of control problems and high costs, businesses with manual operations are limited to local markets by their technological position.

Information technology will also affect the production economics in some industries by changing the industry's historical trade-off between standardization and flexibility. Some equipment manufacturing plants have already used information technology to achieve unit costs that remain essentially constant, whether one unit

or one million units are produced. This new potential will effectively remove many of the traditional competitive advantages in these in-

dustries.
Information technology will reduce historical economies of scale in some areas while extending them in others. Because of the monitoring, controlling and coordinating potential of the technology, larger and more efficient facilities can be

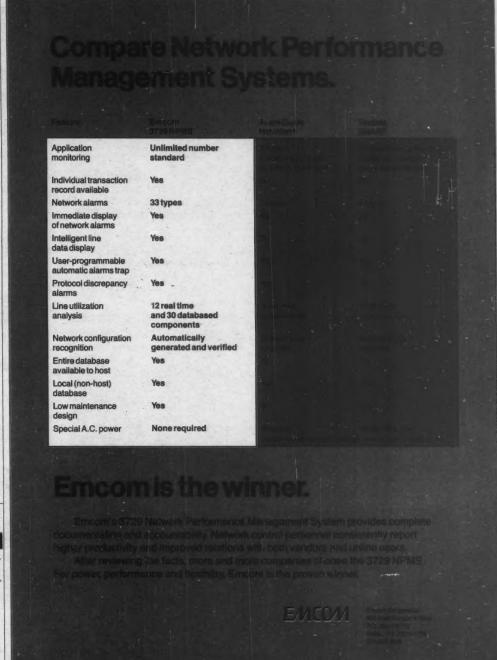

built which will capture new economies of scale by utilizing machinery, space, energy and specialized labor more efficiently.

There are critical implications for firms that compete in industries in which information technologies are changing the nature of the business. Traditional rules of competition will change, new economies of scale will evolve and entry barriers will erode in one area and

spring up in others. There will be new competitors, new products and services, new distribution channels and different levels of demand and elasticity. Product life cycles will be shortened, and the value-added stream of the industry will be redistributed.

Before management can consider the long-run impact information technology will have within the firm, it must understand how information technology is changing the industry. This effort is entirely consistent with most views of corporate strategy, which begin with an understanding of the external environment of the firm. At the industry level, the impact of information technology ranges from major (in the banking industry, for example) to minor (as in the aluminum industry).

To link information technology effectively to the

SAS... Power and Flex to Meet All You

strategic needs of the firm, manage ment must anticipate the impact of information technology at the industry level before it occurs so that strategies can be developed to posi-tion the firm appropriately in the new industry setting. For example, given the current rate of develop-ment in telecommunications and office technology, videoconferencing may become a major substitute for me business air travel in less than 10 years. This change would significantly affect the airline industry's business travel market. Today's chief executive officer and strategist must address a crucial question: What impact will information tech nology have on our industry over the next five to 10 years in terms of products and services, markets and production economies?

Impact at firm level

The impact of information techno logy is determined by the specific mpetitive forces facing the firm M. E. Porter, in Competitive Strategy, described five forces that form the industry structure and the com-petitive "arena" for each firm in the industry. These five forces are the buyers, the suppliers, the substitutes, the new entrants and the rivals within a particular industry. Each firm in every industry faces these five generic forces; the specific manifestations of these forces determine a firm's profitability and range of potentially successful strategies. This framework for competition provides a useful vocabulary for defining the key issues facing a firm today and in the future

Competitive forces

As information technology affects the products, services or operations of a business, it may change the relationship between an industry and its suppliers. For example, the use of sophisticated quality control systems by the auto industry is forcing steel producers to become much more quality conscious. This matter is even addressed in contracts, and it will change the mix of suppliers. As industries become much more dependent upon information technology, the supplier will become an important force for a firm to consider when planning strategy.

The technology will also change the level of sophistication of some industries' suppliers of funds to financial institutions are increasingly sophisticated (and consequently more powerful) because information technology allows them to monitor and redeploy investments with astonishing ease. Competitively, firms in industries in which information technology is affecting the supplier relationship must be concerned with how this change will affect a supplier's power in dealing with the industry.

Information technology will also affect the buyer relationships of industries as new products, services and distribution channels evolve. Buyers in the banking industry can now choose products and services from a variety of channels. The buyer/industry relationship has been fundamentally changed by ATMs, point-of-sale (POS) terminals and electronic home banking. Information technology has also aftered the product mix of industries as firms have packaged information around a basic service. For example, a large distribution company has enhanced

its distribution service by offering retail customers computer-generated inventory management reports on a fee-for-service basis.

Information technology also affects the rate of substitution in some industries. For example, a large overnight carrier has recognized that electronic mail may substantially substitute for paper-based communications and is developing an electronically based business. Information technology will speed up the life cycle of many products by shortening the development process through computer-aided design (CAD) and computer-aided design (CAD) and computer-aided dengineering (CAE). Firms that succeed by duplicating products at low cost will respond to product innovators much more rapidly and accelerate the substitution process.

Information technology affects the rate of new entry into industries by negating existing entry barriers or creating new ones. For example, in the banking industry, information technology-based access to banking rvices has seriously eroded the tra ditional entry barriers enjoyed by many branch offices. In the distribution industry, information technology has created new entry barriers by requiring investment in extensive mputer and telecommunications networks that are used to control costs in large-scale multilocation distribution facilities. In effect, information technology has created a new scale-economy barrier that the new entrant must overcome in order to price competitively and still be profitable

Finally, information technology

Each firm in every industry faces five generic forces: buyers, suppliers, substitutes, new entrants and rivals. The specific manifestations of these forces determine a firm's profitability and range of potentially successful strategies.

OH WHAT A YOU WEAVE.

changes industry structure by affecting the rivalry bases among intra-industry competitors. By introducing a new competitive weapon into various settings, information technology sparks outbreaks of firm warfare. Recently, American Airlines and United Airlines have used their reservation systems to competitive advantage by listing their own flights ahead of competitors' flights (termed "systems blas") and by negatively promoting competitors' flights.

Certain securities brokerage firms

Certain securities brokerage firms have exploited information technology to introduce a radical form of cost competition through the telecommunications and computer-based discount brokerage. In the banking industry, leading banks see smaller competitors joining forces through shared ATM networks. Clearly, in-

By introducing a new competitive weapon into various settings, information technology sparks outbreaks of firm warfare. Recently, American Airlines and United Airlines have used their reservation systems to competitive advantage by listing their own flights ahead of competitors' flights (termed "systems bias") and by negatively promoting competitors' flights.

formation technology will contribute significantly to rivalry in many industries in a number of as yet un-

known ways.

Because the competitive forces of buyers, suppliers, substitution, new entrants and rivalry can significantly affect a firm, managing information technology is a vital element of a firm's strategy and part of its competitive domain. Although information technology represents a challenge or threat to a firm's established ways of doing business, it also represents opportunities for gaining new competitive advantages. Information technology resources can be used as competitive weapons to improve a firm's position in its competitive environment.

Creating competitive advantages

Buying power. The buyer groups of an industry represent a force which, if strong, can reduce the profitability of an industry. For example, strong buyer power exists if custom er groups are very concentrated or if they purchase large volumes relative e industry's total sales. When a handful of buyers represents an in-dustry's entire market, then the importance of each buyer to each selling competitor is so great that concessions are a way of life for the industry and potential profits are reduced. Buyers also have significant power if the cost of changing suppliers or changing to a substitute product is low. The lack of "switching costs" between an industry and its buyers can result in reduced profitability.

There are two ways in which information technology can be a strategic weapon for reducing buyer power. First, it can introduce switching costs, making it more costly for a buyer to change suppliers. Information technology has greatly increased the ability of many firms to raise switching costs for buyers. For example, a large medical supply company has provided on-line order entry terminals and inventory manage ment software for customers. As the customers' systems are integrated with the supplier's, it becomes much more difficult for customers to order from a competitor. If customers change suppliers, they incur testing and implementation costs as well as the cost of retraining personnel and developing new procedures. The more sophisticated the systems, the greater the switching costs and the ss power buyers have to indiscri-

minately switch to a competitor. Second, information technology represents a strategic weapon for dealing with powerful buyers by providing the capability for firms to develop buyer information system that determine the profit potential of various buyer groups. All industries have certain customers who are extremely expensive to service relative to the average customer. In addition, some firms are particularly well suited to service some customer groups but not others. However, it is usually very difficult for a manager to determine the overall attractiveness of a current or potential market segment to the business

For example, because of the insurance industry's historical tradition of providing full service to all business customers, there has been no attempt to match products to customer segments in order to maximize profit. Consequently, although they have a wealth of data, most insurance companies have poor information to answer such crucial questions as: How much does it cost to service a particular market segment? How should our customer portfolio be pared to fit our particular capabilities?

To address these critical issues, a large insurance firm is building an extensive claims data base to go beyond actuarial calculations in an attempt to determine which potential markets will be most profitable. As the overall cost of servicing

TANGLED WEB

When first you practiced to send and receive, it was simple. One data source. One data destination.

But as your networks grew, they grew more complex. More fragmented. More dispersed: More out of control.

Something had to be done, and Codex did it. With 6000 Series Intelligent Network Processors.

These statistical multiplexers help you unify a fragmented data network, consolidate data paths, gain more management control and cut line and equipment costs.

At the same time they give you errorfree transmission, greater throughput, increased uptime, maximum flexibility and one point of control easily monitored and managed.

With the Codex 6000 Series, this level of control is possible in any network. With any kind of computer. With any mix of synchronous and asynchronous terminals. Here or overseas. And in more than 40 different protocols from IBM, Honeywell, Burroughs, DEC and more. Including support for X.25.

Codex can even unsnarl the process of choosing equipment and designing a network through the Codex Application Engineering program—the most comprehensive support service in the industry.

It all boils down to this: No matter how big and unmanageable your network has grown, there's a simple way to untangle it.

Codex.

insurance customers increases significantly because of deregulation and competition, buyer selection is a key issue, and the strategic application of information technology resources will provide a competitive advan-

Supplier power. Strong supplier groups may reduce much of an industry's potential profits. The suppliers of an industry include the sources for raw materials, machinery, capital and labor. Suppliers will be powerful if they are very concentrated or if the buyer faces very high costs to obtain information, to shop or to

The lack of comprehensive information systems to monitor and evaluate a bank's current and future money position represents a severe strategic disadvantage in dealing with the major supplier the financial markets. Information technology is a critical tool to help the banking industry respond effectively to fluctuations in these markets.

Information technology represents a strategic opportunity for a firm when the technology can be used to mitigate the factors driving the power of suppliers, thus improving the firm's competitive position. For example, information technology can be used as a viable alternative to high-priced labor. Recent developments in robotics and computer-aided manufacturing not only reduce the cost of labor outright, but they also reduce labor's power to demand industry profits. A manufacturing company recently installed a real time labor efficiency management system that is tied directly to the wage incentive system specified in the union contract. The owner of the business feels that this system has provided a significant advantage in dealing with his labor force.

Information technology can also be used to avoid high switching costs. One of the major problems fac-ing the banking industry is its inability to manage strategically its largest single cost — the cost of money. The sources of funds for a bank include customer deposits, money markets and certificates of deposit. The interaction of various interest rates for these sources creates a complex problem for bank management, espe-cially during times of extreme interest rate volatility. The lack of comprehensive information systems to monitor and evaluate a bank's current and future money position represents a severe strategic disadvan-tage in dealing with the major supplier — the financial markets

Information technology is a criti-cal tool to help the banking industry respond more effectively to fluctuations in these markets. Currently. the lack of strategic information technology severely limits the ability of many banks to gather, process and decide on optimal funds sourcing quickly.

Because of historical and economic conditions, many industries are

subject to intense supplier power. Although some of this power is uncontrollable, the strategic application of information technology often represents a potential competitive advantage.

Substitution. The existence of cost-effective substitutes for a product (for example, margarine for butter) may limit potential profitability in an industry. In some instances, a substitute product can virtually eliminate an industry, as happened when the silicon chipbased calculator replaced the electro-mechanical adding machine. An industry must recognize that both existing and potential substitutes will affect the overall demand for products and the profitability that will result from serving the remaining demand.

This reduced profitability results from price competition with substitutes, the cost of advertising against substitutes and product innovation directed at substitutes. However, substitution also represents an op-portunity for a firm within an indus try to increase its own market by offering its products as substitutes to another industry's buyers. Information technology beco

potential strategic factor in dealing with the competitive force of substitution when information technology affects the buyer's decision to substi-tute or not. This decision is affected by altering the relative price performance comparison with the substi-tute by lowering cost or improving the perceived performance and by increasing or decreasing the range of functions performed by a product.

One example of substitution based on information technology involves a large brokerage firm that developed a new financial product to support a range of product features through a sophisticated information system. Although the product features exist-ed separately in other products, the combination of features and easy customer use made this product an effective substitute for many existing products in spite of the price premium. This product has been extremely successful and now has a

host of imitators.

New entrants. For existing competitors, new entrants present a concern because they will extract some of the industry's profits. For example, increased competition can be touched off by new entrants who use price-cutting tactics to gain market

penetration, which occurred when the Japanese entered the U.S. automobile industry market. Unless industry demand grows fast enough to accommodate the number of new entrants, average profitability will decline.

Entry barriers are the major structural components of an industry that slow or exclude new entrants. Although entry barriers take many forms, sizes and shapes, they all create a more favorable situation for an existing industry participant than for a potential entrant.

This better situation may be based on costs, reputation, service, technology or some other characteristic important to success in the industry. Entry deterrents are tactics or processes that an industry or a firm can employ to make a potential entrant

Information technology can be used as a strategic element to deal with new entrants, both offensively and defensively. An insurance company has continually led the industry by building and maintaining a large on-line telecommunications network to its agents. As increasingly sophisticated insurance products are rapidly introduced, this network will continue to grow as an entry barrier.

reconsider his entry. Such actions as deep price cutting during a new entrant's test marketing can act as a deterrent by emphasizing the industry incumbent's relative cost advantage over the potential entrant, and it can also confuse the test market

results.

Entry barriers and deterrents are key aspects of an industry's continued success. Without continual maintenance of the barriers, new entrants will sneak into the industry, usually at the most profitable segments of the market. A firm's strategy must also take into account entry barriers, because a new entrant will often target a vulnerable competitor. Industry leaders are particularly responsible for maintaining entry barriers and creating deterrents.

A firm that contemplates entering a new industry must consider the entry barriers to be overcome and any potential retailatory action by the violated industry. There are a number of ways to penetrate a new industry, including undertaking joint ventures and acquisitions, focusing on a nonthreatening industry niche or developing new technology that circumvents historical barriers.

Information technology can be used as a strategic element to deal with new entrants, both offensively and defensively. For example, a major insurance company has continually led the industry by building and maintaining a large on-line telecommunications network to its agents. As new, increasingly sophisticated insurance products are rapidly introduced, this network will continue to grow as an entry barrier. Agents must now have much more on-line support, training and promotional backup, and this network provides that support. Without such support, a new entrant will not be an effective competitor.

Another example involves a large financial service company that has built a reputation of quality service and that offers the greatest geographical coverage of any competitior. The company's quality of service and ability to serve a worldwide customer base are built upon information technology capabilities, which represent a capital barrier and which support a reputation barrier.

Information technology will also be used by industrial firms trying to achieve new manufacturing economies of scale relative to competitors, new entrants and substitutes. The potential of these firms to gain scale economies using information technology will depend upon the possibility of going beyond stand-alone applications (which have been the predominant industrial use of information technology).

technology). To develop new scale economies, information technology must be viewed as an organizing concept to use when redesigning the manufacturing process. New economies of scale will only be achieved by identifying the strategic impact of information technology and deploying information technology resources to achieve the desired competitive ef-

Rivalry. Industry rivalry can vary from very intense "guerilla warfare" to a very relaxed "country club" approach. Very intense rivalry depletes the industry of some potential profits, because actions detrimental to the entire industry may occur as competitors struggle to the death for an advantage. The airline industry provides a good example. Because of intense rivalry, airline companies are price cutting far below their real costs. Although one competitor may eventually win, the entire industry is leaved.

losing.

Dealing with competitors strategically does not always mean destroying them. To operate effectively over time, most industries require a group of good competitors. Having proper competitors allows a firm to earn more profits, develop more new

markets and create better entry barriers than it could alone. For a firm to cope strategically with the competitive force of rivalry, management must identify when to compete, when to cooperate and how to do so effectively.

Information technology presents major opportunities for companies to affect the degree of rivalry and the methods used to deal with it. Firms can improve both their own competitive position and the entire industry by utilizing information technologysupported data, information technology distribution channels and potential information links within the industry. In the banking industry, information technology represents a tremendous strategic opportunity for individual firms to deal with increasingly intense rivalry.

For example, smaller rival banks may share a common group of ATMs against a market share leader. In the airline industry, shared reservation systems are a way to improve overall service to the consumer. In the railroad industry, standardized data and communications networks between firms offer a way to improve railroad transportation service. Other examples of cooperative information technology use by rivals include computer-to-computer connections, joint information technology ven-

tures and shared software.
Since information technology presents a virtually unlimited opportunity to structure the relationship between a firm and its competitors, information technology should be a vital component of any strategy for dealing with rivals. The key, of

course, is to know which information technology relationships should be cooperative and which should be competitive.

The five forces of buyer power. supplier power, substitution, new entrants and rivalry shape the compet-itive environment for each firm in an industry. These forces vary in the manner and degree to which they will affect each firm in the industry. As part of its strategic analysis, each firm must identify the specific competitive forces and underlying economics that determine the strength and stability of those forces.

The importance of information technology as a competitive resource can then be estimated by isolating where information technology can be used to alter a competitive balance or parry a competitive thrust. Although this may sometimes happen by accident, the analysis presented here provides a method of identify ing the most likely opportunities, and it should, therefore, improve a firm's luck.

Impact on strategy

The industry setting not only determines the average profitability for a firm, but it also forms the competitive environment within which a firm's strategy must operate. Successful firms in an industry position themselves relative to industry forces by effectively implementing one or more generic strate-

Overall cost leadership on an industrywide basis.

Differentiation of products and services on an industrywide basis.

Concentration on a particular

market or product niche

Each of these strategies provides a general framework within which a firm sets functional policies and procedures and also per forms activities that implement that strategy. If a firm executes one of these strategies successful-ly, it will enjoy an advantage rela-tive to industry forces that will yield higher than average returns.

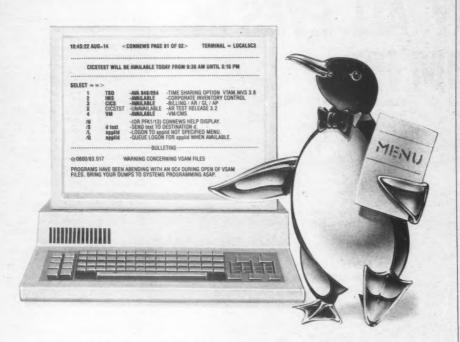

Information technology can affect the ability of firms to execute a particular generic strategy. For example, a large financial service company holds its cost leadership position in the industry because of a sophisticated application of information technology that substantially reduces the cost of transmitting and processing transactions. A manufacturing firm has distin-guished its products by achieving levels of quality control and precision that competitors cannot match. The key to its advantage is a quality control information sys-tem and the heavy use of comput-erized machine tools, which provide much greater accuracy while tripling productivity.

Information technology can contribute to a generic strategy in a variety of ways, because the suc-cessful execution of such a strate-gy requires the broad support of all functional areas in a firm.

Information technology is utilized for experimentation support in research laboratories, for com-puter-aided design and engineering in engineering departments and for production control in factories. The technology is also used for market analysis and distribution support in marketing departments, as a sales tool in the field, for office recordkeeping and for plan-ning in executive offices. In the long term, nearly all functions of all firms can be computer-en-hanced to some degree. The strategic issue is: Given scarce resources of time, money and staff, which applications are most important to

Supporting strategies

Clearly, a firm should use information technology to support, reinforce or enlarge its business strate gy. In general, firms pursuing an overall cost leadership strategy should use information technology to reduce costs either by improving the productivity of labor or by improving the utilization of other resources, such as machinery and inventory Firms following a differentiation

CONNEWS.™ THE APPLICATION MENU THAT GIVES YOU THE HOT NEWS AND THE COLD FACTS.

CONNEWS is the user-friendly ACF/ VTAM software product that lets 3270 users select from a convenient application menu or view up-to-the-minute information from an electronic bulletin board. No systems modifications are required.

CONNEWS. It's the MENU that really satisfies your taste for applications, and installation NEWS. Some of the more desirable entrees include:

- Customized Company LOGO displays
 Individual MENUs for specific
- terminal groups

- Terminal ID permanently displayed
 Operator MODIFYable "HOT NEWS" area
- Availability status for menu entries
- 999 page electronic Bulletin Board
- Single or Multi Domain operation

If you want your menu to be easy-to-read, friendly, and highly flexible, CONNEWS is the one for you. Call us today to make a reservation for a FREE TRIAL

Every software ad you read seems to be talking about 'integrated software'. But it was 1-2-3™ from Lotus® that actually gave the phrase real meaning, because we combined spreadsheet, information management and graphic functions in one simple, powerful program.

A program that is faster and easier to use than any

other software available today.

In short, the tasks it can perform are really impressive, but why it can perform them is even more important. Because we feel the real criterion for any manage-

ment tool is its ability to let the human mind flourish

and accomplish more than it ever has before.

That's why with 1-2-3 the thought process is not interrupted, so your mind no longer has to wait for your hands. To the novice, it makes everything plausible. To the expert, it makes anything possible.

The results: Business decisions come faster and easier. 1-2-3 from Lotus is truly compatible with the most important personal computer of all—the human mind. And isn't that what integration really should mean?

Call 1-800-343-5414 (In Massachusetts call 617-492-7870) and find out more about 1-2-3 from Lotus.

The hardest working software in the world.

THE FIRST MOBILE COMPUTER.

THE COMPLETE COMPUTER FOR THE MOBILE PROFESSIONAL.

Professionals on the move in today's productivitypaced business environment have to run a little faster just to keep up.

They can easily spend half their time in airports, taxis, lobbies and hotels unable to do the work they'd like to get done.

But we have a solution.
Give them the powerful
9 pound, 16-bit computer
that works when and where
they do.

Give them an advanced battery-powered printer that attaches securely on the computer:

Give them an interactive human interface and operating environment that takes only 15-30 minutes to learn.

And unique field-oriented software that comes in rugged plug-in capsules.

In short, give them the Gavilan™ mobile computer.

PORTABLE TURNED PRACTICAL.

Never has there been a complete business computer system as sophisticated, yet as lightweight, as the Gavilan.

Self-contained, rechargeable 8-hour batteries free the user from external power constraints.

The 8 line X 80 character screen eliminates the need for an external monitor, although you can add one if you wish.

The full-size typewriter keyboard makes data entry as convenient as it is in desktop systems.

A built-in 3½" microfloppy disk drive and modem provide the capabilities of data handling and transmission where they never before existed.

And a 50 character per second printer gives the mobile professional in the field the immediacy of hard copy text, forms, charts, spreadsheets and graphics.

All in a compact 14 pound mobile office.

WE BUILT A MORE MOBILE MOUSE.

The success of any computer depends in part on the "friendliness" and accessibility of the user interface.

Especially in the field.
A standard mouse interface is fine for the expanse of a desktop, but not for work on the move.

So with the Gavilan, we incorporated a built-in touch panel: the first fully integrated computer mouse.

It's a pressure-sensitive pad just above the keyboard. Finger movements across the touch panel control the on-screen movements of a cursor.

But like a mouse, the Gavilan touch panel actually executes virtually all of the user commands, saving the keyboard for typing only.

Through the touch panel,

users store and retrieve data. Cut and paste. Move documents. Scroll through pages of information. Zoom out for a complete look at the format of a document. Or even ask the computer what just happened and what to do next. With one finger.

SOFTWARE IN A CAPSULE.

The intuitive ease of talking to the computer through the touch panel is made possible by the unique Gavilan operating environment and software packages.

The applications packages come in durable capsules called Capsule-Ware. They plug directly into the body of the computer, adding no additional volume. The operating software, (GO System.) then lets each of the applications communicate with each other through a common interface and a sharing of data.

The result is a completely integrated information environment that lets the user combine spreadsheets, graphics and word processing text together.

All in the same uninterrupted user mode.

OUTWARD MOBILITY FOR USERS, UPWARD MOBILITY FOR OEMs.

The Gavilan mobile computer and its Capsule-Ware programs are creating vertical market demands—both in MS/DOS and the Gavilan operating environment—for software packages completely unrealized one short year ago.

That means new opportunities in applications development far beyond the typical office-bound programs. From air and sea navigation to banking services. Journalism to field auditing. Anthropology to insurance.

And that means you've got the chance to be first in your chosen field.

A position we strongly advocate.

Gavilan Computer Corp. P.O. Box 5004 Campbell, CA USA 95008 (408) 379-8000 Telex 4991278 GVLN US

strategy should use information technology either directly to add unique features to the product or service or to contribute to quality, service or image through the functional areas

Although a firm may benefit from an information technology applica-tion that is not consistent with its competitive strategy, it will enjoy much greater strategic benefits from an information technology application that is consistent with and supportive of its competitive strategy. Understanding a firm's strategy is critical to the selection of appropriate automation projects, because applications that contribute to a cost leadership strategy are very differ-ent from applications that contribute to a differentiation strategy.

When a firm pursues a cost leadership strategy, information technology must create or support opportunities in these same areas Information technology applications can substantially reduce costs in the functional areas of engineering, design and manufacturing. Information technology can also be used to reduce waste significantly, to improve productivity and to identify margin-al customers. The firm that vigorous-ly pursues a cost leadership strategy should identify and execute inform tion technology projects that support and advance such a strategy.

Conversely, a strategy to achieve a differentiated position in an indus-try has a very different set of requirements. The differentiation strategy requires a perceived uniqueness in design, brand image, technol-

ogy, product features, customer service, dealer networks or some other category. Usually, firms pursuing a differentiation strategy are most successful when they establish uniqueness in several categories. A distribution company specializing in periodicals differentiated itself in service reliability, responsiveness to customer needs and additional product features primarily through its computer systems. Among nationwide periodical distributors, this firm is perceived as the most sophisticated and highest quality firm in the industry.
Information technology can sup-

port a differentiation strategy in a variety of ways. It can contribute to superior customer service by providing historical customer profiles and by increasing the availability of spare parts with a dealer inventory system. Information technology can contribute to high quality through the use of quality control systems and through the use of computer-aided manufacturing systems, which provide flexibility and improved responsiveness to customer needs. In-formation technology can create better product designs, satisfying both manufacturing and marketplace re quirements. In some instances, information technology can also provide access to markets that would otherwise be too remote to service.

Figure 2 shows how information technology applications must be specifically chosen to support the generic strategy of a firm. Applications supporting a low-cost generic strategy are designed to take advantage of

	Low cost	Product differentiation
Product dealign & development	Product argineering systems Project control systems	RAD data bases Professional workstations Electronic mail Computer-aided design Custom engineering systems Integrated systems for manufacturing
Operations	Process engineering systems Process control systems Labor control systems Inventory management systems Procurement systems Quality-monitoring systems	CAM Quality assurance systems Systems for suppliers Quality-monitoring systems

Although it is clear that information technology applications should be consistent with a firm's strategy, little attempt is made in many firms to understand how the technology will affect the firm's strategic position in the industry or how it might support a business strategy.

existing and emerging information technology to achieve a low-cost position in an industry. Applications supporting a low-cost strategy are substantially different from applications supporting a differentiation strategy.

The strategic success of information technology projects within a firm depends upon how well they support the firm's competitive strategy. In one instance, a firm following low-cost strategy gained little strategic benefit from a computer system that offered many options and much flexibility but that was very expensive to operate.

sive to operate.

Over time, the overall cost leadership strategy of the firm continued to narrow the product line and to streamline operations, requiring the functional areas to standardize and

limit options. The large, expensive, multioption system, which was still being developed, ran counter to the firm's strategy. As a result, the system was only partially used, and parts of it were never implemented. Now the users in operations correctly feel that using the system makes it difficult for them to meet their functional objectives as dictated by the cost leadership strategy. They want to scrap the system and buy their own package, which will run on a minicomputer.

In other firms, information technology developments were linked to a specific strategy, and users were very enthusiastic about implementing the systems. They felt the systems were valuable because they helped them carry out assignments within the overall strategy. System

designers must realize that the strategic benefit will only be realized if there is a commitment to and acceptance of the system by multiple functions and levels in the organization.

Effective strategy requires coordination of many interfacing functions. Management must consider such factors as supporting subsystems, personnel and compensation to ensure an information technology system will contribute significantly to a strategy. For example, highly sophisticated, information technology-enhanced tools for selling insurance will not be effective if salespeople are not hired, trained and motivated to use the systems.

Although it is clear that information technology applications should be consistent with a firm's strategy, little attempt is made in many firms to understand how the technology will affect the firm's strategic position in the industry or how it might support a business strategy. For example, a number of major U.S. banks have recently removed their top information systems executives. Although a variety of explanations were given for these management changes, the underlying reason was that information technology was not being managed in a way consistent with the banks' strategic needs.

The problem, of course, was not that these executives could not develop technology consistent with the bank's strategy. The problem was and continues to be that neither the bank executives nor the information systems executives understand how information technology affects their business. Neither group can articulate how computer hardware and software should support or extend the bank's ability to make money.

For years, technical experts have expressed concern over whether a firm's computer systems met their needs. Unfortunately, these experts did not understand the needs of a business from a competitive viewpoint, as they did not perceive information technology to be in the competitive domain of a business. In spite of this general lack of strategic direction, firms in many industries are using information technology to

their competitive advantage.

As technology continues to develop rapidly and becomes a major factor in more industries, firms must begin to manage strategically information technology. The framework presented here describes the first steps management should take to link information technology to a firm's competitive strategy by analyzing its impact at the industry,

firm and strategy levels.

By understanding when, where and how information technology will affect a firm, management can develop an explicit strategy that makes the necessary trade-offs and directs resources to take advantage of opportunities while mitigating threats. Without such an understanding, firms will continue to ride a speeding technological roller coaster, spending more money and acquiring new hardware without sound business justification.

Seven systems were evaluated in the benchmark tests. The results show how Mumps stacked up.

A case for Mumps

By Casimiro Alonso

The system buyer's dilemma is familiar: "Overpurchasing" immediately results in wasted resources, and the waste may continue for years. Yet purchasing only enough computing power for current needs usually means that sooner or later the operations manager must choose among four distasteful alternatives: accept slow response times, limit the number of terminals and applications, redesign and reprogram applications or upgrade the CPU and install larger disks.

This situation is especially troublesome for systems vendors, like our company, who are often required to bid competitively on meeting a potential customer's needs. Overspecifying could mean losing the job to a competitor. Underspecifying means the system will fail to meet long-term customer needs.

We are always careful to examine solutions such as modular hardware that is easily upgradeable, software that is upward-compatible and distributed processing systems linked with local-area networks. Yet, more and more, we find that the simplest solution is the best: to provide the very highest system price/per-

formance right from the outset.

Recently, hardware vendors have made great strides in improving the price/performance of microcomputers, as evidenced by Motorola, Inc. 68000-based systems. However, hardware vendors primarily stress machine performance and are not as aggressive in matching hardware improvements to software progress as some would like them to be. In fact, programming languages and operating systems have followed from mainframes to minis to superminis to micros without changing sufficiently to accommodate many of today's interactive needs. Now, this outdated software is often a bottleneck to a true increase in total system performance.

Put to the test

Just how much difference good system software can make in performance recently came out in a series of benchmark tests we were involved in as part of a bid to provide an administrative computer system to a department store.

Getting this contract required demonstrating superior performance, with the lowest overall cost, over several competitors in actual customer applications. Each

In benchmark tests to determine the systems vendor for a retailing application, Mumps — perhaps surprisingly — proved the superior choice for programming language performance.

Now there's a way to let everyone in your company chip in.

AT&T Information Systems, the company whose unparalleled communications heritage has been bringing people together for 100 years, now brings your office together. With

state-of-the-art office automation that's de-

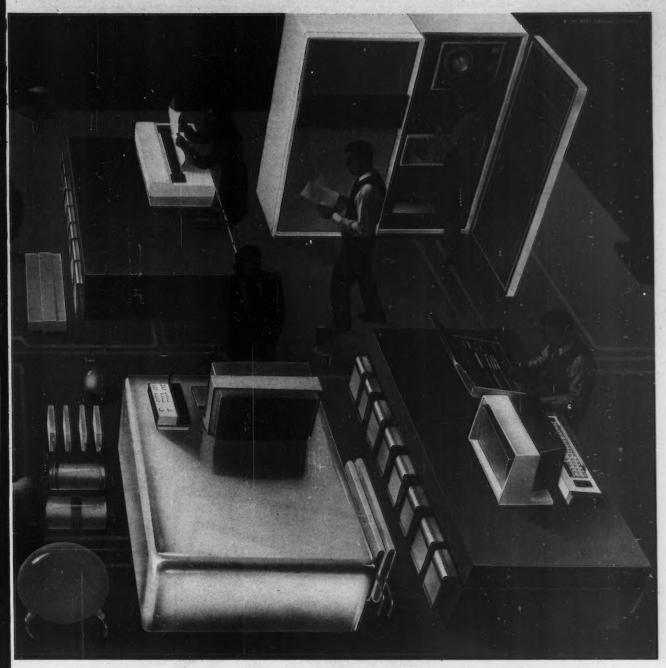

signed to get your company moving ahead. Electronic Document Communications now available on System 85 and DIMENSION PBX, is an easy-to-learn software application that's hard to beat. Because it integrates your office by letting everyone prepare, send and store documents and messages with the speed and efficiency of a computer. So you can have better access to the right information in the right form at the right time.

Electronic Document Communications can streamline your office in three ways:

Preparing Information - Reduces the time, effort, cost and wasted paper between drafts by electronically creating, editing and formatting documents and messages. "The Composer," a special software feature, checks spelling, grammar, punctuation and usage. EDC even measures whether documents are readable by technical and nontechnical readers.

Moving Information — Speeds documents to many people in different locations simultaneously so they can act decisively. EDC allows you to determine the timing and cost of delivery, and even check to find out when documents were received. Using a password ensures the privacy of

Managing and Storing Information -Locates documents, and retrieves and evalu-

ates contents quickly and easily with electronic files—while reducing the possibility of losing documents. An electronic "Mailbox" allows you to quickly determine which documents to read first. EDC reduces storing and filing costs with an electronic "Archives" that allows for either short- or long-term storage, and the "Wastebasket" which enables you to permanently delete items after a determined period of time. There's even an electronic "Calendar" that checks personal schedules and arranges mutually convenient meetings.

Not only will all these features help you further integrate your office, Electronic Document Communications is itself just one

part of AT&T's line of completely integrated business systems. For state-of-the-art office automation, you can implement EDC in conjunction with other applications software like Message Center/Directory, a call coverage and message system. These office management applications are now available on System 85 and DIMENSION* 600 and 2000 systems with the Applications Processor.

The result is you'll be able to improve

The result is you'll be able to improve staff productivity at every level and get every-body on board. And as new features are developed in the future, they'll be compatible with your existing equipment.

EDC was developed by Bell Labs systems designers who now work for AT&T Information

Systems Laboratories. AT&T Western Electric produces EDC, and AT&T Information Systems will maintain it with comprehensive, conscientious service from the largest service organization in the industry. To find out more, call toll-free 1-800-247-1212, Ext. 879M.

AT&T's Electronic Document Communication.

AT&T's Electronic Document Communications: It's part of the integrated office of tomorrow that you can board today.

IN DEPTH/A CASE FOR MUMPS

competitive bid was based on providing both economical application development and an efficient run-time environment. In addition, we wanted to assure that the system we proposed was expandable and economical over the long term, as well.

From previous experience with the Mumps language, we were aware of its ability to improve programmer productivity and, thus, to re duce software costs by

speeding up development time. We also liked the fact that Mumps provided easy portability from micros to minis to superminis. We were, therefore, inclined to go with a Mumps-based system. However, what overall effect Mumps would have on system performance and whether it would allow the full functionality required for winning the contract was

The data for the compari-

son was submitted by the different hardware vendors, and each vendor was kept informed of the results of each other vendor so as to encourage each to obtain the best possible performance from his system.

The benchmark took the form of comparing Mumps with other languages and data base systems in terms of disk occupation, process ing speed and lines of code needed. Specifically, it consisted of:

1. Creating a data base with the following structure: Files

Parts file (1,000 records). Color file (6,000 records) containing six "color" re-cords per "part." Size file (48,000 records)

containing eight "size" re-cords per "part-color." Store file (288,000 re-

cords) containing six "store" records per "part-color-

PC WORLD

Supplier file (20 records). Family file (20 records). Relationships: Part-color-size-store (343,000 relations).

Store-part-color-size (343,000 relations). Supplier-part (1,000 relations).

Family-part (1,000 rela-

tions).
2. Creating a data base that gives stock and sales charts as well as stock value per family part-color-size store. The query implied the use of the "family-part" and the "part-color-size-store"

On the data base creation test, Mumps was from half again as fast to 18 times as fast as the other systems. The Mumps data base also occupied only one-half to one-fourth of the disk space required by others. And Mumps programming required one-third fewer lines of code.

relations. Two different queries were performed: a 'long" one requiring access to 17,650 records, and a "short" one, accessing just 50 records.

The chart on the cover page shows the technical specifications of the different systems evaluated in the benchmark.

Results on seven systems

Mumps performed much better than the other languages on almost every comparison run (again, see cover page). On the data base creation test, for example, Mumps was from half again as fast to 18 times as fast as the other systems. The Mumps data base also occupied only one-half to onefourth of the disk space required by others. And Mumps programming re quired one-third fewer lines of code.

In summary, in different comparisons on various machines, Mumps was bested only once.

A more significant fact is that a Digital Equipment Corp. PDP-11/44, running Mumps, actually outper-formed all 16-bit and most 32-bit minis on most of the tests.

This data indicates that a user choosing Mumps software for interactive data base applications can expect up to five times more power from a given computer. And this power, in turn, will eliminate many of the performance problems encountered by minicomputers in administrative environments.

In addition, the data laid to rest the criticism that the

Software companies such as Electronic Arts, MicroPro and Microsoft. Hardware OEMs such as Fujitsu and NCR. And publishing houses such as Milliken and Rand-McNally. These and many other quality-oriented companies MICR@SOFT. WORD are calling on Data Encore for software

We're the experts at duplicating success.

a Verbatim Company

IN DEPTH/A CASE FOR MUMPS

The system we were prepared to recommend to our customer was a DEC VAX-11/750 under VMS, running VAX-11 DSM. This recommendation was made to allow the user to take advantage of Mumps as well as gain the 32-bit capability and future growth and versatility of the VAX.

Mumps "interpreter" approach imposes performance penalties on applications. The results show clearly that Mumps is not at all slower than other software. Indeed, it offers an incredible performance increase over competitive systems.

For these reasons, we decided to recommend that our client go with a Mumps applications program.

Implementations on DEC CPUs

At the time of the benchmark comparisons, the development system in our company was a DEC PDP-11/44 with RK07 disk drive running DEC-standard Mumps, DSM V2.2.

The system we were prepared to recommend to our customer was a DEC VAX-11/750 under VMS, running VAX-11 DSM. This recommendation was made to allow the user to take advantage of Mumps as well as gain the 32-bit capability and future growth and versatility of the VAX. However, it also meant that we would have to use an outside VAX to refine the programs after we developed them on our own in-house 11/44. This procedure presented no problem, because no modification of

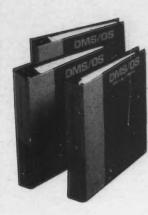

source code would be needed in order to move the Mumps programs between the 16- and 32-bit CPUs.

The performance obtained inhouse with the 11/44 was exceptionally good and placed us far ahead of the others preparing competitive proposals. It also provided a large margin for the additional overhead burden we expected in moving from the PDP-11's dedicated operating system to the general operating system of the VAX. Unfortunately, when moving to the VAX, the overhead turned out to be greater than we anticipated and threatened to wipe out much of our competitive advantage.

advantage.

Before making the final proposal, we decided to test the latest Mumps implementations on the VAX to see how much, if any, performance improvement was possible. We contacted both DEC and Intersystems Corp., two major Mumps suppliers, for help. DEC responded with an improved, experimental VAX-11 DSM (2.1); Intersystems with its current M/VX.

The basic difference between DEC's experimental and current

DASD MANAGEMENT AWARD WINNER

The world's leading DASD management system, installed in more than 750 Fortune 1000 sites. Tailored to IBM VS1 and MVS, operating environments, yet doesn't rely on any IBM utility. DMS/OS — with disaster recovery — gives you more space and more usable DASD reports. Here is a direct-access storage device management system that dramatically reduces DASD conversion time, frees up operator time, and provides enforced control standards.

Is it any wonder that over 75% of world's leading industries turn to Sterling Software Marketing and DMS/OS for DASD management?

WORLD C

Computerworld/Japan can bring your message to the

world's second largest computer market.

The Japanese computer industry is growing at a rate of 20% per year. There are currenty more than 101,000 installed general purpose computers valued at over \$18 billion.

Diana La Muraglia, Manager

Japan is looking for well-developed technology that will meet their future needs. And with no strong independent software industry of its own, Japan offers great opportunity for U.S. manufacturers in the packaged software market.

Computerworld/Japan is a weekly publication covering the latest developments in the Japanese computer industry with reports on new products, services and trends. Its 30,000 subscribers include top management and DP professionals throughout the country.

CW International Marketing Services gives you one-stop advertising service in countries around the world. For more information on Computerworld/Japan or any of our other foreign publications, just fill out the coupon below.

IN DEPTH/A CASE FOR MUMPS

		VAX DSM1.2 780 RM05			
Data base creation	32 min	2 hours, 57 min	13 min	37 min, 20 sec	20 min, 52 sec
Data base query	3 min, 55 sec	8 min, 30 sec	1 min, 37 sec	4 min, 4 sec	2 min, 50 sec
Data base disk occupation (K bytes)	6.073	10.5	5.4		5.4

Figure !

VAX-11 DSM is that the new version uses a global handler that minimizes the use of RMS Isam files to store data base files ("globals" in the Mumps world). The currently marketed version relies heavily on the use of RMS Isam files.

M/VX does its own data base handling within one RMS file. It is more specialized software, designed to minimize dependency on both operating and record management systems. Since it minimizes dependency on operating system facilities, it

	M/VX	Cobel	Ratio
sta base creation	13 min	2 hours	923%
ata base query	1 min, 37 sec	2 min, 35 sec	159%
eta base disk occupation (K bytes)	5.4	21.7	401%
nes of code needed	183	1,050	573%

Figure 2

avoids much of the overhead associated with general operating systems.

The comparative test of these implementations produced a pleasant surprise (see Figure 1). The results show that DEC's experimental VAX-11 DSM X2.1 can provide performance on a VAX 750 comparable to

that of an 11/44 running DSM-11. Further, they show that with M/VX, a VAX 750 can clearly outperform an 11/44, and a VAX 780 can become an "unbeatable" machine.

In short, these tests show that it is possible to combine the advantages of the VAX with the advantages of Mumps, without the performance losses resulting from the overhead of a general operating system.

Mumps, Cobol on VAX

Although the benchmark was set up to compare several systems, we also thought it would be informative to demonstrate to the customer the results obtained when running the data on the same VAX 750 using first Cobol, then Mumps. The results were as shown in Figure 2.

Because of this series of benchmark tests, our company was able to make a strong, well-supported recommendation for a powerful, versatile and fast hybrid system: a DEC VAX for 32-bit capability and future flexibility and Intersystems M/VX for high-performance Mumps applications programs.

On this recommendation, we were selected, and our customer ordered three VAX systems as described above. They are now up and running.

Prior to installation, the customer was also able to save considerable development time by assigning three programmers and a systems analyst, none with prior Mumps experience, to develop and test applications on our in-house PDP-11. This development work was possible because no conversion was needed when the applications moved later to the VAX. The applications development

The applications development took about one-third the amount of time that had been forecast for the use of other languages. Seven complex applications were developed in a space of about four months.

In addition, the customer got a bonus in disk space savings, which provides growth potential and a future possibility of saving money in disk configuration.

HARD TALK

TOM HENKEL

U.S. control over what hardware is shipped to foreign coun-tries is falling apart. With more computer sys tems, peripher-als and compo-

nents being shipped today than ever before, it is becoming clear that the government hasn't the slightest idea where much of it is going.

It is impossible to check every box on every airplane, boat or truck that departs U.S. borders. And it's equally difficult to make sure computer systems that leave the U.S. for sanctioned sites actually reach their destinations.

Let's face it, no one really knows what happens to a box when it is shipped from point A to point B. Items ss through many hands and visit many freight yards before winding up, usually, at the address listed on the shipping label.

Sometimes things go wrong. While logic dictates that big things like computer systems just do not vanish many DPers have spent days waiting for a desperately needed replacement part that was loaded on a truck on Tuesday and has not been seen since. There are hundreds of horror stories about shipped items, even entire freight cars, that have been missing

The U.S. Customs Service recently snatched two Digital Equipment Corp. VAX-11/782 superminicomputers from West German and Swiss docks. They said those systems had been laundered out of the U.S. and were destined for the Soviet Union. They reportedly were to be used for military applications.

But keeping two VAX processors out of the Soviets' hands hardly solves the problem.

High tech has become a worldwide preoccupation. That means the United States no longer holds the plug to every computer system built. The Japevery computer system outlet the anese, for example, make most of the components that go into the VAX, as See CONTROL page 61

DP disasters hurt entire firm

Planning seen key to survival

Disasters in the computer room affect not only the DP operation, but the rest of the company as well. A corporation's cash flow can be interrupted, its position in the marketplace can be hurt, customer and employee relations can be strained and a firm's purchasing power can be

jeopardized.

While there is no way to prevent many sters, the risks and implications of a significant disruption of DP services cannot be ignored.

Planning is the key to survival in any contingency program. The goal is to get critical applications running as quickly as possible regardless of the reason the system is not working. For example, there can be hardware damage resulting

from a fire, explosion or power failure. But also remember that a system can be rendered helpless by other factors. For example, a data communications failure could make vital data inaccessible. But contingency planning involves more than just finding innovative ways of getting the hardware back on-line. There are many issues to consider. For example, how much money will a firm lose if a critical application is lost? What happens if that application is down for an extended period of time?

Function at many levels

A contingency plan can function at many levels. It is up to the DP executive to determine which steps a firm should take to protect its data. This decision should include an economic justification of various contingency planning alternatives and integrate top management and user views

A good contingency plan must also hold provisions to test and refine the

There should be a framework for maintaining the plan. This involves training personnel in how to recover successful See PLANNING page 61

Selanar announces upgrades

SACRAMENTO, Calif. Selanar Corp. has announced a series of graphics upgrades for terminals and printers produced by Digital Equipment Corp., Qume Corp., Televideo Systems, Inc. and Lear Siegler, Inc.

The SG480, SG481 and SG482 reportedly are user-installable, high-resolution graphics upgrades for the DEC VT100, VT101 and VT102, respectively, featuring 800- by 480-pixel resolution and Tektronix, Inc. 4010 and 4014 emulation with enhanced graphics module. They feature variable character sizes, variable line types, point plot, incremental plot, write-through mode and crosshair cursor.

The upgrades are priced at \$1,195, the

Also announced by Selanar were the SG101-D and SG102-D low-resolution upgrades for the DEC VT101 and VT102, r spectively. They reportedly feature 700-by 250- by 2-pixel resolution, Tektronix 4010 and 4014 emulation and user instal-lation in less than 15 minutes. They are priced at \$795.

For the Lear Siegler 3A, 3A Plus and 5,

Selanar is offering the SG305 low-resolution retrofit board. It reportedly features 640- by 240- by 2-pixel resolution, Tektronix 4010 and 4014 emulation and 30minute field installation. It is priced at

Selanar also announced the SG970 and SG102Q, which are retrofit graphics boards for the Televideo 970 and Qume boards for the Televideo 970 and quine QVT102 terminals. Priced at \$795, they reportedly feature Tektronix 4010 and 4014 emulation with enhanced graphics modules and are user installable in less

than 20 minutes.
The Selanar SG120V provides standalone Tektronix 4014 graphics and is compatible with the DEC LA34, LA50, LA100 and LA120 printers.

According to the vendor, the SG120V offers a resolution of 132 dot/in. horizontally by 72 dot/in. vertically, a 7,000-vector buffer, a 100K-byte spooling buffer, switch-selectable bit/sec rates between host and printer, eight selectable picture sizes and rotation of picture. It is priced at \$1.095.

Selanar, 4212 N. Freeway Blvd., Sacramento, Calif.

Fluent Communications From a Polished Performer

Series II **Plu**s

We've added a little polish to our Series II family of protocol converters. The result is the Series II Plus, a complete line of SNA/SDLC and Bisync protocol converters. If you've become accustomed to the performance of KMW 3270, 3770, HASP and 2780/3780 protocol converters, you're going to appreciate the Plus.

Pluses

+ Diagnostics

The KMW Series II Plus provides three levels of extensive on-board diagnostics for troubleshooting without ever opening the unit. Level one testing includes PROM and RAM tests as well as confidence tests of most system compo-nents. Level two testing is a much more comprehensive test of system components including I/O circuits. Level three is controlled via the system console and includes the ability to move data files to each of the supported peripheral

+ Programmability

Host session and asynchronous device parameters are programmable via the setup mode on the system console. Programmable host ses-sion parameters include:

- · log on information · device address
 - · data rate

Programmable asynchronous device parameters include:

- · device type
- · character framing
- · input mode

· buffer size

- · data flow control
- · output mode
- · data rate

Setup data can be permanently held in EEPROM even when the Series II Plus is powered off.

+ Speed

Featuring a Z80A processor, the Series II Plus is capable of data rates up to 19.2 Kbps or, with optional Z80B processor and DMA, up to 56 Kbps as well as concurrent operation of up to 8 input/output devices at equivalent rates!

+ Code Compliance

The Series II Plus converters meet the FCC emissions requirements and are designed to satisfy those requirements when included in subsystems. The Series II Plus is also UL and CSA listed.

+ Fluency

The Series II Plus provides fluent communications in IBM SNA and Bisync protocols including 3770. 3270, HASP and 2780/3780. All Series II Plus converters support a multitude of input and output devices and are available with up to 8 ports (3 in 2780/3780 converters). You can count on the ries II Plus for fluent IBM to **ASCII** communications

CONTROL

from page 59

well as other large-scale processors.

Many countries are importing Jap-anese components and integrating them into computer systems. Scot-land's so-called Silicon Glen is dotted with microcomputer manufacturing plants that buy up Japanese components and use cheap Scottish labor for assembly.

Israel has a burgeoning software industry. Taiwan is making chips. The list goes on, and it will continue to grow. If the Soviets want a VAXlevel processor, they are going to get it, if not from an American manufac-turer, then from a foreign source.

While the U.S. currently holds the top slot when it comes to technology, there is no guarantee it can keep those technologies under wraps.

Even if the current, outdated, U.S. export laws that forbid U.S. manufacturers from dealing with the Soviets are stiffened, other countries are sure to find the Soviet Union an extremely fertile market in which to ell electronics. After all, without the IBMs and DECs of the U.S. as competitors, selling hardware becomes a much easier task.

PLANNING

from page 59

cessfully from a disaster.

Gaining top-level, corporatewide support for a disaster recovery plan is probably the strongest guarantee for success.

Three basic steps

To do this, there are three basic steps that help define the overall impact of the DP operation on the rest

of the company.

The first step is to evaluate thoroughly the costs and benefits of a contingency plan. This involves in-put from the DP department as well as from the users of the system.

Next, the DP executive must de-

termine which applications are most critical to the firm's operation. This involves a priority analysis of appli-cations, determining the operating requirements for each of the key applications.

This phase also includes an analysis of the risks and benefits of various recovery alternatives.

■ The last step involves the actual development of a contingency plan. This plan should be developed by the DP personnel so that they are familiar with its structure. The final step also involves testing the contingency plan to make sure it works and training personnel in how to cope with a disaster.

At the conclusion of each of these phases, an interim report of observations, findings and recommendations should be released to management for review and comments before proceeding to the next phase.

In this way, management involve-ment is maintained, and there is a higher potential for a workable contingency plan.

The main reason a contingency plan fails is because the firm chose a technical solution before adequately understanding the management requirements of the organization.

Somogyi is an information system services specialist with Ernst-& Whinney, a Cleveland-based disaster recovery consulting firm.

TURNKEY SYSTEMS

AGENCY MANAGEMENT SYSTEMS, INC.

Turnkey man nent and marketing

Agency Management Systems, Inc. (AMS) has announced a turnkey management and marketing system designed for independent insurance agents and brokers. The system is based on IBM's Personal Computer.

The AMS micro includes an IBM Personal Computer with 256K bytes of main memory, a 35M-byte hard disk drive, 60 char./sec letter-quality printer, streaming cassette tape drive for backup and a mouse. Soft-

ware includes accounting, billing, client services, diary, word processing, query and marketing.

The software for the micro provides the marketing and manage tools that the company offers in its IBM Series/1 minicomputer system. The AMS micro costs approximate-

ly \$16,000, the vendor said.

AMS, Suite 300, 150 Interstate N.,
Atlanta, Ga. 30339.

DATA STORAGE

QANTEX DIVISION OF NORTH ATLANTIC INDUSTRIES Jetstream 16

A streaming cartridge tape system

that can read and write as a 9- or 16track tape drive and offers up to 99M bytes of storage is available from the Qantex Division of North Atlantic Industries.

Called the Jetstream 16, the unit is both QIC 02- and QIC 24-compatible and was designed as backup storage for Winchester disks in the 30M-byte range and higher. The unit is said to provide up to 80M bytes of formatted data on a standard data cartridge, in addition to reading and writing the standard 9-track, 45M-byte format. The system handles burst transfer rates of up to 400K bit/sec, the company said. An average transfer rate of 72K byte/sec is required to maintain streaming.

Other features of the microproces-Continued on page 62

sor-based Jetstream 16 include automatic reference burst location, automatic cartridge identification, error

logging and diagnostic tests.
The Jetstream 16, including controller, costs \$1,450 in single quantities, with OEM discounts available, the vendor said.

Qantex Division, 60 Plant Hauppauge, 11788.

TARGA ELECTRONICS SYSTEMS, INC.

DR1101 data recorder Soli-drive FDE425 CH40 holder/ interface

Targa Electronics Systems, Inc. has announced a line of industrial bubble memory data storage systems designed for moderately rugged plant and factory

Available in sealed, movable cartridges of 128K bytes or 256K bytes, the memory systems were designed for industrial and laboratory data acquisition and process control applications, the vendor said.

The DRII0I data recorder is self-contained, benchtop device with various interface and software protocol op-tions. The unit includes an RS-232C or IEEE 488 communications port with software implemented to emulate a Digital Equipment Corp. TU-58 cartridge tape recorder or a Hewlett-Packard Co. HP 82902 floppy disk drive

The Solidrive FDE425 is a floppy disk emulator that is electronically compatible with Ansi standard drives and fits a 514-in. footprint. The unit can be changed from one standard format to another, the vendor said.

The CH40 OEM holder/interface subassembly series was designed for manufacturers of such equipment as portable computers, control systems and geophysical instruments.

It is available with serial or parallel communications and simple software protocols, the vendor said.

Single-unit prices for 128K-byte versions of the Targa systems are \$2,995 for the DR1101 data recorder, \$2,495 for the FDE425 floppy disk emulator and \$1,795 for the CH40 holder/interface, according to the com-

Electronics Targa tems, P.O. Box 8485, 3101B Hawthorne Road, Ottawa, Canada K1G 3H9.

ROTHCHILD CONSUL **Optical Memory Report**

Rothchild Consultants has announced that it will publish an annual report, with periodic updates, on developments in the field of optical

disk drives, optical media and digital read-only disk drives.

The "Optical Memory Report" will provide manufacturers, users and venture capitalists with information about product specifications, vendors, OEM and user prices and market forecasts.

The first edition is sched-North Atlantic Industries, uled to be published in the Plant spring of 1984 at a cost of N.Y. \$1,995. It can be purchased

at a discounted prepublica-tion price of \$1,495 if payment is received before April 1, according to the vendor.

Rothchild Consultants, P.O. Box 14817, San Francisco, Calif. 94114.

FUJITSU AMERICA, INC. M2333; M2330AT; M2333AT

Fujitsu America, Inc. has announced an 8-in. Winches-

ter disk drive and two half-

high, 54-in. rigid disk drives.

The 8-in. drive, the M2333, reportedly offers 337M bytes of unformatted storage in a package that measures 5 in. by 8½ in. by

A pair of the drives repor-tedly can be installed side by side in a standard 19-in. rack to provide 674M bytes of storage. The drive is said to feature an average positioning time of 20 msec, and a data transfer rate of 2.4M bit/sec with a storage module drive plus interface, accord-

ing to the vendor.

Evaluation units reportedly will be available in August with production delivery scheduled for November at a price of \$5,500 in quantities of 100.

The 5¼-in., half-height drive, the M2330AT, reportedly offers 6.6M bytes of

Third in a series of reports on the role of personal computers in the office.

The most important program we've ever written.

Personal computers, in general, don't require nearly as much service and support as mainframes.

Apples, in particular, require even less. Thanks to extensive self-diagnostics, in-the-field quality monitoring, and modular self-service hardware, all our machines are phenomenally reliable.

But in the event your Apples do need our attention, we've got just the program: our National Account Service and Support Program for Apple Personal Computers.

A package of innovative options that lets you pick and choose exactly what level and what kind of service and support you need — designed specifically for your business, corporation or profession.

EVERY APPLE COMES WITH A SET OF WHEELS.

Which means, if you desire, we'll come to you. It's all part of our nationwide Apple On-Site Service Program, provided in conjunction with the RCA Company.

Like all Apple products, Apple On-Site works simply. You call us. One phone number. Toll-free. We do the rest

The rest"entails having an RCA Customer Service Representative from one of the over 200 field offices come out to your office and solve your problem. Usually within the next half

This partnership with RCA makes Apple On-Site one of the most experienced service networks in the business.

And just one easy-to-budget-for annual fee covers everything. There are no zone charges,

no warranty or travel charges, and no minimum quantities. So you can get on-site service whether you have one Apple or one thousand.

LISA GETS LOTS OF ATTENTION

The same toll-free number mentioned above puts users of the Lisa" Personal Office Systems in touch with specially trained Lisa experts who can answer application-related questions during the warranty period.

You can also get special application training on the Lisa. Courses follow a hands-on, self-paced format, and are taught by certified Apple trainers.

Both basic and advanced courses are available, either at your office or at selected Apple sites.

storage, and the M2233AT, 13.3M bytes of storage. Both drives are 1.62 in. high, and have Seagate Technology, Inc. ST506/412 compatibility.

In quantities of 100, the M2230AT drives are priced at \$750 each, and the M2233AT at \$850, according to the vendor. Evaluation units reportedly will be available during the first quarter of 1984.

Fujitsu, 3075 Oakmead Village Drive, Santa Clara, Calif. 95051.

COMPUTER STORAGE TECHNOLOGY, INC. CS-100: TS-100

Computer Storage Technology, Inc., (CST) has announced a streaming tape subsystem for backup storage and an on-line operation-

al magnetic tape subsystem for the IBM Series/1 minicomputer.

The CS-100 streaming tape subsystem provides up to 55M bytes of backup storage for large capacity Winchester disk drives, according to CST.

It reportedly uses the firm's CC-100 peripheral processor and a ¼-in. cartridge tape streamer based on the QIC-02 cartridge used by Ar-

chive Corp. Sidewinder or Cipher Data Products, Inc. Quarterback tape drives.

The tape subsystem can be mounted in a standard 19-in. rack, with no need for a software driver, diagnostic changes or controls, other than a power switch, according to a spokesman for the vendor.

The firm's TS-100 tape subsystem consists of a TC-100 peripheral processor, a universal users' adapter and up to four tape transports, the spokesman said.

It is said to be compatible with tape speeds from 12.5 in./sec to 125 in./sec.

It reportedly features switch-selectable address and density selection with quartz crystal generated timing in order to eliminate the need for controller adjustments.

Both subsystems are available 30 days after receipt of order, according to the spokesman.

The CS-100 costs \$4,970. The price of the TS-100 depends upon the tape drive selected, ranging from \$10,100 using the Kennedy Co. 9000 drive to \$12,300 using the Kennedy 9300, according to the vendor.

Computer Storage Technology, 1369 S. State College Blvd., Anaheim, Calif. 92806.

TERMINALS

BARRISTER INFORMATION SYSTEMS CORP.
Attorney Workstation/Telephone

A combination computer workstation and telephone designed for lawyers and professionals is being offered by Barrister Information Systems Corp. for use with the Barrister Law Office Information System.

Comprised of a Northern Telecom, Inc. Displayphone, the Attorney Workstation/ Telephone functions as a terminal on the Barrister system and as a telephone with special executive features, according to a spokesman for

the vendor.
With the Displayphone, the attorney can inquire into the Barrister litigation support, information management and financial management data bases, as well as public information sources such as Dow Jones News Retrieval Service, The New York Times, Lockheed Dialog and Westlaw, the vendor spokesman said.

The system performs docketing functions and has a reminder service for key meetings that holds up to 58 entries one year in advance, the vendor said.

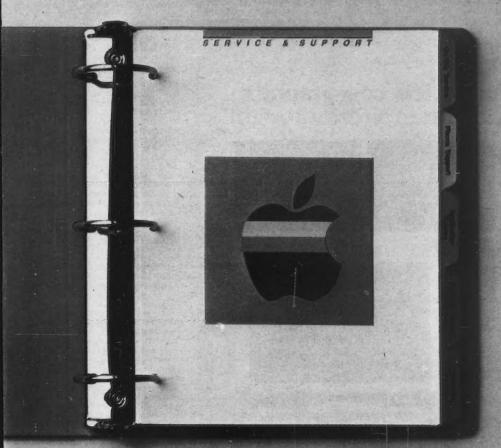

The Attorney Workstation reportedly features a 7-in. video display terminal, a retractable keyboard and a directory that stores as many as 81 numbers for automatic disling.

dialing.

The Displayphone is portable and can communicate to the Barrister system from any location through telephone lines, according to the vendor.

The Attorney Workstation/Telephone is priced at \$1,995.

Barrister Information Systems, 45 Oak St., Buffalo, N.Y. 14203.

And when it comes to servicing Lisas, or any Apple for that matter, you may be interested in our "Servicing Owner" program. Which provides the information, parts and training your people need to be totally self-sufficient.

LOCAL SUPPORT, TOTAL SUPPORT.

The above services are available through any of Apple's National Account Support Dealers.

Of which there are hundreds, nationwide.

Apple provides these dealers with everything they need to provide you with everything you'll

need. Service, training, application assistance and

In sum, no matter what part of the program you choose, you'll be working with the company that's installed, serviced and supported personal computers longer than any other. Apple.

We're not just starting a revolution in your office. We're supporting it.

Soon there'll be just two kinds of people.
Those who use computers and those who use Apples.

Call (800) 538-9696 for the location of the authorized Apple dealer nearest you, or for information regarding our National Account Program. In Canada, call (800) 268-7796 or (800) 268-7637. Or write: Apple Computer Inc.; Advertising and Promotion Dept., 20525 Mariani Ave., Depending CA 95014. © 1983 Apple Computer Inc.

SYSCON CORP. Versaterm

Syscon Corp. has announced a hand-held terminal with 64K bytes of programmable memory for data gathering applications

According to a company spokes-man, the Versaterm terminal weighs 1 lb and measures 31/4-in. by 7-in. by 11/4-in. It reportedly features 32 keys, including a shift key, for a total of 63 functions. A 2-line by 32-char. LCD, low-power microprocessor and rechargeable battery are also included.

The terminal can be programmed for a variety of tasks, such as collecting meter readings, gathering inventory of patient information, record-nounced an addition to its bedside ing data for laboratory experiments,

monitoring industrial processes and monitoring and scheduling mainte nance, the spokesman said. Data re-portedly can be loaded and unloaded from a variety of host computers through an interface and a battery-charging device that can accommodate eight terminals, the vendor said.

The terminal is available for \$3,000, and the interface device is available for \$6,000.

Suscon, 3990 Sherman St., San Diego, Calif. 92210.

HEWLETT-PACKARD CO. HP 78532A

patient monitoring family, the HP

78532A monitor/terminal.

Compatible with all HP medical equipment, the bedside terminal was designed to be an integral part of the HP Care-Net critical care local-area network.

Standard measurements on the terminal/monitor include full-lead electrocardiogram, two pressures electrocardiogram, two pressures and one- and eight-hour trends. The expandable 16-bit microprocessor allows field-upgradable enhancements such as the cardiac output module which provides cardiac output and blood temperature measurements, the vendor said.
The HP 78532A has an overview

feature which allows the user to access the waveforms, vital signs and alarm messages of up to 24 patients. Overview is initiated manually or automatically during an alarm condition from another bed, the vendor

Buttons on the instrument panel provide access to critical or frequent-ly performed tasks. A row of user-changeable function keys labeled on the video screen are for less critical functions. In addition, bedside information can be displayed in a variety

of formats, the vendor said. The HP 78532A monitor/terminal

priced at \$7,540.

Hewlett-Packard, Medical Products Group, 100 Fifth Ave., Waltham, Mass. 02254.

HEWLETT-PACKARD CO. Matrix and Line Printers

Hewlett-Packard Co. has nounced four printers including three matrix printers and a system line printer that operates at 300 line/

The HP 2930 family of three character-sequential printers operates at 200 char./sec. Included in the family are a general-purpose printer and a remote workstation printer that can produce bar code and a letter-quality printer for business, technical, manufacturing or personal printing, the vendor said.

The unit's print head uses 12 wires arranged in two staggered columns. A last-form tear-off feature makes it possible to remove the last printed sheet of continuous paper without wasting a blank sheet, the company noted.

Users may choose 5, 10 or 16.36 char./in. printing and both serif and sans-serif fonts. Line drawing, math symbols and character sets in 10 lan-

guages are also standard.
Included in the HP 2930 family is the HP 2932A printer, which was designed for distributed printing appli-cations. For data capture applications, the HP 2933A factory data printer features large-character gen-eration and bar-code printing in se-veral formats. The HP 2934A distribverai formats. The Hr 2944A distributed office printer, designed for business and personal use, offers either a 40 or a 67 char./sec matrix, letter-quality print and 200 char./sec memo-quality printing.

All three printers are supported by the HP 150 and 200 personal com-puters, the HP 1000 and 9000 technical computers and the HP 250 and 3000 business computers. With RS-232C and Centronics Data Computer Corp. parallel interfaces, the printers are also compatible with many other

The HP Series 300 Model 2563A system line printer provides 300 line/min printing for many types of business uses. Featuring compressed print, mulitnational and optical character recognition character sets, ra ter graphics and bar codes, the HP 2563A has noise-reduction features

as well as paper-jam detection.

The line printer can link to HP 3000, 250 and 1000 computer systems through the HP Interface Bus and to a number of other systems through Centronics and Dataproducts New England, Inc. interfaces. The HP 2932A, 2933A and 2934A

matrix printers are priced at \$2,495, \$2,795 and \$2,895, respectively. Re-placement print heads are \$140. The HP Series 300 Model 2563A line printer is \$5,780, including power supply. OEM discounts are available.

Hewlett-Packard, 1820 Embarca dero Road, Palo Alto, Calif. 94303.

The education of managers: getting them to use micros

By Anthony J. Paoni Special to CW#

First of a Two-Part Series

"What are those typewriter-televisions anyway?" is the question on the cover of Peter McWilliams' best-seller, *The Personal Computer Book.* What are they indeed. As businessmen all over the country hoped for a happy and prosperous 1983 to greet them last January, they were served a giant literary bromo as *Time* magazine named the personal computer "Machine of the Year."

Then just before the first-quarter numbers were being tallied and management had finally read the last chapter of Thomas J. Peters' and Robert H. Waterman Jr.'s In Search of Excellence, managers got another literary barrage. This time it was Business Week's turn: "The personal computer explosion is changing the organizational structure of companies as well as the function of managers."

The siege continued with headlines proclaiming "Chip Wars" and "Computer Shock." Amid this ever-increasing public computermania appeared the confident, almost smiling face of IBM Chairman John Opel on the cover of Time with the IBM logo in the background and the title "The Colossus That Works." The smile was probably due to IBM's record personal computer sales.

Uneducated on personal computer

It seems that these typewriter-televisions are everywhere. Yet most management personnel are uneducated on the personal computer, which has found its way into offices, small businesses, classrooms and homes.

There is a need for education on the use of personal computers in corporate business operations. "Not here," many managers say. "I conducted a personal computer session with my company's management. We brought them in for a demonstration, and [the managers] asked questions and seemed interested."

If that was education, the elementary school year could be shortened to one day by bringing in the students, working some math problems on the board, reading a short story aloud and discussing the significance of the Fourth of July. Clearly, that kind of brief exposure cannot be deemed sufficient education.

Picture an organization about to receive a powerful new method of processing one of its vital assets. The management would expect an in-depth review of the background of this new process, a review of its proven capabilities, examples of its use in other organizations and a brief conceptual review of how it functions.

There should be no difference in approach to the introduction of the concept of utilizing personal computers in corporate business operations. Information is certainly a vital asset of an organization and, therefore, the personal computer deserves the status of a powerful new method of processing. Typically, the management information systems function within an organization has the responsibility to encourage the proper use of personal computers and control the potential misuse of this new technology.

There are three parts to an educational seminar: format, content and delivery. Often, participants concentrate on the con-

tent of a seminar and either ignore until the last minute or spend very little time on the other two-thirds of the requirements of a successful seminar.

The audience for a management seminar on personal computers will require that the developer keep in mind the group's level of computer literacy, current perception of the personal computer and the main focus of the seminar.

A central theme for this kind of educational seminar should be to leave the participants with an inderstanding of what a personal computer can do, not how a personal computer works. Concept-oriented, nontechnical meetings of this kind have proven successful in introducing the personal computer in hundreds of organizational structures.

Computer literacy

Management education should include some computer literacy on the trends within the information industry and how the combination of the information center and the personal computer is making this step forward possible.

It is hard to dispute the astronomical success of personal computers which, according to an International Data Corp. projection, will surpass mainframes in 1987 in terms of dollar volume.

An explanation of the use of the personal computer as a management productivity tool is an excellent vehicle to stimulate the audience's interest in what functions it performs. New York-based Booz, Allen & Hamilton, Inc.'s study on knowledge workers — defined as management and nonmanagement professionals — is a revealing description of the highly interrelated work functions of this critical group of workers.

Next in the seminar should be a section focusing on the types of organizations that use personal computers as management productivity tools and the functions they perform.

Success stories

The data processing and non-data-processing publications are filled with success stories about time-saving management uses of personal computers. Best-selling books on the subjects of successful management and worldwide economic trends can provide plenty of material for this section.

Senior management of organizations that have made the commitment to use personal computers will likely say that they are preparing for the shift to a more service-oriented economy. The personal computer will assist their organizations in dealing with the need for timely information, which will be a requirement to perform efficiently and to compete effective-

Computer technology will soon be used as a competitive weapon to fight the competition and to play a strategic role in the success of organizations. The best person to deliver this section is a member of a management team from an organization that successfully uses personal computers.

Paoni is president of Personal Computer Management, Inc. of Wheaton, Ill., a consulting firm that provides seminars on personal commuter for managers.

personal computers for managers.

Next week: software, modeling and

DEC unveils more software

MAYNARD, Mass. — A version of the P/OS operating system is among a series of software products announced recently by Digital Equipment Corp. for its Professional 300 series of microcomputers.

series of microcomputers.
P/OS Version 1.7 includes performance and function enhancements,
DEC said. It was designed to take
advantage of increased memory and
floating-point processing capabilities
that are standard on all Professional
systems. Its license is included in the
system price. Media and documentation are sold separately for \$175.
DEC's PRO/V7M is a complete

DEC's PRO/V7M is a complete Unix system for the Professional 300 series. It costs \$695. RT-11 is DEC's single-user, real-time operating system designed to be operated on DEC's PDP-11 series, including the Professional 300. The single-user price is \$700.

Softech Microsystems, Inc.'s UCSD P-system Version IV.I can now be installed as an application on P/OS to provide a portable application software environment. It can be written in UCSD Pascal and Fortran 77. The price ranges from \$250 to \$475

The PRO/Tool Kit was designed for use on the Professional 350. It is said to eliminate the need for a host system in Professional applications development and offers DEC RSX and VMS program development capabilities on the Professional 350. Licenses range from \$295 to \$495. The Professional Host Tool Kit Version 1.7 is an enhancement that provides improved performance and supports See P/OS page 66

Apple enhances Apple III system

CUPERTINO, Calif. — Apple Computer, Inc. has announced an enhanced version of its Apple III business computer system and an electronic information service for Apple III owners.

The Apple III Plus system reportedly features an interlace video mode, which is said to double screen resolution of text and graphics, a clock/calendar function, an Apple IIe-style keyboard, revisions in the operating system and a reengineered main logic board.

The interlace video mode is said to scan both normal lines and between normal lines, giving the appearance of solid lines instead of dots. The clock/calendar function reportedly allows date and time stamps on files and tracking of sequences of events.

The keyboard reportedly is identical to the Apple IIe keyboard, featuring repositioned cursor control keys, a delete key and a choice of either Qwerty or Dvorak key layouts.

Revisions of the Sophisticated Operating System (SOS) 1.3 and system utilities are intended to support hardware changes that are said to include redesigned four-See APPLE page 66

from page 65

new languages and compilers, the spokesman said. It licenses for \$4,000.

The Whitesmiths Ltd. C Compiler for the PRO/Tool Kit and the Professional Host Tool Kit supports the full C language and offers a library of support functions. It costs \$550 for the PRO/Tool Kit and \$1,100 for the Professional Host Tool Kit.

Application packages that are available include: PRO/Applications Starter Kit, an integrated package of business applications for computer novices, priced at \$399; PRO/Datatrieve, an implementation of DEC's Datatrieve-11 interactive data management system for the Professional 350, priced at \$495; Professional Inter-System Management, which enables a Professional under P/OS 1.7 to communicate directly with IBM mainframes, priced at \$595; and RS/I, a new version of Bolt Barenek and Newman, Inc.'s RS/I Research System for stand-alone use on Professional 350s with hard disks and color monitors, priced at \$1,900.

Other applications include: Maps/PRO Graphics, a business graphics system for the Professional 350 developed by Ross Systems, Inc., priced at \$200; Mechanical Engineering TK! Solverpack, one of a series of applications packages used with Software Arts; Inc.'s TK! Solver that contains 13 general models for mechanical engineering, priced at \$299 for TK! Solver, \$100 for Mechanical Engineering TK! Solverpack and \$100 for TK! Financial Solverpack; and Universal Microprocessor Development system from Boston Systems Office, an integrated development system that is compatible with more than 30 microprocessors. It is priced from \$1,000 to \$3,000.

Hardware announcements include a Real-Time Interface module option, which includes four I/O ports, allowing the Professional to communicate with and control passive data capture devices. It is priced at \$595. Computing Terminal Interconnect licensing is mo-charge licensing of the Professional's bus for third-party

hardware vendors.

DEC, Maynard, Mass. 01754.

APPLE

layer main logic board, peripheral ports on the back panel that use standard DB-25-pin connectors and modified slot housings for easier insertion of peripheral cards.

of peripheral cards.

The Apple III+ system is now available for a suggested retail price of \$2,995.

Apple Serve III is an electronic information service for owners of the systems.

Apple Serve III is said to feature an electronic mail connection among Apple III owners; a bulletin board for exchanging hardware and software tips; referrals and meeting information; an electronic newsletter produced by Apple; and information on software updates and directions for obtaining them.

The service is provided through the Compuserve, Inc. network. A modem and a telecommunications software package are required.

The service is available now for free, although, Apple said, there may be a charge at a later date.

Apple Computer, 10260 Bandley Drive, Cupertino, Calif. 95014.

SYSTEMS

WINTERHALTER, INC. Datatalker II

Winterhalter, Inc. has introduced the Datatalker II, an intelligent frontend processor which allows most popular microcomputers to access IBM and IBM-compatible mainframes and other compunications networks.

other communications networks.
The product is said to plug into a micro's RS-232 serial port. Using several software packages included with the product, the Datatalker II allows a microcomputer to emulate several different remote batch and interactive IBM terminal systems.

The software, currently available for micros running on Digital Re-

search, Inc.'s CP/M, CP/M 86 and Concurrent CP/M 86 and Microsoft Inc.'s MS-DOS operating systems, reportedly allows the connected system to emulate the IBM 3271, 3275 and 3276 interactive terminals and the IBM 3780, 2780, 3741, 2968 and 2770 remote batch terminals.

The unit costs \$995. Winterhalter, 3853 Research Park Drive, Ann Arbor, Mich. 48106.

MULTITECH INDUSTRIAL CORP. Microprofessor MPF-III

Multitech Industrial Corp. has introduced the Microprofessor MPF-III, a microcomputer said to be compatible with the Apple Computer, Inc. Apple IIe.

The MPF-III features 66K bytes of

random-access memory (RAM) and 24K bytes of read-only memory. The vendor said 2K bytes of RAM function as a text buffer for an 80-col. screen feature.

screen feature.

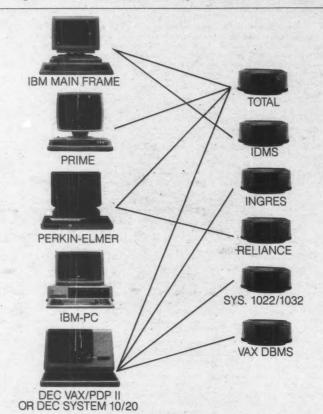

Several standard expansion capabilities are available on the MPF-III including two monitors, cassette unit, a Centronics Data Computer Corp. printer and joystick interface. Optional expansion features include a floppy disk, RS-232C interface, a Zilog, Inc. 280 microprocessor, Digital Research, Inc.'s CP/M and a Chinese character generation card.

ese character generation card.

The MPF-III comes with a 90-key detachable keyboard, the vendor said

The unit costs \$599.

Multitech Industrial, 315 Fu
Hsing N. Road, Taipei 104, Taiwan,
ROC.

MIX VS.

No DBMS matches SEED for transportability. No DBMS offers you a wider range of hardware options now and for the future. Whether you opt for DEC, IBM, Prime, Perkin-Elmer or GOULD CSD.

And SEED lets you transport applications across machines—micro to mainframe or the reverse. SEED also provides the only compatible path from DEC 10/20 to IBM and VAX.

Because SEED is so transportable, it

enables you to standardize development efforts to increase programmer productivity. In short, SEED helps you get the most out of both your hardware and your human resources. And we back SEED with our own resources—a team of experienced professionals that gives you personalized, on-going support and service.

Seed Software, 2300 Walnut Street, Suite 734, Philadelphia, PA 19103.

ONYX SYSTEMS, INC. Price reductions

Onyx Systems, Inc. has reduced prices by up to 12% on several of its 8-bit microcomputer models. Price reductions range from \$240 to \$1,210 on the Onyx Sundance, C5001 and

C8001 series processors.
With these reductions, the price of a Sundance II incorporating an 80-col. Digital Equipment Corp. VT100-type video display terminal, 192K bytes of random-access memory (RAM), a 7M-byte Winchester disk drive and tape backup is \$7,250. The maximum configuration of the Sundance II, with 132-col. display, 192K bytes of RAM, a 21M-byte disk drive

and tape backup, is priced at \$9,750.

The price of the C5001A now

ranges from \$5,990 to \$7,990. The systems include 192K bytes of RAM, tape cartridge backup and a choice of 7M-, 14M- or 21M-byte disk drives. The C5001/MU, which features 256K bytes of RAM and a 14M- or 21M-byte

disk, begins at \$7,990.

The C8001/MU begins at \$10,990, supports five users and has 256K bytes of RAM and a 20M-byte disk. Onyx Systems, 25 E. Trimble Road, San Jose, Calif. 95131.

STORAGE

QUALITY COMPUTER VICES, INC. Bev. Big Blue

Quality Computer Services, Inc.

has announced a 10M-byte, fixed, 5¼-in. Winchester hard disk subsystem said to offer an average data transfer rate of 5M bit/sec, an average latency time of 8.33 msec and a track-to-track seek time of 3 msec. The subsystem, Bev, is part of the vendor's family of 10M- to 84M-byte, 5¼-in. Winchester hard disk subsys-

Also offered is Big Blue, a singleslot card said to run Digital Research, Inc. CP/M 80 programs on the IBM Personal Computer and the Compaq Computer Corp. Compaq without CP/ M. Included with Big Blue are a Zilog, Inc. Z80B microprocessor; 64K-byte random-access memory; parallel and serial ports; serial cable; real-time clock; and hard disk interface. Bev costs \$1,999 and Big Blue costs \$595, the vendor said.

Quality Computer Services, Quees Drive, Metuchen, N.J. 08840.

SEAGATE TECHNOLOGY, INC.

Seagate Technology, Inc. has an-nounced an 8-in. Winchester disk drive, reportedly designed for multiuser networking, graphics and shared-resource systems based on desktop supermicrocomputers.

The half-height ST8100 is said to

feature reduced access time, 102.1M bytes of unformatted storage and a transfer rate of 10M bit/sec. The average access time reportedly is 30 msec, the vendor said.

Evaluation versions of the drive cost approximately \$1,500. They are scheduled to be available in the second quarter of 1984, the vendor said.

Seagate, 920 Disc Drive, Scotts Valley, Calif. 95066.

BASE SYSTEMS CORP. Storage media

BASF Systems Corp. has nounced two media products, a 31/2-in. micro diskette and a high-density 5¼-in. floppy disk.

The 3½-in. diskette has storage capacity of .5M bytes per side. The 54in. floppy disk has a storage capacity of up to 1.6M bytes, the vendor said.

The price is \$7.50 each for the 31/2in. diskettes and \$10.00 each for the 54-in. floppy disks. These products will be available in the first quarter of 1984, according to the vendor. BASF Systems, Crosby Drive, Bed-

ford, Mass. 01730.

EICON RESEARCH LTD. Discache

Eicon Research Ltd. has an-nounced a Winchester disk subsystem for personal computers, reportedly featuring the ability to make frequently used data immediately available from a random-access memory (RAM) cache rather than from a

The Discache subsystem is said to offer 10M- or 20M-byte formatted storage, a 256K-byte RAM cache memory, a microcomputer and an incremental backup system.

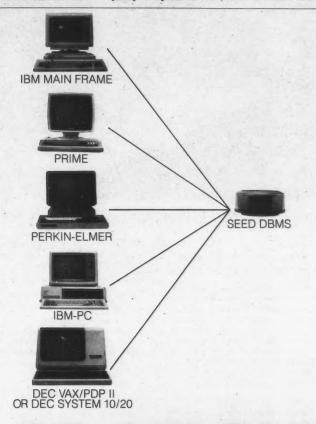

The product is available now at a suggested retail price of \$3,000. Eicon Research, 2157 Park Blvd., Box 60456, Palo Alto, Calif. 94306.

PRINTERS/PLOTTERS PERIPHERALS

COMPUTER STORAGE TECHNO-LOGY, INC. Model CS-400

Computer Storage Technology, Inc. (CST) has announced a microprogrammed magnetic-tape peripheral processor said to meet IEEE 696 standards for S-100 bus compatibility.

The Model CS-400 reportedly can record up to 55M bytes of data on a single 4-in. cartridge and is capable of transferring data to tape at the speed of a streaming tape drive. The subsystem is comprised of a CST Model CC-400 single printed-circuit board peripheral processor, an Intel Corp. 8237 direct memory access (DMA) controller, a Zilog, Inc. Continued on page 69

Get the facts on training in Computerworld Office Automation this February.

This February, Computerworld Office Automation will give you a close look at a whole range of training methods to help you choose what's right for your users: traditional training classes, computer-aided instruction, vendor instruction, on- or off-site training—and lots more. We'll also include a survey of different methods users have tried-and the results.

You'll read about one user's experience implementing an electronic mail system and accounts of how four different types of OA managers are coping in a multi-vendor environment. In addition, you'll get the results of a reader survey on the difficulties in hiring qualified office automation staff so you'll know what to expect.

And that's not all. There'll be feature articles on:

- · Using superminis in office automation
- · The current state of decision support systems
- · The four-phase evolution of integrated

- PBX technology
- · The growing use of on-line databases in

Computerworld Office Automation is designed to give you OA information geared to the DP/MIS environment—in a way that no traditional office publication can. As a Computer world subscriber, you'll be getting six issues of Computerworld Office Automation in 1984as part of your subscription! And if you've got users demanding training, you won't want to miss this first issue on training and implementation strategies.

If you've got office automation products our readers should know about, then you need to get your ad reservation in by January 6th. The materials are due one week later on January 13th. To reserve ad space in this February 15th issue of Computerworld Office Automation,

call one of the sales offices listed below, or Ed Marecki, National Sales Director at 617-879-0700.

ALPHACOM, INC. Alphacom 42

Alphacom, Inc. has an nounced a price cut for its 40col. home computer printer.
The Alphacom 42 univer-

sal printer, which reportedly uses a single-chip micro-processor and thermal technology, is said to operate at 2 line/sec and to feature bitmapped graphics.

The unit is now priced at \$79, plus \$20 for an interface for most systems, according

to the company.

Alphacom, 2323 S. Bascom Ave., Campbell, Calif. 95008

BOARD-LEVEL DEVICES

ATRON CORP. **PC Probe**

A hardware and software debugging tool for program development on the IBM Personal Computer and compatible systems has been intro-duced by Atron Corp.

Called the PC Probe, the device consists of a printedcircuit card that fits into any Personal Computer card slot, an umbilical cable and probe that plugs into the Personal Computer's 8088 integrated circuit socket and debugging software on a floppy dis-

Designed for all standard high-level personal computer languages, including Macro Assembler, Pascal Compiler, Fortran Compiler and C Compiler, the PC Probe reportedly contains support for de-bugging both hardware and

Since it can access all Personal Computer bus signals as well as the 8088 CPU, Atron's tool can monitor and

trap on interrupts and direct memory access requests as well as on standard CPU operations, the company not-

Other features of the PC Probe include symbolic de-bugging capability, program patching, macro commands and program crash recovery, the vendor said.

The PC Probe sells for \$2,195 in single quantities, with multiple quantity dis-counts available.

An optional eight-channel test clip cable costs \$100, the vendor said.

Atron, 21075 Bank Mill Lane, Saratoga, Calif. 95070.

TEXPRINT, INC. Print-It Model 2

Inc. Texprint, has nounced Print-It Model 2, a parallel printer interface for the Apple Computer, Inc. family of computers.

Featuring 64K bytes of internal read-only memory, 202 graphics modes, 25 text modes and seven format modes, the Model 2 is compatible with Apple II and IIe microcomputers and over 15 models of printers, the vendor said.

Print-It Model 2 is said to handle 40- or 80-col. text, a standard and alternate font, color or black and white, low- and high-resolution graphics, double high-resolution graphics and, on the Apple IIe, automatic selection of the proper print format to match the current display screen

The Print-It Model 2 card including handbook and printer cable, is available for an introductory price of \$99, according to the vendor. Its retail selling price will be \$174.

Texprint, 8 Blanchard Burlington, Mass. 01809

Data Communication Products Department of GE is now an Independently owned company called Genicom.

At Genicom today, we offer the same complete line of printers we offered while a part of General Electric. We have the same facilities, the same nationwide service network, and the same corps of ex-

perienced employees... only the name has changed. Above all, Genicom offers you the same reliable product quality you've come to expect from us over the years. Our Genicom 3000 printers feature outstanding performance for end-users as well as superior flexibility for many OEM's, distributors, retailers and ics. Selectable type fonts, American craftsmanship and more. There are even 3000 family printers for personal computers...ideal for business needs.

We're proud of the excellent brand reputation we

ablished under General Electric. But now we're going to make a new name for ourselves by bringing you more innovations, and more of the reliable quality you've always found in each of our products. Genicom Corporation, One General Electric

ADVANCED LOGIC SYS-TEMS

Advanced Logic Systems (ALS) has introduced an inte-grated package of hardware and software for the Apple Computer, Inc. Apple II family of microcomputers.

This package, called The Business Card, includes the vendor's T/Maker III soft-

board offering Digital Research, Inc.'s CP/M Plus operating system

T/Maker III is an integrated program that includes word processing, spreadword processing, spread-sheet, list management and bar charting capabilities. With this program, there

is no need to transfer data between programs.

Business Card is

T/Maker III is \$275.

Current users of either the ALS CP/M Card or Z-Card can purchase T/Maker from

ALS for \$165. ALS, 1195 E. Arques Ave., Sunnyvale, Calif. 94086.

INTELLIGENT TECHNOLOGIES INTERNATIONAL

Clusternet 3270

Intelligent Technologies

International Corp. (ITIC) has introduced an enhance ment to its PC Express communications package that it claimed will broaden the package's range of applica-tions in IBM's Systems Network Architecture (SNA)

Called Clusternet 3270. the new enhancement is said to be a printed-circuit board with SNA software that per-mits an IBM Personal Computer to serve as an IBM 3274 cluster controller linking as many as 12 Personal Computers with a mainframe.

The Clusternet 3270 board resides on a central Personal Computer, which is linked to the mainframe via a dial-up or leased telephone line and an external modem operating at 2,400, 4,800 or 9,600 bit/

According to the vendor, the new package will be available for delivery in the first quarter of 1984 and is available as a standard feature of the PC Express with the SNA package, which is priced at \$1,295.

ITIC, 151 University Ave., Palo Alto, Calif. 94301.

AUXILIARY EQUIPMENT

DUNCAN-ATWELL COM-PUTERIZED TECHNOL-OGIES, INC. Lenipen/XT; Lenipen/Jr.

Duncan-Atwell Computerized Technologies, Inc. has announced color graphics systems for IBM microcomputer users, including artists, architects, computer-aided design and manufacturing engineers, doctors and graphics programmers.
The Lenipen/XT was de-

signed for use with the IBM Personal Computer XT and XT/370 and compatibles.

A scaled-down version of the Lenipen/XT, the Lenipen/Jr., was designed for the IBM PCjr.

Both products are said to be direct derivatives of the vendor's Lenipen 1.0.

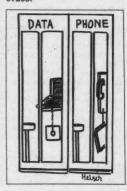

The products reportedly support various I/O devices, with light pens as the pri-mary source of graphics in-

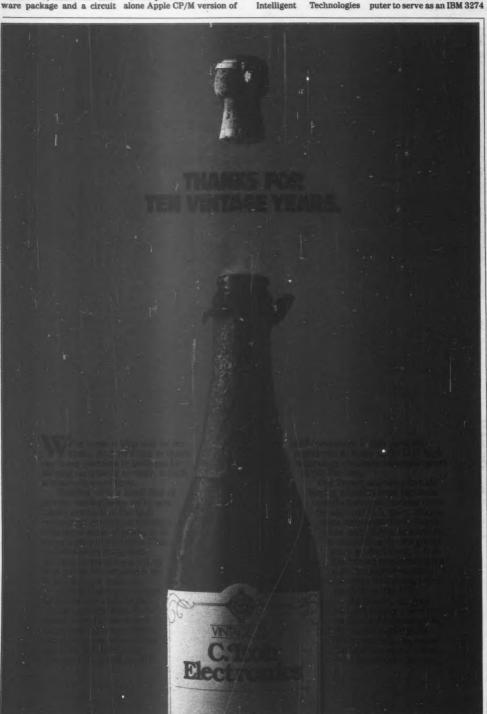

The vendor said the products provide for user logic programming, which allows the user to create a graphics image with a light pen, mouse or keyboard, while the system creates a Lenigram program of the image that

can be saved and recalled.

The Lenipen/XT is priced at \$695, and the Lenipen/Jr. is \$345.

COMPUTER INDUSTRY

Semi demand sign of times

INDUSTRY INSIGHT

BILL LABERIS

If you are knowing just the computer industry will all in the new year, look no

further than the semiconductor sector.

Simply put, the companies that make the elemental pieces of computer systems massive and small generally cannot meet demand for their products now. The worst case (or best, depending on how you look at it) is given by the micro-processor makers, which in some cases will meet no more than 25% of the demand for their processing

The pace of recovery in 1983 clearly caught the chip makers off guard, and thus they were slow in ramping up production, especially since most of them had reacted to the 1982 recession with layoffs. This, compounded by the fact that it takes about four months to pro-duce a typical memory or processor chip, has sent many computer makers scrambling to find reliable sec-ond and third sources for key com-

But all too often in recent months computer makers have had to deal with the harsh reality that their components suppliers are just sold out, making promises of no better than six-month-plus lead times in many cases

However, 1984 will likely witness a scenario wherein semiconductor supply finally catches demand, as production shortages abate and the industry settles into shipping about 3.5 billion chips per month — a full 60% above 1983 levels and nearly 200% above 1982

For system makers and end users alike, one result of this boom See SEMI page 80

Retail chains vary strategies Few employ marketing plan aimed at big business

ENTRE COMPUTER

Computer store chains are uniformly involved in a rapidly growing business, but the strategies employed by such chains to target their services to particular business markets are apparently quite varied.

Three nationally recognized chains of var-ying size were recently queried by Computerworld about strategies developed to target that segment of busi-

ness represented by the Fortune 1,000 list. Only one company said it em-

Corp., the largest com-puter store chain with more than 550 fran-

chised stores open na-tionally; Entre Computer Centers, Inc., which identified itself as the second largest chain with 100 stores already open and fran-chises granted for an additional 100 stores that are opening at the rate of 15 to 25 a month; and Byte Industries, Inc., an up-and-coming organization with 19 Byte Shop dy opened and plans to expand its market with revenues from an anticipated public offering slated for this month.

Both Byte Shops and Entre first began franchise operations in 1982, although the

original Byte Shop was opened in 1975. Computerland, which more than doubled sales volume to about \$1 billion in 1983, was founded in 1976 and opened the first store in 1977. Entre posted \$28 million in sales to franchises in 1983, up from \$687,444 during its first year of operations; Byte Industries would not comment on sales volume because of the pending offering.

'We are not a home computer retailer," de-

clared Entre's advertising director Michael H. Savage during a recent interview. "We are con-

ploys a specific strate-gy for targeting big business.

Contacted were officers of Computerland

centrating almost en-tirely on business, including small business, professionals and corporations."

Entre, with an esti-mated 50% to 60% of its ComputerLand sales going to big busiwas the chain with a specific strategy for gaining a

foothold in the corporate marketplace. Entre also recently announced a public offering, with revenues to be used for "general corporate purposes.

Byte Shops, according to President David Pava, have a three-pronged marketing ap-proach aimed at the "high-end home use," personal productivity applications in all types of businesses and specific vertical market applications in which it intends to be-See RETAIL page 80

National Semi reports strong gains

SANTA CLARA, Calif. - Reflecting the continued boom in demand for micro circuits of all types, National Semiconductor Corp. reported strong quarterly gains in sales and profit as well as record-setting order rates.

For its second quarter, the company posted sales of \$369 million, a 33% increase compared with the same period a year earlier. Profit in the quarter totaled \$13 million, or 15 cents per share, compared with a loss of \$3.5 million in the second quarter a year ago.

Commenting on National Semi's performance, Charles E. Sporck, president and chief executive officer, said both the compa-ny's components and systems divisions

showed continued bottom-line improvement

In addition, Sporck reported that capital spending in the first six months of fiscal 1984 jumped 38% to \$83 million, with total capital spending for the year expected in the \$200 million range, compared with \$131 million in fiscal 1983. A significant portion of the current capital outlays will be directed at increasing current wafer fabrication capacity, including the construction of a new plant in Arlington, Texas, and a new research and de-

velopment center here.
"Our goal," Sporck said, "is to expand fabrication and assembly capacities to meet current and projected growth in demand."

peripherals work harder, more effectively. Directs critical on-line services to another CPU when failure

We make five basic models to provide up to eight switchable interfaces each of which can be logically connected to as many as eight CPUs. Want to whip up more facts? They're in our new brochure. Write or call for it today.

Stanford gets grants to study link between languages

PALO ALTO, Calif. Grants totaling \$21 million have been awarded to a group of computer scientists, philosophers, logicians and linguists at Stanford University in an attempt to create a breakthrough in man's un-derstanding of the link

between natural and computer language.

The grants, made by the System Development Foundation of Palo Alto to the Center for the Study of Language and Information, will extend over four years and will eventually sponsor re-search by almost 100 professors, postdoctoral students and researchers from Stan-ford, SRI International, Inc. and Xerox Corp.'s Palo Alto Research Center (Parc).

"The purpose of the project is to take the body of insights into language from lin-guistics, logic, philosophy and the humanities together with the new challenges posed by computational languages and develop theories adequate to both," according to Jon Barwise, who is director of the Center for the Study of Language and Infor-

Through their studies, the researchers have developed a new view of language, Barwise said. This view is that language and computation are two sides of the same coin. Central parts of the study of language computer science make up a single subject matter, which they have termed "situated

language."
Terry Winograd, a professor of computer science at Stanford, said, "It is not our goal to create new applications, rather it is to establish theories essential to the design of computers and, by bringing people together from different disciplines, to create a body of knowledge that will allow us to lay the foundation for a whole new discipline.'

According to the researchers, situated languages include natural languages like English and Chinese as well as computer languages such as Pascal and Lisp. This view of language centers on three complementary insights: that natural language use is fun-damentally computational, that computational practice is fundamentally linguistic and that understanding linguistic activities in any real situation requires theories based on solid semantic foundations, theories that con-nect computation and language with information from the world.

This theoretical frame work will be the basis not only of a deeper understand-ing of natural language and computation, but the basis for practical developments involving the interaction of computers and humans," the researchers noted in a paper to the foundation.

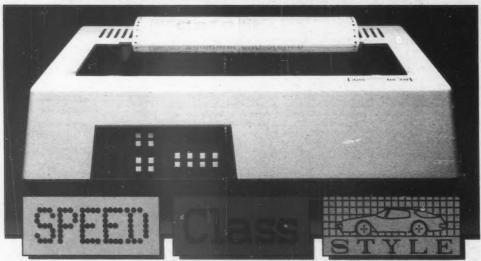

These theories, Winograd claimed, challenge tradition-al logic by asserting that the truth of any statement is not absolute, but is related to the context, or situation, in which it is made.

Charles Smith, director of charles Smith, director of programs for the foundation, claimed, "This notion is cen-tral to making computers work intelligently."

The research at the Stan-ford campus has been going on informally for the past two years.

Brian Smith of Xerox's Parc has taken the group's ideas to develop the 2-Lisp and 3-Lisp computer lan-guages, which reportedly enable computers to ask questions of themselves about their own state, a capability known as the power of re-

The Stanford research will be supported by more than 100 Xerox 1108 Dandelion workstations, three Digital Equipment Corp. VAX-11/ 750 superminis and a DEC 2060 mainframe. The systems will be tied together by Xerox's Ethernet local-area network.

INTRODUCING THE NEW DS 220 MULTI-MODE MATRIX PRINTER

First there was the Datasouth DS180. The original high-performance printer. The printer that raised the standards of on-the-job performance to new heights. A tough act to follow.

And now, following in the same tradition, is the new Datasouth DS220. State-of-the-art performance, taken to higher levels. In a new 3-speed multimode form. Ready to run data, near letter quality and graphics output—in a single printer.

At data speed, the Datasouth DS220 leaves competitors in the dust. By using high speed tabbing to zip over blank spaces and true logic seeking to print the next available

character, the Datasouth DS220 charges through printed copy at speeds rivaling more expensive line printers

At 40 CPS NLQ speed, the Datasouth DS220 creates near letter quality output with the kind of class that might make you wonder if it was produced by a daisy wheel printer. With its fine tuned 18 x 48 dot matrix, multiple fonts are produced with the precise darity required for word processing applications. And for graphics, the Datasouth

DS220 adds high performance style to popular microcomputer applications programs through high resolution dot

addressable output. Sharp new details emerge from business charts and graphs, and engineering

drawings.

And those are just its printing capabilities. Its fully instrumented dashboard allows push button pro-gramming of up to fifty features for forms control, communications and print style selection.

Best of all, the Datasouth DS220 costs much less than you might expect for a high performance three speed. Go to your nearest showroom and run a Datasouth DS220 through the gears. See how little it costs to own three high performance printers in one high performance package.

U.S. high tech must return to basics: panel

To restore reputation as world leader

PALO ALTO, Calif. - U.S. highreal Alto, Cair. — U.S. night the recently formed President's Comtending industries will have to get mission on Industrial Competitive back to basics if they are to restore ness, Young, who was appointed by their reputation for world leader president Reagan to chair the comship, according to John Young, president and chief executive officer of to the malaise affecting many of the

Hewlett-Packard Co.

Speaking at the second meeting of the recently formed President's Com-

nation's economic sectors.

At the same time, Young said, the commission's view is that U.S. industry does not suffer from an incurable disease, but is rather in need of vigorous rejuvenation.

"In dealing with the questions of industrial competitiveness, I tend to concentrate on fundamentals such as capital resources and trained man-power," Young said.

"Without the fundamental ingre dients, we cannot stay in the competitive race and, so, returning to the basics is the business now facing the nation," Young told a press conference following the commission hear-

Young said the commission, charged by Reagan with reviewing ways to increase competitiveness, especially in high technology, will make specific proposals during the course of its deliberations before issuing a final report by December

"Our aim is to look for specific ar-eas that can make a difference in some measure to creating a forward motion that over time can have a considerable impact," he said.

Also at the commission hearing, John Ong, president of B.F. Goodrich Co. and co-chairman of the commission's subcommittee on international trade with Robert Noyce, vice-chairman of Intel Corp., admitted that the commissioners are unlikely to come up with proposals that sharply increase the administration's controversial budget deficit, currently approaching \$200 billion.

We are trying to avoid being just another advocacy group, with a list of proposals that do not take account

of current realities," Young added.
Ong stressed the commission's goal was to identify public policy areas in which it can recommend government action, for example, tax credits or propose congressional legislation to deal with a specific prob

"The more carefully thought out our proposals, the more effective we will be as a commission," according to Ong.

In his presentation to the commission, David Crockett, president of Da-taquest, a Silicon Valley, Calif.-based market research firm, said Japan will continue its dominance in many areas of the semiconductor market.

In the area of 256K-byte dynamic

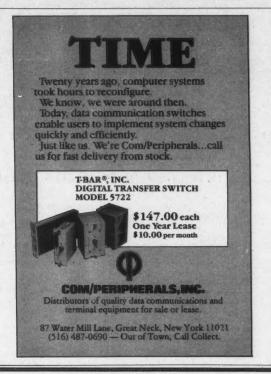

random-access memory (RAM), he contended, the major Japanese manu-facturers, such as Hitachi Ltd., Fu-jitsu Ltd., Nippon Electric Co. and Toshiba, will ship around 14 million units this year, compared with 800,000 in 1983.

Crockett estimated Japan's share of the immature dynamic RAM market at 76%. "In the 1980s, the technology thrust will shift from dimension reduction to applications," he told the commission.

Commission members include several high-level industry figures, such as Mark Shepherd, chairman of Texas Instruments, Inc., and Noyce;

respected academics, such as Michael Porter, professor of business administration at Harvard University; and government officials, including George Keyworth, science adviser to the president.

Among the areas being investigated by the commission are capital resources, research and development, manufacturing, human resources, in-ternational trade and industrial strategy.

The research will be con-

ducted in four areas. The first two research projects will concentrate on enhancing existing AI languages; the other two research projects will concentrate on developing an expert system to assist users in accessing a computer system.

Sperry

Clarification: In response to an industry analyst's claims about Tandy Corp.'s Model 2000 microcomputer [CW, Dec. 26/ Jan. 2], a Sperry Corp. spokesman acknowledged the Tandy machine's edge in processing speed, but credited his own firm's micro with providing superior IBM compatibility. The Sperry comments were received after press time.

Anacomp defaults on lending agreement

INDIANAPOLIS — Financially troubled Anacomp, Inc. has defaulted on portions of a \$45 million lending agreement with several of its creditors as efforts to reach a refinancing agreement have failed.

According to company officials, Anacomp did not honor all conditions of loans made to it by Chase Manhattan Bank and Manufacturers Hanover Corp. in New York, Bank of America in San Francisco, Fletcher National Bank in Indianapolis and Lloyds Bank International Ltd. of London.

London.

The systems integrator and software house has suffered losses in excess of \$16 million in its last two report-

ing quarters, with substantial losses anticipated in the quarter ended Dec. 30. The company had been mentioned as a possible merger candidate [CW, Nov. 28].

To counter its losses, which were due in large part to delays Anacomp has experienced in marketing a banking software program, the company has reduced its work force by about 10%, or 220 workers, and cut salaries companywide.

The company has also reigned in capital spending and ceased dividend payments.

Meanwhile, Anacomp is seeking to spin off its data services business to raise capital.

Micro Age

"BECAUSE WE COULDN'T AFFORD MISTAKES!"

"They guided us over the rough parts when we needed it"

"During September of 1982, we started our MicroAge Computer Store in Tulsa, Oklahoma with 3 people. Today we have 11 people working for us and we're still hiring. By following MicroAge's advice and marketing strategy when we started in business, we were able to reach Tulsa's business computer buyers in a much shorter time than we could have on our own."

"Both of us had technical backgrounds in computers but lacked the marketing experience necessary to reach our goals. We used MicroAge's experience and leadership to guide us through the rough spots and boost our sales and marketing potential.

"MicroAge...they helped us build a sales organization to reach the Oklahoma businessman."

Market research firm offers subscription plan

ROCKVILLE, Md. — A computer market research firm has announced the availability of a subscription program for clients wishing to sell information and telecommunications technology and services to the federal government.

Input claimed its Federal Information Systems and Services Program provides information on executive agencies' expenditures for automated data processing and telecommunications through 1990.

Input said that the program interprets the government's procurement plans for use by companies in their

planning processes.

According to Input, the procurement plans of government executive agencies are public information, but often use reporting techniques that obscure the size of acquisition programs.

Thus, Input said, the list of major systems acquisitions published by the U.S. Office of Management and Budget, General Service Administration and National Bureau of Standards is incomplete.

More information on the program is available from Input, located at 11820 Parklawn Drive, Rockville, Md. 20852.

sable at \$79.60

Take this comprehensive 8-volume Auerbach Data Processing Management Library for just \$2.95 when you join The Library of Computer and Information Sciences.

You simply agree to buy 3 more books—at handsome discounts—within the next 12 months.

It's a worrisome burden for computer

Not only do you need specific technical expertise, but you have to know how to use it in support of business objectives and goals.

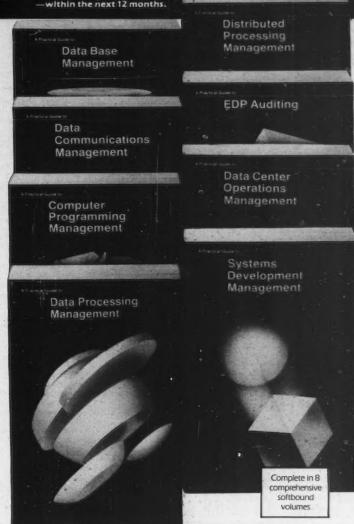

For more than 25 years Auerbach has served the information needs of computer professionals, assisting them to increase their effectiveness and enhance their careers.

That's why the Auerbach Data Processing Management Library has become an indispensable tool for every data processing professional.

These eight volumes are published at \$9.95 each and cover all the specifics of **Data Processing Management:**

- 1. Data Processing Management. Long Range Planning Policies and Procedures. Decentralized Computing. Systems Implementation. Selecting Software Packages. Structured Techniques. \$9.95
- 2. Computer Programming Manage ment. Estimating Software Costs. Designing Modular Programs. Decision Tables. Acquiring and Approving Programmers. Testing. Program Maintenance. \$9.95
- 3. Data Communications Management. Communications Technology. Formulating Network Requirements: Data Security. Disaster Recovery Planning. System Network Architecture (SNA). Digital Communications. \$9.95
- 4. Data Base Management. DBMS Implementation Planning. Data Base Design. Distributed Data Bases on Unlike Computers. Case Studies. \$9.95
- **5. Systems Development Management.**Organizing for Project Management. UserOriented Systems Analysis and Design. Using a Systems Consultant. Evaluating Software Packages. Structured Walkthroughs. **\$9.95**
- 6. Data Center Operations Management. Documentation. Career Planning in Operations. Developing a Scheduling System. Evaluating and Negotiating with Vendors. Selecting Data Security Software. \$9.95
- 7. EDP Auditing. Defining Objectives. Writing Audit Reports. Cost/Benefit Review. Test Design for Systems under Development. Application Programs. Auditing Microcomputer-Based Systems. Hardware Acquisition. **\$9.95**
- 8. Distributed Processing Management. Establishing Controls. Operational Costs. Information Confidentiality. User Chargeback Procedures. Protocols and Compatibility. **\$9.95**

The Library of Computer and Information Sciences is the oldest and largest book dub especially designed for the computer professional. In the incredibly fast-moving world of data processing, where up-to-date knowledge is essential, we make it easy for you to keep totally informed on all areas of the information sciences. In addition, books are offered at discounts up to 30% off publishers' prices. Begin enjoying the club's benefits todayl

The Auerbach Data Processing Management Library ...

4 Good Reasons to Join

- The Finest Books. Of the hundreds and hundreds of books submitted to us each year, only the very finest are selected and offered. Moreover, our books are always of equal quality to publishers' editions, never economy editions.
- 2. Big Savings. In addition to getting the AUERBACH DATA PROCESSING MANAGEMENT LIBRARY for only \$295 when you join, you keep saving substantially—up to 30% and occasionally even more. (For example, your total savings as a trial member—including this introductory offer—can easily be over 50%. That's like getting every other book freel)
- inke getting every orier book relea!

 3. Bonus Books, Also, you will immediately become eligible to participate in our Bonus Book Plan, with savings up to 70% off the publishers' prices.

 4. Convenient Service. At 3–4 week intervals (16 times per year) you will receive the Book Club News, describing the Main Selection and Alternate Selections, together with a dated reply card. If you want the Main Selection, do nothing and it will be sent to you automatically. If you prefer another selection, or no book at all, simply indicate your choice on the card, and return it by the date specified. You will have at least 10 days to decide. If because of late mail delivery of the News, you should receive a book you do not want, we guarantee return postage.

If the reply card has been removed, please write to: The Library of Computer and Information Sciences, Dept. 7-CC2, Riverside, N.J. 08075 to obtain membership information and an application.

Market for portables still strong but fragmenting

SZUPROWIC

The so-called portable computer is fast bethe coming talkedmost variant of the personal computer revowhat is not entirely clear is that some of the portable computer promoters are also getting carried away with a lot of very heavy media hype not un like that which preceded the home computer shakeout of recent months.

The portable computer market is also splintering rapidly into several segments, including desktop, suitcase (transportable or luggable), briefcase and notebook categories. Some ana lysts also throw hand-held computers into what is sometimes dubbed share, followed by IBM-compatible the "mobile" computer products maker Compaq Computer Corp.

All this only further confuses the end users and investors alike who are still trying to recover from the shock of the rapid demise of Osborne Computer Corp. after its spectacular rise to portable computer pioneering preninence in just two years.

Despite that bankruptcy, market forecasts suggest that during 1982 nearly \$300 million in portable computers were sold, primarily in the U.S., which so far accounts for 90% of the market. For 1983, this market will likely increase more than 200%.

In the longer run, a tenfold increase in the sales of portable computers is seen within the next few years, and between 20% to 25% of all microcomputers in use by 1987 are

expected to be in that category.

Whether or not portables will remain similar to those now capturing the imagination of end users is another matter.

Chances are that technological developments are so rapid and competition so fierce that new, much more portable computer products will be thrown at users at an ever-increasing pace for the conceivable future, make ing existing models obsolete almost overnight.

So far the bulk of portable computers is of the transportable, suitcasesize variety, weighing from 18 to 40 lb and being no more portable than the average home TV set. Studies show that up to 80% of those machines are never moved and that they are used mostly in business applications, as they are cheaper than standard desktop units that would otherwise be used. Due to strong initial sales, Osborne dominates

maker Compaq Computer Corp.
The next supplier with a rea ble market share thus far is Isbytec Corp. of Canada, whose Hyperion has about 5% of the total. The remaining 25% of the market is being split by at least two dozen firms that have since entered the business

What few outsiders realize, however, is the fact that the market for these relatively heavy portables has already peaked and is being overtak-en by lighter, cheaper and almost equally powerful briefcase portable

Some of these are sufficiently compact that you may be tempted to take one with you even when you are almost sure that you will not need to use it. That is the true test of portability in computers.

Even more convenient are the notebook portable computers, which are under 6 lb in weight, although their capabilities today are still somewhat limited.

But rapid developments in custom very large-scale integration micro-chips and solid-state memories as well as low-power, flat panel displays guarantee a veritable flood of new portable designs, and current product life cycle is seldom more than two to three years at best. Perhaps the best indication of fu-

ture trends is the fact that current portable computer market leaders Kaypro, Inc. and Compaq are already rumored to be working on briefcase, lightweight portables presumably of the 16-bit IBM Personal Computercompatible variety. This is signifi-cant in that both companies insales dramatically their during 1983. Kaypro posted a 1,400% revenues increase to more than \$75 million and promptly went public at \$10 per share as soon as it became profitable.

Rising Reve

Compaq's revenues rose spectacularly from \$4.8 million the first quarter of 1983 to \$18.1 million in the second and \$36 million in the third, when the company became profitable.

Compag has been very well financed with almost \$30 million in venture capital and is already rushing to go public, registering six million shares for sale last October.

But at the time Compaq also stated that its backlog for deliveries through the fourth quarter of 1983 was only \$40 million. This suggests that while the company may indeed do \$100 million of business in 1983, the explosive revenue growth period may be over.

Rapidly growing competition is not the least factor affecting such growth. Anderson-Jacobson, Inc.; Columbia Data Products, Inc.; Computer Devices Corp.; Corona Data Systems, Inc.; Dynalogic Information Technology Corp.; Eagle Computer, Inc.; and Seequa Computer Corp. are all now in the market with 16-bit IBM Personal Computer-compatible transportable computers of the same category.

Introducing MARK V™ for CICS users: a unique, 4th generation non-procedural application development system that saves you time and money at every stage of your application life cycle-and makes it all easy.

Informatics just broke the productivity barrier with MARK V, an extraordinary timesaving application development system. But, MARK V is not for everyone. *It may be* for you if:

- You need help in reducing your backlog of medium to complex CICS applications.
- You use CICS with IBM-supported data access such as VSAM or DL/I.
- Your CICS system demands highly efficient application execution.

Then, MARK V can help you produce efficient compiled applications that rival the execution of well-written COBOL-in less than half the development time!

Easy application development and maintenance is just the beginning! MARK V improves productivity throughout

the application development and maintenance cycle-not just in the codingby providing:

- Interactive application design and simulation
- · Easy to use, menu-driven specification language for development and maintenance

- Transparent and complete data access/ communications control
- Automatically produced application documentation

That means with MARK V your programmer need only specify the solution. MARK V generates the complete application. This methodology allows you to solve more complex problems more efficiently using less highly trained personnel-and that saves you money!

Reserve your free demonstration of MARK V-the simple new way to develop and maintain your medium to complex CICS applications.

As a data processing professional, you're also a professional skeptic. But the simplicity, versatility and timesaving capabilities of MARK V are easy to see-and prove. To do so, simply mail the coupon below or call toll free. We'll schedule your free demonstration as quickly as we can Remember, however, that interest in MARK V is unusually high. Scheduling is on a "first come" basis. So mail the coupon or call today.

To see MARK V CICS for yourself, mail the coupon or call toll free 1 800 227-3800, ext. 911

THE SOFTWARE ENGINEERS

	USIVE OFFER FOR CICS USERS WITH IBM-SUPPORTED DATA ACCESS
WEO	I want to learn how MARK V can make my

YES. medium to complex applications development and maintenance both fast and easy.

- Please call me to arrange a free demonstration right away. I understand that there is no cost or obligation.
- I'm not yet ready for a free demonstration. But please send me a free fact kit on the MARK V application development system.

Address

DEMAND

from page 71

should be the ability to manufacture and market the next generation of memory chip — the 256K-byte random-access memory — a little more quickly than had been predicted. Right now, Texas Instruments, Inc. is passing out samples of its 256K-byte version; Intel Corp. and National Semiconductor Corp. will do the same in the first or second quarter of this year; Motorola, Inc. will be sampling in the second half of the year; and Advanced Micro Devices, Inc. should join the pack in early 1985.

In addition, greater sales and profits will yield greater research and development and capital investment dollars, making possible the first shipments of a 1M-bit chip by as early as 1986.

These and other key bits of semiconductor data have been made available by semi-conductor management, which heretofore had been somewhat closemouthed.

Depending on whom you believe, it was either an administrative foul-up, a misunderstanding of commonly accepted protocol or a miserly act of Scroogian proportions.

act of Scroogian proportions.

But whatever the case, a lot of trade press and business press people were a bit upset with AT&T when the communications behemoth declined to pick up the luncheon tab for the press when company chairman Charles Brown spoke to the New York Security Analysts Society just before the holidays.

How upset? Given the then-announced demise of Western Electric Corp. and the impending Jan. 1 divestiture, Brown's appearance would ordinarily have drawn legions of media types. Perhaps a half-dozen actually showed up.

It wasn't the \$20 luncheon fee that scared them off. The press simply does not pay to cover a news event. This long-standing practice made particular sense in this case, a luncheon for a \$100 billion company fea-

RETAIL

from page 71

come the "total solution" stores for specific markets. Big business, per se, has "not been identified as a specific group that we are going after.

At Computerland, according to Vice-President Don McConnell, the specific marketing strategy is to "support the franchisees' marketing efforts for whatever segment they are targeting. To the extent that they seek the Fortune 1,000 companies, we support them with products, training and engagement support.

training and customer support."
To that end, McConnell added, Computerland offers franchisees its Class program — Computerland Large Account Support Service — to assist in negotiating large account customers and providing ordering and invoicing services.

The benefit of dealing with computer stores for big business rather than a vendor's direct sales force, according to Entree's Savage, is that "a prospect is not locked into a single brand." Entree offers a mix of several popular micro brands and "has a very strong value-added concept." By offering servicing, training, education and support, he added, "we just don't sell them a piece of hardware and kick them out the door."

turing its chairman, whose intent was to take the podium and hit homerun balls. And the press wasn't allowed in without paying for lunch.

As a rule, according to the Analysts Society, the guest company picks up the press tab, no questions asked. Prior to its luncheon, AT&T reacted to the press protestations by saying it would have been silly for the company first to be invited to lunch, then to have to pay for a portion of it, albeit a very small portion.

Eventually AT&T saw the error of its ways and held a hastily called press conference the morning of the luncheon. The press conference was free of charge.

However, one attendee mentioned something about a collection plate next to the press table.

AT&T to aquire 25% of Olivetti

NEW YORK — In a move designed to power a major thrust into the European computer market, AT&T agreed just before the year-end holidays to pay \$260 million to acquire £5% of Italy's Ing. C. Olivetti & Co. AT&T maintained an option to increase that stake to 40% after four years.

The deal involves the purchase for cash by AT&T of 100 million newly issued Olivetti shares sometime during the first quarter of this year.

Under the terms of the agreement, Olivetti will begin distributing AT&T's products, including switching equipment, private branch ex-

changes, software and microprocessors. AT&T, however, has made no agreement as of yet to distribute Olivetti's office automation products in the U.S., a market in which Olivetti is not a major player. Such an agreement is being negotiated, AT&T said.

not a major player. Such an agreement is being negotiated, AT&T said. In general, analysts felt that Olivetti's European market presence would be a major boon to AT&T in that sphere, while AT&T's financial backing and tech support would yield the greatest benefits to Olivetti. AT&T has a limited communications presence in Europe, due largely to the state-controlled communications systems in many European countries.

THE LEADING EDGE OF MINI

It's been going on for years. Somebody comes out with

Somebody comes out with a grown-up version of last year's mini. It sets a new standard of performance. So the whole industry follows along.

Not to be outdone, somebody else sets a new standard for price. And everybody rushes to catch up all over again.

There's only one little problem. So far, nobody's ever given you leading edge performance and a hot new price on the same system

Well, at Wicat, we took a good hard look at this particular kind of progress. And headed 180 degrees the other way. Instead of parading out one grown-up mini after another, we created the first generation of grown-down mainframes.

There are seven of them in all, from a single-user desktop to a full-blown 48-user system. And from the bottom of our line to the top, we'd like you to compare our price/performance

EXECUTIVE CORNER

Herbert M. Shanzer has been named vice-president and general manager of the new Desktop Division

of Data General Corp.

Michael Barker has been named vice-president, manufacturing operations, at Micom Systems, Inc.

David J. Stewart has been promoted to vice-president, development programs, for the System Sciences Division of Computer Sciences Corp.

James F. Ferenz has been

named vice-president of manufactur-

ing at Fortune Systems Corp.

Jerald B. Higgins has been promoted to vice-president, worldwide systems sales for Zilog Systems, a division of Zilog, Inc.

■ Arthur D. Lambert has been named vice-president, North Ameri-can sales for Zenith Data Systems

Dr. John Francis Lubin, professor of management at The Wharton School, University of Pennsylvania, has been elected to the board of directors of Data General Corp.

D. T. Wiles, chairman of the investment banking firm of Hambrecht & Quist, has been elected chairman of Magnuson Computer Systems, Inc. Magnuson Computer Systems has been operating under the protection of Chapter 11 of the Federal Bank-

ruptcy Code since March.

Martin Marietta Data Systems,
Inc.'s Vice-President Shirley F. Prutch has been named chairwoman of the National Bureau of Standards' Panel for the Institute for Computer Sciences and Technology for a three-year term. She will also serve as an ex officio member of the Board on ssment of the National Bureau of Standards Programs.

Dean O. Morton, executive vice-

president of Hewlett-Packard Co., was elected chairman of the board of directors of the American Electronics Association for 1984 at its recent

board meeting.

Donald L. Steele has been appointed vice-president of University Computing Co. and general manager of its applications software division.

Computer Consoles, Inc. has an-

nounced the appointment of four vice-presidents. They are David N. Danchak, central engineering; Robert J. LoFaso, corporate marketing services and support services; John M. Morphy, controller; and Jeffrey H. Waxman, office systems sales. Kevin Ellington has been ap-pointed vice-president of business

development, and James D'Arezzo has been named vice-president of corporate communications at Com-

paq Computer Corp.

Peter A. Chiasson has been named vice-president and general manager of the Marketing Division of Computervision Corp.

Dennis D. Elkins has been promoted to vice-president, sales, and Ray A. Wilson has been promoted to vice-president of the Computer Services Group at NCA Corp.

James S. Campbell, former president of Shugart Corp., a Xerox Corp. subsidiary, has been appointed president, chief executive officer and chairman of Fortune Systems Corp.

Larry D. Wickwar has been promoted to vice-president, product development, and Roger M. Lane has been named vice-president, customer service logistics, at Datapoint Corp.

NICKELS & DIMES

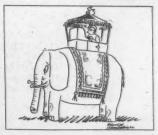

Systematics, Inc. has announced second-quarter revenues of \$18.6 million and net income of \$1.4 million, up 18% and 15%, respectively, over second-quarter last year.

Moody's Investors Service has raised the rating on the senior debt of NCR Corp. from A2 to A1. The change affects approximately \$248 million of debt. Moody's has also assigned a Prime-1 rating to the commercial paper of NCR Credit Corp., a wholly owned NCR Corp. subsidiary.

Software AG Systems, Inc. has reported revenues of \$9.9 million and net income of \$1.3 million, or 21 cents per share, for second fiscal quarter ended Nov. 30, compared with revenues of \$7.2 million and net income of \$370,000, or six cents per share, for the same period last year.

Management Assistance, Inc. has announced revenues of \$376 million for fiscal year 1983 compared with \$358 million for the previous year. Net income was down for the year at \$1 million, or 14 cents per share, compared with \$7.5 million, or 92 cents per share, for 1982.

Moody's Investor Service has lowered its rating on Digital Equip-Continued on page 82

COMPUTER TECHNOLOG

to any grown-up micro or mini you can think of

Better yet, all Wicat systems give you the same mainframe operating system. So you can move up to a whole new level of performance. Without sacrificing one cent of your original software

What's the operating system?

That's your decision. You can have your own MCS, or the indus-try standard UNIX. And we give you all the language com-pilers you could ask for. Nine of

them, at last count.
So if you're ready for a direction that makes a lot more sense, call or write us for complete information. Wicat Systems,

P.O. Box 539, 1875 South State. Orem, UT 84057. (801) 224-6400.

We'll show you how to stay right out there on the leading edge. Without going over it.

rating remains unchanged at Prime1. The action reflects DEC's lower operating profit margins and Moody's
belief that those margins and profitability will remain under pressure
over the intermediate term.

Electronic Data Systems Corp. has reported revenues of \$176.4 million and profits of \$16.8 million for the first quarter of fiscal 1984, up 23% and 24%, respectively, over the same period last year.

IBM has declared a regular quarterly cash dividend of 95 cents per share on common stock payable Dec. 10 to holders of record Nov. 9.

SUPERSHORTS

Wang Laboratories, Inc. has licensed text-to-speech technology from Speech-Plus, Inc. of Mountainview, Calif. The software technology uses 400 letter-to-sound rules and an exceptions dictionary with 3,000 entries to convert serial Ascii English text to immediately intelligible spoken English.

Shand, Morahan & Co. has formed an EDP Risks Department as the result of increasing awareness of loss potential in the computer field. The underwriters in the new department will concentrate solely on data processing risks, including unauthorized computer access coverage, electronic data processing professionals' errors and omissions coverage and the development of other computer-related policies.

Burroughs Corp. and Telex Computer Products, Inc. have announced their intention to form Plasma Graphics Corp., a jointly owned company that will manufacture and market a line of advanced flat panel information displays for use with computers and electronic instruments. Upon completion of definitive agreements, Plasma Graphics will begin operations in the first quarter of this year at a Plainfield, N.J., facility.

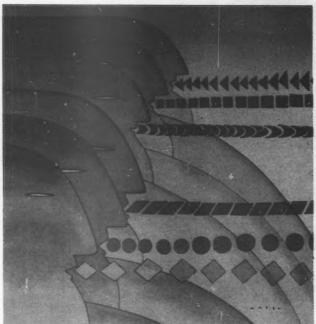

E. F. Hutton, which recently announced the Huttonline financial information service, will offer Quazon Corp.'s Quik-Link 300 terminal to Hutton subscribers on a value-added basis with the Huttonline service. Quazon President Jim Lokey said the terminal offered through Hutton's network of 5,000 brokers will be programmed to permit easy access via automatic logon to the Huttonline service. Hutton clients will be able to order a Quazon terminal directly through their account executives and to charge their purchase directly to their E. F. Hutton accounts.

Sony Corp. of America has formed the Sony Component Products Division "to serve the expanded ... [OEM] market in the United States," according to Kenji Tamiya, president and chief operating officer.

Dartmouth College has signed a contract with Apple Computer, Inc. as part of an overall plan to enable all incoming freshmen to acquire a personal computer at reduced cost by the fall of 1984. According to the agreement, Dartmouth will purchase at least \$2 million in Apple equipment over the next three years, including products not yet on the market.

Wang Laboratories, Inc. has announced that Cobe Corp. of Madison, Wis., has been selected as an independent sales organization, bringing together Wang's computer technology and Cobe's experience in financial institution informational management. Cobe will market its CobeOne financial programs on Wang's 2200 series of computers.

How can you afford to have an office full of computer equipment that can't communicate?

XLAN™ lets your mini and micro computers, along with related peripherals, talk to each other. Regardless of type, brand, or nationality.

Because XLAN is compatible with virtually all kinds of computer equipment, its versatility makes networking easy. Your office is connected with an inexpensive shielded-pair cable. It's economical to install and maintain, and it easily permits network additions or reconfigurations.

XLAN was designed for easy use. And cost-efficient operation. Think of it as a computer party line for sharing information and resources. The simple network from Complexx. XLAN.

Engineering and computer specialists interested in advanced military tactical support programs will find Lockheed's division in Austin, Texas, to be extremely interesting.

Lockheed has formed the division to concentrate on some major tactical support programs. They include command and control and target location systems and are active programs for the Army, Navy and Air Force. For those seeking challenge, immediate openings exist for:

* ATE DESIGN ENGINEERS
Several positions exist for engineers at various
levels to design avionics test programming sets.
A BSEE or equivalent plus 4 years of related
experience are required. Some digital design
concepts and communication theory with
micro-processing-based test equipment
background are desirable. Experience with
EQUATE/ATLAS is a definite plus.

★REAL-TIME SYSTEMS PROGRAMMERS Requires a BS and 4 years experience in Assembly language. Prefer applicants with Rolm 1866/Data General NOVA computers and

★ SOFTWARE SPECIALISTS - Ada Capable of design and development of applica-tions, systems and data communications S/W. Prefer candidates with experience in Ada, graphics display, C³I applications and MIL-SPEC standards.

* RF/MICROWAVE ENGINEERS * RF/MICROWAVE ENGINEERS
Background in R.F. antennas, microwave power
supply design, and computer-aided design and
analysis will assume responsibility for UHF/VHF
data transmission systems on a major program.
Automated bus driven R.F. test equipment experience also destrable. Requires BS and 4
years experience in R.F. system design, analysis
and testing.

* EMC/EMI ENGINEERS
Background in R.F./microwave systems and
digital electronics systems design and analysis.
Will assume responsibility for EMC/EMI and
TEMPEST activity on major program. Requires
BS and 9 years experience in electronic
system/circuit design, analysis and EMC/EMI
testing. Experience in TEMPEST requirement
satisfaction desirable.

★INFRARED (IR)/ELECTRO-OPTICS

ENGINEERS
Positions exist for engineers with a background in IR component/system design, analysis and test. Will assist a major program to develop an IR detection and imaging system. Requires a BS and 4 years related IR/electro-optics system design experience.

*SIGNAL PROCESSING SYSTEMS
ENGINEERS (C*I)
To analyze communications and/or radar
systems performance; develop conceptual
designs and computer simulation tools; and support integration of signal processing algorithm
in major C*I systems. Knowledge of wave form
signature analysis, statistical pattern recognition, algorithm development, technical threats
and mission zcenarios is a must. Educational
background in advanced modulation detection,
estimation theory and aircraft interface design is
desirable.

Lockheed offers unmatched opportunity with plenty of room to grow. And in Austin's pleasant setting, affordable living makes excellent salaries go even further.

Lockheed-Austin's exceptional wage and benefits package includes medical, dental and life insurance. A retirement plan is provided, along with much more.

Qualified candidates should send resumes to: Professional Employment, Dept. 653-0184, P.O. Box 17100, Austin, TX 78760, Lockheed is an equal opportunity, Affirmative Action employer, U.S. citizenship is required.

High Technology Consulting

Look to the FU

SEI's role and reputation continue to grow as one of the nation's leading project-oriented, high technology consulting organizations. SEI consultant teams' skills are in demand to specify and construct sophisticate systems and applications across the country.

SEI looks to the future with a variety of new, challenging, large-scale system development efforts. New SEI projects include industrial automation, advanced microprocessor systems, and support for the emerging cellular telephone industry. These projects, now getting under way, offer you an unparalleled opportunity to be involved in major applications and internals efforts from the ground up.

SEI is seeking first-rate professionals — leaders and technical experts — who also look to the future: Eager to learn, ready to work hard, serious about their careers, interested in the variety and challenge of consulting.

Look to YOUR Future!

DEVELOPMENT MANAGERS \$46,000-\$78,000

Direct the planning, staffing, construction of major mainframe and microprocessor-based development efforts. We're looking for hands-on, technically-oriented managers, who lead from personal, practical experience in the construction of sophisticated systems.

Qualifications:

- Outstanding technical and leadership skills
- Familiarity with System Development and Project Control methods
- Strong background in microprocessor technology or IBM mainframes
- Minimum 8 years relevant experience

Positions in Chicago, New York, Phoenix, and San Francisco

APPLICATION DEVELOPERS \$31,000-\$61,000

Get in on the ground floor of development for a major new support system for the communi-cations industry — Worldwide, Networked, Online — One of the genuinely significant devel-opment projects of the 1980s. Help define the

Qualifications:

- Working knowledge of Structured Analysis and Design
- Familiarity with large scale IBM environments and software: VM/CMS, OS/MVS, CICS, IMS, VSAM
- Minimum 6 years solid, real-world develop-ment experience
- Experience with FOCUS a plus

Positions in Chicago, New York, and Phoenix

TECHNICAL WRITERS \$31,000-\$56,000

At SEI, Technical Writers are contributing consultants, not just editors of other people's drafts. SEI Technical Writers participate in all aspects of major development projects, studies, proposals, document preparation, quality assurance.

- Outstanding writing and editing credentials
- Minimum 4 years experience in programming, system analysis, and design
- Exceptional good sense and broad per-spective on EDP
- College level teaching experience a plus

Positions in Chicago, New York, and Phoenix

BUSINESS ANALYSTS \$38,000-\$61,000

Your job? Determine what systems are actually supposed to DO! Perform requirements analyses, cost-benefit studies, preliminary system designs. Interact directly with top client per-sonnel. Provide ongoing user advocacy and direction to development projects.

- Broad technical skills, including a minimum 4 years experience in programming, system design, and analysis
- Working knowledge of Structured Analysis and Design
- Ability to communicate effectively with a wide range of business and technical people
- Writing/teaching experience a plus

Positions in Chicago, Los Angeles, New York, Phoenix, and San Francisco

MICROPROCESSOR SOFTWARE EXPERTS \$38,000-\$78,000

SEI micro projects are major systems. Participate in the development of leading edge microprocessor-based products. Help establish development environments, port and tailor software, contribute to the development of firmware

Qualifications:

- · Working knowledge of micro-based operating systems, compilers, communications, I/O drivers, Local Area Networks, and software products
- Demonstrated skills in large-scale software development
- Minimum 6 years experience
- Experience with UNIX and 68000 a plus

Positions in Chicago, Los Angeles, Phoenix, and San Francisco

IBM SYSTEM INTERNALS EXPERTS \$46,000-\$78,000

Construct and enhance development and production environments. Participate in custom tailoring, installation, troubleshooting, performance evaluation and tuning, capacity/configuration analysis and planning for systems and communications.

Qualifications:

- In-depth knowledge of IBM mainstream products including: CICS, IMS DB/DC, VM/CMS, OS/MVS, SNA/ACF/NCP/VTAM
- Outstanding assembly language programming skills
- Understanding of the interaction between systems and applications
- Minimum 6 years experience

Positions in Chicago, New York, and Phoenix

SEI offers top salaries, an imaginative personalized benefits package, unlimited opportunity for growth, and the challenge of working alongside other SEI consultants — the best in the business.

THE BUSINESS OF TECHNOLOGY

- An Equal Opportunity Employer M/F -

JOIN A TEAM ON THE LEADING EDGE OF Computer Consoles, Inc.,

designs, manufactures, markets, and services a variety of minicomputer-based fault-tolerant information systems. Located in Rochester, New York, we have all the cultural and educational advantages of a large metropolitan area as well as the ambience and scenic beauty of a small, relaxed town.

CCI currently has opportunities for

GROUP LEADER/DEVELOPMENT SYSTEMS

You will be responsible for software, systems administration, and operations for 32-bit super minis using UNIX* as software development systems.

We prefer a technical degree with a minimum of 5 years' system and/or managerial experience. Knowledge of "C" and UNIX internals a must.

DATA MANAGEMENT SYSTEMS DESIGNER

You will be a member of a team responsible for designing and developing an interactive transaction data management system. This includes an integrated data dictionary, query editor and advanced files access method. A non-procedural commercial application generator and forms manager provide easy-to-use facilities for end-users. The total system is integrated into PERPOS_{TM}, CCI's multi-processor Power 5_{TM} family of systems and office automation products.

We prefer a B.S./M.S. in C.S./E.E. plus 4-5 years' experience in system design and development of data management systems. Experience with UNIX and "C" is highly desirable.

SENIOR SOFTWARE ENGINEER

You will be responsible for the design and development of PERPOSTM, a UNIX-compatible faulttolerant operating system.

We prefer a B.S.C.S. plus 3-5 years' related experience. You must have UNIX, "C", and OS internals experience

SENIOR SYSTEM SPECIALIST

You will be the lead designer and developer of advanced R&D projects that will extend CCI's Power Series of fault-tolerant systems.

An advanced degree with extensive experience in UNIX operating system development are required. Additional experience with other operating systems and hardware system design is highly desirable. "UNIX is a trademark of Bell Labs."

We offer challenging assignments, opportunities for growth, attractive compensation, and a benefits package that includes dental and profit sharing plans. Please send your confidential resume, including salary history and indicating position of interest, to:

Question:

Why should you work at Tandem?

Answer:

Because not just anybody can.

A lot has been written about Tandem's success. We pioneered fault-tolerant computing. Tandem systems offer unparallelled flexibility and networking capability. And our work environment has been cited as an example of corporate excellence.

But we couldn't have come as far as we have without exceptional people. In fact, our revenues have grown 33% in 1983, So, while we are growing rapidly—and have many opportunities for Sales Representatives, Systems Analysts, and Customer Engineers—we're still very selective about who we hire.

What's so special about Tandem People?

Commitment. From the shipping dock to R&D, everyone at Tandem is committed to the ongoing success of the company. And with good reason—everyone shares in the success of the company. One indicator is the fact that over one-third of Tandem stock is held by our employees.

Tandem people are also extremely professional. Our unique, decentralized structure demands people who accept responsibility willingly, because everyone is given a rare degree of autonomy.

If you're looking for a place where your colleagues are highly motivated, dedicated professionals, then you're somebody we'd like to talk to. Apply now for one of these excellent career opportunities with Tandem:

Systems Analysts

We're looking for talented Systems
Analysts to provide pre- and post-sales
support, including sizing and configuration
planning, design analysis, applications design,
benchmarks, and technical presentations.
You will also evaluate user education requirements, and generally plan smooth installations
with our Sales Representatives. Additionally,
we're looking for experienced educators and
design support personnel. These positions
require a minimum of 6 years' applicable
experience, with a thorough knowledge of
one or more of the following: OS internals,
data communications protocols, database
design, or project management in an on-line
environment.

Sales Representatives

We're looking for Sales Representatives to work with customer upper- and executive-level management in FORTUNE 500-sized organizations to sell Tandem systems and aid in their installation. Your commissions will be limited only by your ambition. These outstanding opportunities call for aggressive, professional salespeople with over 5 years' proven ability to sell large business systems.

Customer Engineers

To keep our systems performing flawlessly, Tandem is looking for Customer Engineers to work with cleints. Responsibilities include the installation, maintenance, troubleshooting and repair of Tandem systems, including peripherals and controllers. To qualify, you should have at least 5 years' extensive hardware support experience with large-scale computer systems.

How to apply Western Division

To apply for positions in Northern California, call Janet Heckman at (415) 777-1230, or send your résumé to her attention: Tandem Computers, Inc., 4 Embarcadero Center, Suite 3000, San Francisco, CA 94111.

For positions in all other states west of the Rockies, call Lisa Deutschman at (408) 970-4386 or send your résumé to her attention: Tandem Computers, Inc., 2820 San Tomas Expressway, Santa Clara, CA 95051.

Central Division

Encompassing the entire Midwest as far south as Texas and as far east as Pittsburgh:

Send your résumé to Steve Slesnick, Tandem Computers, Inc., Two Woodfield Lake, 1100 Woodfield Road, Suite 450, Schaumburg, IL 60195; or call (312) 884-6684

Eastern Division

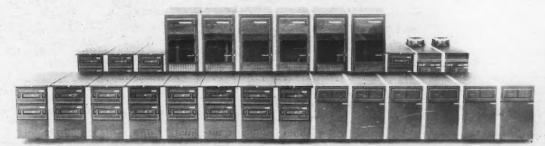

Including the entire Eastern Seaboard and southern states as far west as Mississippi:

Contact Mark Lynch, Tandem Computers, Inc., 12100 Sunrise Valley Drive, Reston, VA 22901.

Tandem is an equal opportunity employer, m/f/h/v.

Principals only, please.

TANDEM

Makers of TXP, the most powerful on-line computer in business today.

*TXP is a trademark of Tandem Computers, Inc.

Cullinet is one of the country's most respected and financially successful computer software companies, with an annual growth rate of better than 50%. BEAIRD-POULAN/WEED EATER DIVISION EMERSON ELECTRIC CO.

Manager of Employment P.O. Box 9329 . Shreveport, La. 71139 An equal opportunity employer.

HAVE A HAPPY NEW YEAR

1983 was a year filled with accomplishments at Northrop Data Processing. We completed a major reorganization along divisional lines to enhance our responsiveness to a wide variety of needs. New Data Centers utilizing IBM's latest mainframes and operating systems were established. We introduced our first Information Service Center at the Aircraft Division and provided continued support to Engineering, Manufacturing and Financial functions

1983 was a big year. As a service organization we can't rest on the success of last year. We must continue evaluating future needs and plan accordingly.

1984 promises to be a year of continued growth for both the divisions we' service and ourselves. We will continue applications programming support to a full range of functional organizations and take on new challenges. In 1984, we will create additional Information Service Centers and establish the Applications Development Center as an aid to programmers. Continuing improvements to our network systems will include integration of personal computers into the framework of software services.

1984 looks like another big year for Northrop's data processing professionals. How does it look for you? If you don't see diversified challenge, success and reward coming with the new year, perhaps you should consider our broad range of opportunities.

- Software Project/Product Management
- Computer Systems Planning
 Operating Systems Software Support including Performance Tuning
- IMS Systems Software & Data Base Administration
- Graphics & Aeroscience Support Programming
- Manufacturing & Financial Applications Programming

If you're experienced in any of these areas, we'll welcome your inquiry. For immediate and confidential consideration, send us your resume and, Happy New Year!

> Mr. Cris Cristina **Engineering & Administrative Staffing** Dept. 1222/80 NA-CW 128305 P.O. Box 2116 Hawthorne, CA 90250

UNIX* Software/"C" Professionals

The most important meeting at UniForum...could be between you and **Bunker Ramo**

We're a leading source of state-of-the-art Information systems for the financial services industry, with a 50-year history services industry, with a Su-year history of producing landmark on-line transaction processing systems. Today, our engineering team is making landmark achievements in the commercial application of UNIX systems with our new generation of products, which combine a 32 bit system architecture with the UNIX constitute output. This mail time multioperating system. This real-time multi-user system along with its sophisticated communications provides the financial services industry with a full range of information services and user friendly applications.

Our large scale product development effort means opportunities for Systems & Software Engineering Professionals. If your background fits any of the open-ings below, see us at the UniForum Winter Conference. There our technical managers and engineers will be showing off our systems and talking about careers. Your visit could begin a bright new future.

Software Product Development

Design and implement "C" language software products for our Motorola M68000/UNIX systems and intellegent clustered workstations. Applications range from distributed transaction processing to office automation.

System Software Development

Specification, design and implementa-tion of UNIX software kernel enhancements and modifications. Operating system performance analysis

Communication Software Development

Design and develop software related to

device emulation projects (SNA, SDLC, X.25, Bisync) and local area networking.

QA engineering for real-time multi-user UNIX software applications written in "C", including network test, SNA.X.25, SDLC, Bisync. Also "C" and UNIX software programmers for productivity and test tool development.

Software Instruction

To develop state-of-the-art courses in microcomputer languages and operating systems. In-house or at customer site, these courses are in high professional demand in this explosive field.

Our engineering staff has access to highly productive development tools (VAX 11/780 UNIX HP64000 Development Systems) and sophisticated

laboratory facilities at our modern Trumbull. Connecticut Headquarters-a prime educational and cultural area approx imately 60 miles from New York City.

Join us at UniForum Jan.17,18,19,(Tues., Wed., Thurs.)

See us at Booth 12 (on the Terrace level) or stop by our Hospitality Suite between 4PM & 9PM at the Washington Hilton.

If unable to see us at UniForum and are intreasted in the opportunities we have available, please forward a resume to Steve Mooney—or call him collect.

When you lease equipment, make sure it comes with a good name behind it.

With the rapidly changing and improving technology of your industry, it's not always easy to keep your company's system up to date. And it's important to make sure you get the best advice, the best service, and the best financing available.

At Greyhound Computer Corporation, we've been leasing, servicing, refurbishing, maintaining and providing financing for computer and other equipment for over 20 years. And we have the resources and the knowledge to help you customize your equipment-leasing requirements. We can also assist you with the financing.

you with the financing.

Whether you want to lease or purchase your equipment, look for the name with the kind of strength you need behind it: Greyhound.

TERM LEASES

WANG PROCESSORS AT THOUSANDS OFF!

HOW TO SAVE N A 3083

for over \$92,000 per month from Randolph—for less than \$62,000 per month. That adds up to savings of \$1,440,000 over a four-year lease period. If you're renting an older machine, Randolph may save you even more—and you'll get about four times the throughput in the bargain.

WHEN IS THE BEST TIME TO TALK TO RANDOLPH **ABOUT LEASING A 3083?**

Now-because Randolph has 3083's available for 4th quarter delivery. But it's never too late, even if you already have a machine installed. Whatever your situation, we can tailor a lease that will fit your exact needs and let you start saving money right away.

TALK TO RANDOLPH NOW.

We can solve problems like these, and

Stuck with a lease on your old machine? We'll sublease it, and provide a new

lease on a 3083. Own a 3083 but need cash?

Sell your machine to Randolph, and we'll lease it back to you. Machine installed on a rental basis? We'll show you how to end the lease and install a new 3083. Any termination charges can be folded

into your new Randolph 3083 lease.

LEASING COMPUTERS IS OUR ONLY BUSINESS.

At Randolph, our people have an average of 18 years in the DP industry from 360's to 3081's. They know all about alternative financing to be sure. but they also know their way around a DP department and the hardware in it.

WE LEASE MORE THAN 3083's.

Whatever your needs, now is the time to talk to Randolph. We provide leases for IBM 303X, 4300 and 3081 systems and peripherals-disks, tapes-as well

UNIQUE FINANCIAL STABILITY.

We're an important part of one of the nation's oldest and leading financial institutions . . . The First National Bank of Boston. 19 years in computer leasing gives added assurance that Randolph will continue as the leader in the computer leasing industry . . . continue to live up to the terms and conditions of our agreements . . . provide upgrades . . . fulfill all of our commitments.

LET RANDOLPH HELP YOU SAVE \$30,000 PER MONTH.

We can solve a lot of problems for you, and save you money, too. Talk to Randolph now . . . call Joseph B. Kelly, Jr., Executive Vice President, 800-243-5307

SERIES/1 SPECIALISTS

Software Tools for VAX/VMS

Make more of your VAX with packages from Evans Griffiths & Hart, Inc.

- ROSS/V, a RSTS/E subsystem for VAX/VMS written in VAX-11 MACRO. RSTS/E monitor calls are performed in VAX native mode: the rest of your PDP-11 code (run-time systems, TKB, applications, etc.) is performed directly in the PDP-11 microcode that's present in every VAX. ROSS/V provides the quickest way to migrate from RSTS/E to the VAX and a convenient way to do RSTS/E development on your VAX. While some VAX users are working in native mode, others are simultaneously working under ROSS/V's RSTS/E subsystem Supports an extensive subset of RSTS/E monitor calls. Provides most of the standard RSTS/E features, like CCLs. send/receive, and RSTS/E-style file update mode, (ROSS/V is also distributed by Online Data Processing, Inc.1
- KDSS, a complete multi-terminal key-to-disk data entry subsystem. Eliminates the need for keypunching and stand-alone key-to-disk systems. (Also available for RSTS/E and RSY-11M1
- TAM, an efficient multi-terminal screen-handling facility that provides complete support for the development of transaction-processing applications on a wide variety of terminals. (Also available for RSTS/E and RSX-11M.)
- . VSORT, a powerful sort that is very much faster than SORT32. Sorts sequential and relative span and nospan files.
- VSELECT, an extremely fast package for scanning RMS files to extract and reformat records that meet user-specified selection criteria. Use VSELECT and VSORT to reduce the number of secondary keys you need in indexed files: you can select records from an indexed file and sort them in less time than it takes to run CONVERT on the file.
- . BSC/DV, a VMS device driver for the DEC DVII synchronous multiplexer. Suitable for handling a wide variety of bisynchronous protocols. (Also available for RSTS/E.)

Call or write for complete descriptions of features and benefits.

The man who taught financial software to A.B. Dick, Alberto Culver, Hershey Foods, Hartz Mountain, Howard Johnsons, Newsweek, National Steel, Philip Morris, Parker Pen, Pabst, Pillsbury, Pepsi-Cola and Dr Pepper.

He's Alan Rick, a McCormack & Dodge training instructor. A member of a teaching team which has won the reputation, hands-down, for the best hands-on training in the financial software industry.

Clients find our training schools as valuable as our software packages. Enrollment has grown from less than 300 in 1977 to over 3,000 in 1981. People have come from more than 150 Fortune 500 companies. From departments with such demanding workloads that any system but the fastest and most powerful is simply out of the question. Whether it's for accounts payable, capital projects analysis, fixed assets, general ledger, payroll/personnel or purchase order management.

At McCormack & Dodge, we work hard to make our schools—and our entire company—as user-oriented

as the software we design. The usual result is that people who sit down and talk to us do more than just talk. They become customers. We'd like to show you why.

Tomorrow's software today.

- ☐ General Ledger
- ☐ Payroll/Personnel
- ☐ Accounts Payable
- ☐ Purchase Order Management
- ☐ Fixed Asset Accounting ☐ Capital Project Analysis
